Theory and Problems of PRINCIPLES OF ACCOUNTING I

JOEL J. LERNER, M.S., P.D.

Former Chairman, Faculty of Business Sullivan County Community College

JAMES A. CASHIN, M.B.A., CPA

Emeritus Professor of Accounting Hofstra University

Schaum's Outline Series

McGRAW-HILL

New York San Francisco Washington, D.C. Auckland Bogotá Caracas Lisbon London Madrid Mexico City Milan Montreal New Delhi San Juan Singapore Sydney Tokyo Toronto JOEL LERNER is a retired Professor and former Chairman of the Business Division at Sullivan County Community College, Loch Sheldrake, New York. He received his B.S. from New York University and his M.S. and P.D. from Columbia University. He has coauthored the Schaum's Outlines of *Principles of Accounting II* and *Business Mathematics* and is the sole author of *Bookeeping and Accounting* and McGraw-Hill's publication of *Financial Planning for the Utterly Confused*, now in its fifth edition. Professor Lerner is also a financial lecturer to several Fortune 500 firms, has produced his own TV and radio series for fifteen years, and addresses thousands of people annually on finances.

JAMES A. CASHIN was Emeritus Professor of Accounting at Hofstra University, where he was formerly Chairman of the Accounting Department. He was a coauthor of several accounting textbooks, of the Schaum's Outlines of *Principles of Accounting II* and *Cost Accounting*, and he was Editor-in-Chief of the *Handbook for Auditors*. Professor Cashin was a Certified Public Accountant and a Certified Internal Auditor. He held a B.S. degree in Accounting from the University of Georgia and an M.B.A. from New York University. He taught in the Graduate School of City University of New York and New York University.

The fifth edition of *Principles of Accounting I* brings to the study of accounting the same solved-problems approach which has proved so successful in the disciplines of engineering and mathematics. In contrast to previous supplementary materials, which have been little more than summary textbooks, the Schaum's Outline Series in Accounting is organized around the practical application of basic accounting concepts. By providing the student with

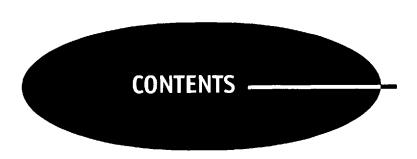

- 1. Concise definitions and explanations, in easily understood terms
- 2. Fully worked-out solutions to a large range of problems (against which the student can check his or her own solutions)
- 3. Review questions
- 4. Sample examinations typical of those used by two-year and four-year colleges

these books help the student to develop the all-important know-how for solving problems—on the CPA examination and in professional practice.

Principles of Accounting I and its sequel, Principles of Accounting II, parallel the full-year introductory course offered in most colleges and universities. Subject matter in this newly revised edition has been carefully coordinated with the leading textbooks, so that any topic can easily be found from the table of contents or the index. In addition, this book should prove a valuable supplement to other accounting courses and to individual study. Today, there are an increasing number of programs offering college credit by examination, such as the College Level Examination Program (CLEP) and the New York College Proficiency Examination. Advanced placement, too, is now possible. People who may have taken introductory accounting some years ago will find much-needed aid in brushing up for the next course

Accounting Concepts

1.1 NATURE OF ACCOUNTING

Every element of society—from the individual to an entire industry or government branch—has to make decisions on how to allocate its resources. Accounting is the process that aids these decisions by (1) recording, (2) classifying, (3) summarizing, and (4) reporting business transactions and interpreting their effects on the affairs of the business entity. This definition makes it clear that the recording of data, or bookkeeping, is only the first and simplest step in the accounting process.

1.2 BASIC ELEMENTS OF FINANCIAL POSITION: THE ACCOUNTING EQUATION

The financial condition or position of a business enterprise is represented by the relationship of assets to liabilities and capital.

Assets. Properties used in business that are owned and have monetary value; for instance, cash, inventory, buildings, equipment.

Liabilities. Amounts owed to outsiders, such as notes payable, accounts payable, bonds payable. These are known as claims to creditors. Liabilities may also include certain deferred items, such as income taxes to be allocated.

Owner's Equity. The interest of the owners in an enterprise.

These three basic elements are connected by a fundamental relationship called the accounting equation. This equation expresses the equality of the assets on one side with the claims of the creditors and owners on the other side:

Assets = Liabilities + Owner's Equity

According to the accounting equation, a firm is assumed to possess its assets subject to the rights of the creditors and owners.

EXAMPLE 1

Assume that a business owned assets of \$100,000, owed creditors \$70,000, and owed the owner \$30,000. The accounting equation would be

Assets = **Liabilities** + **Owner's Equity** \$100,000 = \$70,000 + \$30,000

If over a certain period the firm had a net income of \$10,000, the equation would then be

We shall call any business event that alters the amount of assets, liabilities, or owner's equity a transaction. In Example 1, the net changes in asset groups were discussed; in Example 2, we show how the accountant makes a meaningful record of a series of transactions, reconciling them step by step with the accounting equation.

EXAMPLE 2

During the month of January, Mr. Alan Bagon, lawyer,

- 1. Invested \$5,000 to open his law practice
- 2. Bought supplies (stationery, forms, pencils, etc.) for cash, \$300
- 3. Bought office equipment from Altway Furniture Company on account, \$2,500
- 4. Received \$2,000 in fees earned during the month
- 5. Paid office rent for January, \$500
- 6. Paid salary for part-time help, \$200
- 7. Paid \$1,000 to Altway Furniture Company on account
- 8. After taking an inventory at the end of the month, found that he had used \$200 worth of supplies
- 9. Withdrew \$300 for personal use

These transactions might be analyzed and recorded as follows:

Transaction (1). Mr Bagon invested \$5,000 to open his law practice. There are two accounts that are affected: The asset Cash is increased, and the capital of the firm is increased by the same amount.

| | Assets | = | Liabilities | + | Owner's Equity |
|--------------|--------|---|-------------|---|-------------------|
| Cash | | | | | A. Bagon, Capital |
| (1) +\$5,000 | | = | | | +\$5,000 |

Transaction (2). Bought supplies for cash, \$300. In this case, Mr. Bagon is substituting one asset for another: He is receiving (+) the asset Supplies and paying out (-) the asset Cash. Note that the capital of \$5,000 remains unchanged, but there is still equality.

| | | | Assets | = | Liabilities | + | Owner's Equity |
|-----|-----------------------|---|----------|---|-------------|---|--|
| | Cash \$5,000 | + | Supplies | | | | A. Bagon, Capital \$5,000 |
| (2) | $\frac{-300}{24.700}$ | | +\$300 | | | | ************************************* |
| | \$4,700 | + | \$300 | = | | | \$5,000 |

Transaction (3). Bought office equipment from Altway Furniture Company on account, \$2,500. He is receiving the asset Equipment but is not paying for it with the asset Cash. Instead, he will owe the money to the Altway Furniture Company. Therefore, he is liable for this amount in the future, thus creating the liability Accounts Payable.

| | | | Assets | | | = | Liabilities | + | Owner's Equity |
|-----|---------|---|----------|---|-----------|---|------------------|---|-------------------|
| | Cash | + | Supplies | + | Equipment | | Accounts Payable | | A. Bagon, Capital |
| | \$4,700 | | \$300 | | | | | | \$5,000 |
| (3) | | | | | +\$2,500 | | +\$2,500 | | |
| | \$4,700 | + | \$300 | + | \$2,500 | = | \$2,500 | + | \$5,000 |

Transaction (4). Received \$2,000 in fees earned during the month. Because he received \$2,000, the asset Cash increased and also his capital increased. It is important to note that he labels the \$2,000 Fees Income to show its origin. This is known as Revenue or Income.

| | | Assets | | = | Liabilities | + | Owner's Equity |
|-----|-----------|------------|-------------|---|------------------|---|--------------------|
| | Cash + | Supplies - | + Equipment | | Accounts Payable | | A. Bagon, Capital |
| | \$4,700 | \$300 | \$2,500 | | \$2,500 | | \$5,000 |
| (4) | +2,000 | | | | | | +2,000 Fees Income |
| | \$6,700 + | | + \$2,500 | = | \$2,500 | + | \$7,000 |

Transaction (5). Paid office rent for January, \$500. When the word "paid" is stated, you know that it means a deduction from Cash, since he is paying *out* his asset Cash. Payment of expense is a reduction of capital. It is termed *Rent Expense*.

| | | | Assets | | | = | Liabilities | + | Ow | ner's Equity |
|-----|---------|---|----------|---|-----------|---|------------------|---|---------|---------------|
| | Cash | + | Supplies | + | Equipment | | Accounts Payable | | A. B | agon, Capital |
| | \$6,700 | | \$300 | | \$2,500 | | \$2,500 | | \$7,000 | |
| (5) | -500 | | | | | | | | _500 | Rent Expense |
| | \$6,200 | + | \$300 | + | \$2,500 | = | \$2,500 | + | \$6,500 | |

Transaction (6). Paid salary for part-time help, \$200. Again the word "paid" means a deduction of cash and a reduction in capital. This time it refers to Salaries Expense.

| | | | Assets | | | = | Liabilities | + | Owner's Equity |
|-----|---------|---|----------|---|-----------|---|------------------|---|-------------------|
| | Cash | + | Supplies | + | Equipment | | Accounts Payable | | A. Bagon, Capital |
| | \$6,200 | | \$300 | | \$2,500 | | \$2,500 | | \$6,500 |
| (6) | 200 | | | | | | | | Salaries Expense |
| | \$6,000 | + | \$300 | + | \$2,500 | = | \$2,500 | + | \$6,300 |

Transaction (7). Paid \$1,000 to Altway Furniture Company on account. Here Mr. Bagon is reducing the asset Cash because he is paying \$1,000, and reducing the liability Accounts Payable. He will now owe \$1,000 less.

| | | | Assets | | | = | Liabilities | + | Owner's Equity |
|-----|---------|---|----------|---|-----------|---|------------------|---|-------------------|
| | Cash | + | Supplies | + | Equipment | | Accounts Payable | | A. Bagon, Capital |
| | \$6,000 | | \$300 | | \$2,500 | | \$2,500 | | \$6,300 |
| (7) | -1,000 | | | | | | -1,000 | | |
| | \$5,000 | + | \$300 | + | \$2,500 | = | \$1,500 | + | \$6,300 |

Transaction (8). After taking an inventory at the end of the month, Mr. Bagon found that he had used \$200 worth of supplies. The original amount of supplies purchased has been reduced to the amount that was found to be left at the end of the month. Therefore, the difference was the amount used (\$300 - \$100 = \$200). This reduces the asset Supplies by \$200, and reduces his Capital by the same amount. It is termed Supplies Expense.

| | | | Assets | | | = | Liabilities | + | Owner's Equity |
|-----|---------|---|-------------|---|-----------|---|------------------|---|-----------------------|
| | Cash | + | Supplies | + | Equipment | | Accounts Payable | | A. Bagon, Capital |
| | \$5,000 | | \$300 | | \$2,500 | | \$1,500 | | \$6,300 |
| (8) | | | <u>-200</u> | | | | | | -200 Supplies Expense |
| | \$5,000 | + | \$100 | + | \$2,500 | = | \$1,500 | + | \$6,100 |

Transaction (9). Withdrew \$300 for personal use. The withdrawal of cash is a reduction not only in Mr. Bagon's cash position but also in his capital. This is not an expense but a personal withdrawal, a reduction of the amount invested.

| | | | Assets | | | = | Liabilities | + | Owner's Equity |
|-----|---------|---|----------|---|-----------|-----|------------------|---|-------------------|
| | Cash | + | Supplies | + | Equipment | | Accounts Payable | | A. Bagon, Capital |
| | \$5,000 | | \$100 | | \$2,500 | | \$1,500 | | \$6,100 |
| (9) | 300 | | | | | | | | -300 Drawing |
| | \$4,700 | + | \$100 | + | \$2,500 | === | \$1,500 | + | \$5,800 |

| own | wers: 1. recording, classifying, summarizing, reporting; 2. assets, liabilities, owner's equity; 3. assets; 4. er's equity; 5. liability; 6. owner's equity; 7. transactions; 8. assets, owner's equity; 9. liability; 10. Cash, ounts Payable; 11. owner's equity; 12. capital |

Solved Problems

- 1.1. What effect do the transactions below have on the owner's equity (capital)?
 - (a) Fran Johnson invested \$5,000 in the business.
 - (b) She bought equipment on account, \$2,400.
 - (c) She paid half of the bill owed to the creditor.
 - (d) She received \$2,000 in fees.
 - (e) She paid salaries for the week, \$800.
 - (f) She withdrew \$400 from the business.
 - (g) She paid rent for the month, \$900.
 - (h) Inventory of supplies decreased \$350 during the month.

SOLUTION

(a) increase (c) no effect (e) decrease (g) decrease (b) no effect (d) increase (f) decrease (h) decrease

1.2. Compute the amount of the missing element:

| | Assets | Liabilities | Owner's Equity |
|-----|----------|-------------|----------------|
| (a) | \$24,000 | \$19,000 | ? |
| (b) | \$16,500 | ? | \$12,300 |
| (c) | ? | \$2,700 | \$14,000 |
| (d) | \$15,665 | \$9,406 | ? |

SOLUTION

- (a) \$5,000 (\$24,000 \$19,000) (b) \$4,200 (\$16,500 - \$12,300) (c) \$16,700 (\$2,700 + \$14,000) (d) \$6,259 (\$15,665 - \$9,406)
- **1.3.** Transactions completed by J. Epstein, M.D., appear below. Indicate increase (+), decrease (-), or no change (0) in the accompanying table.

| | Assets = Liabilities + Owner's Equity |
|--|---------------------------------------|
| (a) Paid rent expense for month | |
| (b) Paid biweekly salary for lab assistant | |
| (c) Cash fees collected for the week | |
| (d) Bought medical equipment, paying cash | |
| (e) Bought equipment on account | |
| (f) Paid a creditor (liability) money owed | |

SOLUTION

| | Assets | = Liabilities - | + Owner's Equity |
|---|--------|-----------------|------------------|
| (a) (reduction of cash and capital) | | 0 | - |
| (b) (reduction of cash and capital) | | 0 | _ |
| (c) (increase in cash and capital) | + | 0 | + |
| (d) (increase in equipment, reduction in cash) | + ~ | 0 | 0 |
| (e) (increase in equipment and in accounts payable) | + | + | 0 |
| (f) (decrease in cash and in accounts payable) | | _ | 0 |

1.4. Mr. Allen begins business, investing \$4,000 in cash, equipment valued at \$12,000, and \$1,000 worth of supplies. What is the equity of the firm?

SOLUTION

Mr. Allen's Owner's Equity is \$17,000, the total of all his assets less his liabilities (0).

1.5. If Mr. Allen had included a \$6,000 note payable (written liability), in Prob. 1.4, what would then have been his Owner's Equity?

Assets = Liabilities + Owner's Equity
$$$17,000 = $6,000 + $11,000$$

The total assets of \$17,000, reduced by liabilities of \$6,000, results in \$11,000 owner's equity. Stated a different way:

1.6. Supplies had a balance of \$2,400 at the beginning of the year. At the end of the period, its inventory showed \$1,400. How is this decrease recorded?

SOLUTION

Assets = Liabilities + Owner's Equity
Supplies
$$\begin{array}{ccc} \$2,400 & \$2,400 \\ -1,000 & -1,000 \\ \$1,400 & \$1,400 \end{array}$$
Supplies Expense

1.7. • Illustrate the difference between Supplies and Supplies Expense.

SOLUTION

Supplies is an asset and represents the value of supplies owned (supplies on hand). Supplies Expense is the value of supplies used during the period and is a reduction of capital.

| Supplies (asset) | \$2,400 | (beginning) |
|------------------|---------|--------------------|
| Supplies Expense | -1,000 | (used during year) |
| Supplies (asset) | \$1,400 | (end) |

The value of supplies at the end of the period is the difference between the beginning balance and the amount that has been used.

- **1.8.** The Supplies account had a balance of \$3,850 at the beginning of January. At the end of the month, it was discovered that \$1,425 remained.
 - (a) What was the Supplies Expense for the month?
 - (b) What was the balance of the asset Supplies?

SOLUTION

- (b) \$1,425. This is the amount that remains at the end of the month and is considered an asset.
- 1.9. The Supplies account had a balance of \$3,850 at the beginning of January. At the end of the month, it was discovered that \$1,425 had been used.
 - (a) What was the Supplies Expense for the month?
 - (b) What was the balance of the asset, Supplies?

(a) \$1,425. This is the amount that has been used.

1.10. Record the following transaction in the space provided: Bought equipment for \$22,000, paying \$6,000 in cash and owing the balance.

SOLUTION

- 1. Reduce the Cash account by the amount paid, \$6,000.
- 2. Record the purchase of the equipment at its cost, \$22,000.
- 3. Increase Accounts Payable for the amount owed, \$16,000.

| | | Ass | ets | = | Liabilities | + | Owner's Equity |
|---------|----------|-----|-----------|---|------------------|---|----------------|
| | Cash | + | Equipment | = | Accounts Payable | + | Capital |
| Balance | \$30,000 | | | | | | \$30,000 |
| Entry | -6,000 | | +\$22,000 | | +\$16,000* | | |
| Balance | \$24,000 | + | \$22,000 | = | \$16,000 | + | \$30,000 |
| | | | | | | | |
| | | | | | | | |

^{*\$22,000 (}equipment)

1.11. Based on the information in Prob. 1.10, what effect does the purchase of the equipment on account have on capital?

SOLUTION

No effect.

| | Assets | | | = | Liabilities | + | Owner's Equity | |
|---------|----------|---|-----------|---|------------------|---|----------------|--|
| | Cash | + | Equipment | = | Accounts Payable | + | Capital | |
| Balance | \$30,000 | | | | | | \$30,000 | |
| Entry | -6,000 | | +\$22,000 | | +\$16,000 | | | |
| Balance | \$24,000 | + | \$22,000 | = | \$16,000 | + | \$30,000 | |

Note that the capital before and after the transaction remains the same. The only areas that are affected are assets and liabilities.

1.12. In Prob. 1.10, what effect does the payment of the liability in full have on the capital account?

^{-6,000 (}paid in cash)

^{\$16,000 (}balance owed)

No effect.

| | | Ass | ets | - | Liabilities | + | Owner's Equity | |
|---------|----------|-----|-----------|---|------------------|---|----------------|--|
| | Cash | + | Equipment | = | Accounts Payable | + | Capital | |
| Balance | \$24,000 | | \$22,000 | | \$16,000 | | \$30,000 | |
| Entry | -16,000 | | | | 16,000 | | | |
| Balance | \$8,000 | + | \$22,000 | = | | | \$30,000 | |

The reduction of cash is accompanied by an equal reduction of the accounts payable.

1.13. The summary data of the Buntz Taxi Company for May are presented below in equation form. Describe each of the transactions that occurred during the month.

| | | A | Assets | = Liabilities | | | Owner's | Equity | |
|-----|----------|------------|---------------|---------------|------------------|---|----------|------------------|--|
| | Cash | + Supplies | s + Equipment | = | Accounts Payable | + | Capital | | |
| (1) | +\$6,600 | | | | | | +\$6,600 | Investment | |
| (2) | -3,200 | | +\$3,200 | | | | | | |
| (3) | -500 | +\$500 | | | | | | | |
| (4) | | | +2,000 | | +\$2,000 | | | | |
| (5) | +2,500 | | | | | | +2,500 | Fares Income | |
| (6) | -1,100 | | | | | | -1,100 | Salaries Expense | |
| (7) | -500 | | | | -500 | | | | |
| (8) | | | | | | | | Drawing | |
| | \$3,500 | + \$500 | + \$5,200 | | <u>\$1,500</u> | + | \$7,700 | | |

SOLUTION

- (1) An investment was made by the owner.
- (2) Equipment was bought and paid for.
- (3) Supplies were bought and paid for.
- (4) Additional equipment was bought on account, thus creating the liability.
- (5) Income from taxi fares was recorded.
- (6) Salaries were paid to the company's drivers.
- (7) Cash was paid to reduce the amount owed.
- (8) Owner withdrew funds for his personal use.
- **1.14.** Determine what accounts are affected, by how much, and if it is an increase (+), decrease (-), or there is no effect (0).
 - Nov. 5 Invested \$7,000 cash and \$400 of supplies into the business
 - 7 Received \$4,200 for services rendered
 - 9 Purchased equipment on account, \$3,700
 - 11 Paid \$750 for supplies
 - 14 Paid salaries, \$2,100
 - 16 Paid \$3,500 for land
 - 17 Paid \$2,000 on account from Nov. 9 transaction
 - 19 Paid utilities, \$200
 - 20 Paid \$300 for supplies and \$700 for equipment

- 21 Received \$4,700 for services rendered
- 25 Withdrew \$2,000 cash for personal use
- 30 Inventory of supplies showed \$600 of supplies on hand

Record the effect of each transaction in the following table:

| | Cash | Supplies | Equipment | Land | Accounts Payable | Capital |
|--------|------|----------|-----------|------|---------------------|---------|
| Nov. 5 | | | | | | |
| 7 | | | | | | |
| 9 | | | | | | |

- 1.15. On June 1, Bob Friedland started his lawn care service. Listed below are the transactions for the month of June. Record the transactions on the blank form which follows.
 - June 1 Invested \$2,200 cash and equipment with a book value of \$3,500
 - 5 Received \$375 for lawn care service
 - 7 Received \$1,100 for lawn care service
 - 11 Purchased equipment for \$2,000, paying \$1,000 cash and giving a note for \$1,000 for the remainder
 - 15 Paid gas bill, \$275
 - 19 Withdrew \$200 cash for personal use
 - 21 Purchased supplies for \$100 on account
 - 25 Paid \$400 on outstanding note (see June 11 transaction)
 - 30 Received \$925 for lawn care service

1.16. The following transactions were engaged in during the month of March by Dr. Scott Braunstein:

- (1) Opened his practice by investing \$50,000 in the business
- (2) Bought office equipment for \$27,000 on account from Medical Products, Inc.
- (3) Paid \$2,000 for various medical supplies for the office
- (4) Received \$11,600 in fees earned during the first month of operations
- (5) Paid office rent for the month, \$900
- (6) Paid medical assistant salary for the month, \$1,800
- (7) Paid Medical Products, Inc., \$3,000 on account
- (8) Withdrew \$1,500 for personal use

Enter each transaction in the following form:

| | | | A | sset | ts | = | Liabilities | + | Owner's Equity |
|-----------------------|------|---|----------|------|-------------|---|---------------------|---|----------------|

1.19 Rocco Burday operates a shoe repair shop known as the Repair Center. The balances of his accounts on June 1 of the current year were as follows:

| Cash | \$5,400 |
|------------------|---------|
| Supplies | 600 |
| Equipment | 3,200 |
| Accounts Payable | 3,000 |
| Capital | 6,200 |

The transactions during the month of June appear below.

- (1) Paid salaries of \$350
- (2) Paid creditors on account \$2,000
- (3) Bought additional equipment on account for \$3,100
- (4) Received cash from customers for repair service, \$3,600
- (5) Paid delivery expense, \$140
- (6) Inventory of supplies at the end of the month was \$275
- (7) Mr. Burday withdrew for his personal use \$250

Record the transactions in the form provided.

| | | | | Ass | ets | = | | + | Owner's Equity |
|---------------------------|---------|---|----------|-----|-----------|---|---------------------|---|-----------------------|

| (4) | +3,600 | | | | | | | | +3,600 | Repair Income |
| Balance | \$6,650 | + | \$600 | + | \$6,300 | = | \$4,100 | + | \$9,450 | - |
| (5) | 140 | | | | | | | | -140 | Delivery Expense |
| Balance | \$6,510 | + | \$600 | + | \$6,300 | = | \$4,100 | + | \$9,310 | |
| (6) | | | -325* | | | | | | -325 | Supplies Expense |
| Balance | \$6,510 | + | \$275 | + | \$6,300 | = | \$4,100 | + | \$8,985 | |
| (7) | -250 | | | | | | . , | | -250 | Drawing |
| Balance, | | | | | | | | | | Ũ |
| June 30 | \$6,260 | + | \$275 | + | \$6,300 | = | \$4,100 | + | \$8,735 | |

^{*\$600 (}beginning inventory) - \$275 (ending inventory) = \$325 (amount used, or supplies expense).

Financial Statements

2.1 INTRODUCTION

The two principal questions that the owner of a business asks periodically are:

- (1) What is my net income (profit)?
- (2) What is my equity?

The simple balance of assets against liabilities and owner's equity, provided by the accounting equation, is insufficient to give complete answers. For (1) we must know the type and amount of income and the type and amount of each expense for the period in question. For (2) it is necessary to obtain the type and amount of each asset, liability, and owner's equity account at the end of the period. This information is provided by (1) the *income statement* and (2) the *balance sheet*.

EXAMPLE 1

After the transactions for the month of January have been recorded in the books of Mr. Alan Bagon (see Example 2 in Chap. 1), the accounts show the following balances:

| Accounts | Assets | Liabilities and Owner's Equity |
|-------------------|---------|--------------------------------|
| Cash | \$4,700 | |
| Supplies | 100 | |
| Equipment | 2,500 | |
| Accounts Payable | | \$1,500 |
| A. Bagon, Capital | | 5,800 |
| Total | \$7,300 | \$7,300 |
| | | |

It can be seen that the assets of the business changed from the original \$5,000 invested by Mr. Bagon at the beginning of January to \$7,300 at the end of January. Does that represent the amount of profit earned? It does not, because (1) liabilities have changed and (2) some of the transactions affecting capital were related to his investment; that is, he withdrew some of his original investment. It is apparent that his liabilities increased: They are now \$1,500 more than the beginning liabilities (the balance due on the equipment).

His net assets or his capital is now \$5,800, an increase of \$800 over the beginning amount. That would represent his profit if he had not withdrawn some of his investment.

2.2 FINANCIAL STATEMENTS

(A) The Income Statement

The income statement may be defined as a summary of the revenue, expenses, and net income or net loss of a business entity for a specific period of time. This may also be called a profit and loss

statement, operating statement, or statement of operations. Let us review the meanings of the elements entering into the income statement.

Revenue. The increase in capital resulting from the sale of goods or rendering of services by the business. In amount, the revenue is equal to the cash and receivables gained in compensation for the goods sold or services rendered.

Expenses. The decrease in capital caused by the business's revenue-producing operations. In amount, the expense is equal to the value of goods and services used up or consumed in obtaining revenue.

Net income. The increase in capital resulting from profitable operation of a business. It is the excess of revenues over expenses for the accounting period.

Net loss. The decrease in capital resulting from the operations of a business. It is the excess of expenses over revenue for the accounting period.

It is important to note that a cash receipt qualifies as revenue only if it serves to increase capital. Thus, for instance, borrowing cash from a bank does not contribute to revenue. Similarly, a cash payment is an expense only if it decreases capital.

EXAMPLE 2

Mr. A. Bagon's total January income and the totals for his various expenses can be obtained by analyzing the transactions shown under the heading "A. Bagon, Capital" in Example 2, Chap. 1. The income from fees amounted to \$2,000, and the expenses incurred to produce this income were: rent, \$500; salaries, \$200; and supplies, \$200. The formal income statement can now be prepared. Note that the heading of a financial statement answers the questions Who? What? and When? In the situation below, Who? (Alan Bagon), What? (Income Statement), and When? (month of January 19X8) are all answered.

Alan Bagon Income Statement Month of January 19X8

| Fees Income | | \$2,000 |
|--------------------------|-------|---------|
| Operating Expenses | | |
| Rent Expense | \$500 | |
| Salaries Expense | 200 | |
| Supplies Expense | _200 | |
| Total Operating Expenses | | 900 |
| Net Income | | \$1,100 |

In many companies there are hundreds and perhaps thousands of income and expense transactions in one month. To lump all these transactions under one account would be very cumbersome and would, in addition, make it impossible to show relationships among the various items. For example, we might wish to know the relationship of selling expenses to sales and whether the ratio is higher or lower than in previous periods. To solve this problem, we leave the investment or permanent entries in the capital account and then set up a temporary set of income and expense accounts. The net difference of these accounts, the net profit or net loss, is then transferred as one figure to the capital account.

Because an income statement pertains to a definite period of time, it becomes necessary to determine just when an item of revenue or expense is to be accounted for. Under the accrual basis of accounting, revenue is recognized only when earned and expense is recognized only when incurred. This differs significantly from the cash basis of accounting, which recognizes revenue and expense generally with the receipt and payment of cash. Essential to the accrual basis is the matching of expenses with the revenue that they helped produce. Under the accrual system, the accounts are adjusted at the end of the accounting period to properly reflect the revenue earned and the costs and expenses applicable to the period.

Most business firms use the accrual basis, while individuals and professional people generally use the cash basis. Ordinarily the cash basis is not suitable when there are significant amounts of inventories, receivables, and payables.

(B) The Balance Sheet

The information needed for the balance sheet items is the net balances at the end of the period, rather than the total for the period as in the income statement. Thus, management wants to know the balance of cash in the bank and the balance of inventory, equipment, etc., on hand at the end of the period.

The balance sheet may then be defined as a statement showing the assets, liabilities, and owner's equity of a business entity at a specific date. This statement is also called a statement of financial position or statement of financial condition.

In preparing the balance sheet, it is not necessary to make any further analysis of the data. The needed data—that is, the balances of the asset, liability, and owner's equity accounts—are already available.

EXAMPLE 3 Report Form

| Alan | Bag | gon | |
|---------------|-----|------|--|
| Balance Sheet | | | |
| January | 31, | 19X8 | |

| ASSETS | | | |
|--------------------------------------|---------|---------|-------------|
| Cash | | | \$4,700 |
| Supplies | | | 100 |
| Equipment | | | 2,500 |
| Total Assets | | | \$7,300 |
| LIABILITIES AND OWNER'S EQUITY | | | |
| Liabilities | | | |
| Accounts Payable | | | \$1,500 |
| Owner's Equity | | | |
| Balance, January 1, 19X8 | | \$5,000 | |
| Net Income for January | \$1,100 | | |
| Less: Withdrawals | 300 | | |
| Increase in Owner's Equity | | 800 | |
| Total Owner's Equity | | | 5,800 |
| Total Liabilities and Owner's Equity | | | \$7,300 |

The close relationship of the income statement and the balance sheet is apparent. The net income of \$1,100 for January, shown as the final figure on the income statement of Example 2, is also shown as a separate figure on the balance sheet of Example 3. The income statement is thus the connecting link between two balance sheets. As discussed earlier, the income and expense items are actually a further analysis of the Capital account.

The balance sheet of Example 3 is arranged in *report form*, with the liabilities and owner's equity sections shown below the asset section. It may also be arranged in *account form*, with the liabilities and owner's equity sections to the right of, rather than below, the asset section, as shown in Example 4.

EXAMPLE 4 Account Form

Alan Bagon Balance Sheet January 31, 19X8

| ASSETS | | LIABILITIES AND OWNER'S EQUI | ITY | | |
|--------------|---------|--------------------------------------|---------|---------|---------|
| Cash | \$4,700 | Liabilities | | | |
| Supplies | 100 | Accounts Payable | | | \$1,500 |
| Equipment | 2.500 | Owner's Equity | | | |
| | | Balance, January 31, 19X8 | | \$5,000 | |
| | | Net Income for January | \$1,100 | | |
| | | Less: Withdrawals | 300 | | |
| | | Increase in Owner's Equity | | 800 | |
| | | Total Owner's Equity | | | _5,800 |
| Total Assets | \$7,300 | Total Liabilities and Owner's Equity | | | \$7,300 |

(C) The Statement of Owner's Equity

Instead of showing the details of the Capital account in the balance sheet, we may show the changes in a separate form called the Statement of Owner's Equity. This is the more common treatment.

EXAMPLE 5

Alan Bagon Statement of Owner's Equity Month of January 19X8

| Capital, January 1, 19X8 | | \$5,000 |
|---------------------------|---------|---------|
| Add: Net Income | \$1,100 | |
| Less: Drawing | 300 | |
| Increase in Capital | | 800 |
| Capital, January 31, 19X8 | | \$5,800 |

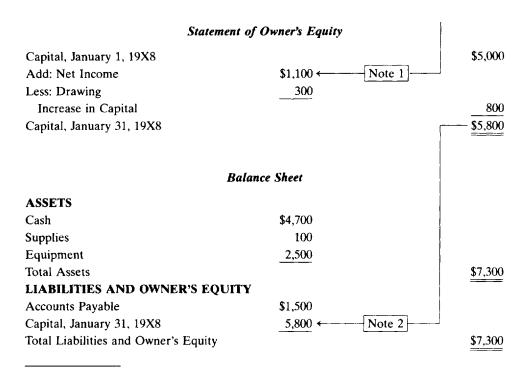

(D) Financial Statement Summary

The three financial statements from Examples 3, 4, and 5 are all interrelated and appear below in Example 6.

EXAMPLE 6

Income Statement

| Fees Income | | \$2,000 |
|------------------|--------|----------------|
| Expenses | | |
| Rent Expense | \$ 500 | |
| Salaries Expense | · 200 | |
| Supplies Expense | 200 | |
| Total Expenses | | 900 |
| Net Income | | <u>\$1,100</u> |

Note 1. The net income from the income statement, \$1,100, is transferred to the statement of owner's equity.

Note 2. The capital is summarized in the statement of owner's equity and the final balance is included in the balance sheet.

2.3 CLASSIFIED FINANCIAL STATEMENTS: THE BALANCE SHEET

Financial statements become more useful when the individual items are classified into significant groups for comparison and financial analysis. The classifications relating to the balance sheet will be discussed in this section, while the classification of the income statement will be shown in Chap. 8.

The balance sheet becomes a more useful statement for comparison and financial analysis if the asset and liability groups are classified. For example, an important index of the financial state of a business, derivable from the classified balance sheet, is the ratio of current assets to current liabilities. This current ratio ought generally to be at least 2:1; that is, current assets should be twice current liabilities. For our purposes we will designate the following classifications.

| Liabilities |
|-------------|
| Current |
| Long-term |
| Contingent |
| |

Assets include the following:

Current assets. Assets reasonably expected to be converted into cash or used in the current operation of the business. (The current period is generally taken as 1 year.) Examples are cash, notes receivable, accounts receivable, inventory, and prepaid expenses (prepaid insurance, prepaid rent, etc.).

Fixed assets. Long-lived assets used in the production of goods or services. These assets, sometimes called *plant assets*, are used in the operation of the business rather than being held for sale, as are inventory items.

Other assets. Various assets other than current assets, fixed assets, or assets to which specific captions are given. For instance, the caption Investments would be used if significant sums were invested. Often companies show a caption for intangible assets such as patents or goodwill. In other cases, there may be a separate caption for deferred charges. If, however, the amounts are not large in relation to total assets, the various items may be grouped under one caption, Other Assets.

Liabilities may be current, long-term, or contingent.

Current Liabilities. There are liabilities that are due for payment within the operating cycle or 1 year, whichever is longer. The settlement of a current liability usually requires the use of current assets. The ratio of current assets to current liabilities, or current ratio, is a useful index of a company's debt-paying capacity. It tells how many times current liabilities could be paid with current assets.

EXAMPLE 8

Current assets = \$70,000
Current liabilities = \$32,000
Current ratio =
$$\frac{\text{current assets}}{\text{current liabilities}} = \frac{70,000}{32,000} = 2.19:1$$

Thus, \$2.19 of current assets is available for every \$1 of current liabilities.

Following are the seven principal types of current liabilities.

- 1. Notes payable. Liabilities evidenced by a written promise to pay at a later date.
- 2. Accounts payable. Liabilities for goods or services purchased on account, trade payables, and also nontrade obligations.
- 3. Accrued liabilities. Liabilities that have accumulated but are not yet due, as payment does not coincide with the end of the period. These are expenses and are shown on the income statement under

Salaries and Wages Payroll Taxes
Commissions Sales Taxes
Insurance Income Taxes
Interest Pensions
Property Taxes Royalties

- 4. Withholdings. Amounts that have been withheld from employees' pay and are to be turned over to government agencies, insurance companies, etc. These are not expenses of the company but must be properly safeguarded until they are transmitted to the specified agency. These include income taxes, social security taxes, unemployment taxes, hospitalization, group insurance, and pensions.
- 5. **Dividends payable.** Dividends become payable only as declared by the board of directors of the company. They do not accrue, or accumulate, as does interest on bonds.
- 6. Unearned revenues. Sometimes revenue is received in advance, such as magazine subscriptions or rent. These are liabilities, as they represent claims against the enterprise. Generally they are settled by delivery of goods or services in the next accounting period. Where these are long-term advances extending well beyond the next period, they should be classed on the balance sheet as noncurrent.
- 7. Portion of long-term debt. The portion of long-term debt payable in the next 12 months should be included in the current liabilities category. This includes amounts due on bonds, mortgages, or long-term notes.

Long-Term Liabilities. Where funds are needed for a long-term purpose such as construction of a building, a long-term liability account would be used. Presumably, increased earnings would be used to retire the debt. Almost always, long-term liabilities are interest-bearing and have a fixed due date.

Following are the principal types of long-term liabilities:

- 1. Long-term notes payable. The company may be able to obtain the needed amount from one lender rather than by issuing bonds for sale to the public. Sometimes notes may be issued to await better terms for issuing bonds.
- 2. **Mortgages payable.** The terms of a mortgage generally pledge the property of the company as security. The mortgage involves a lien on the property, not a transfer of title.
- 3. **Bonds payable.** If the amount of funds needed is larger than a single lender can supply, bonds may be sold to the investing public, splitting the loan into thousands of units. A bond is a written promise to pay the face amount, generally \$1,000, at a future date and to make interest payments semiannually at a stipulated rate of interest. Interest payments on bonds are deductible as expense for income tax purposes, but dividends paid on preferred or common stock are not. This is an important consideration in deciding whether to use stocks or bonds for long-term financing.

Contingent Liabilities. These are potential liabilities arising from past events. For example, when a note receivable is endorsed and transferred to another person, no liability is created. However, there is a possibility that a liability could exist in the future, because the maker of the note might not honor it. If that were to happen, the business that endorsed the note would be required to make payment. Some other examples of contingent liabilities are additional tax assessments, product guarantees, pending lawsuits, and litigation.

It is not necessary to prepare an entry until the potential liability becomes an actuality. However, it cannot be ignored. Therefore, a contingent liability should be reflected in the balance sheet in a footnote describing the possibility of the loss. This will give the reader a more accurate picture of the financial position of the firm.

Example 10 shows a classified balance sheet of typical form, based upon the information in the statement of owner's equity in Example 9.

EXAMPLE 9

J. Ales Statement of Owner's Equity

| J. Ales, Capital, January 1 | | \$4,750 |
|-------------------------------|---------|---------|
| Net Income for the year | \$3,000 | |
| Less: Withdrawals | 2,000 | |
| Increase in Capital | | 1,000 |
| J. Ales, Capital, December 31 | | \$5,750 |

EXAMPLE 10

J. Ales Balance Sheet

| ASSETS | | |
|--------------------------------------|---------|----------|
| Current Assets | | |
| Cash | \$5,400 | |
| Accounts Receivable | 1,600 | |
| Supplies | 500 | \$ 7,500 |
| Total Current Assets | | |
| Fixed Assets | | |
| Land | \$4,000 | |
| Building | 8,000 | |
| Equipment | 2,000 | |
| Total Fixed Assets | | 14,000 |
| Total Assets | | \$21,500 |
| LIABILITIES AND OWNER'S EQUITY | | |
| Current Liabilities | | |
| Notes Payable | \$1,750 | |
| Accounts Payable | 2,000 | |
| Total Current Liabilities | | \$ 3,750 |
| Long-Term Liabilities | | |
| Mortgage Payable | | 12,000 |
| Total Liabilities | | \$15,750 |
| Capital, December 31 | | 5,750 |
| Total Liabilities and Owner's Equity | | \$21,500 |

Corporate Equity Section

Although covered in part in Chap. 11 and fully in Accounting II, it is important to mention the corporation's equity section. A corporation is a legal entity organized in accordance with state or federal laws, with ownership represented by shares of stock. The applicable laws require that a distinction be made between the amount invested in a corporation by its owners (stockholders) and the subsequent changes due to profits or losses. Because of these requirements, the stockholders' equity is shown in at least two parts. If there is more than one class of stock, such as preferred and common, there may be more parts in the stockholders' equity section.

STOCKHOLDERS' EQUITY

| Capital Stock | \$100,000 | |
|-------------------|-----------|-----------|
| Retained Earnings | 25,000 | \$125,000 |

The principal equity accounts for a corporation are those for capital stock, dividends, and retained earnings, but that is a discussion for Chap. 11.

RULES GOVERNING THE BALANCE SHEET

Clearly, such rules must exist, for otherwise it would be necessary to state for each financial statement the specific assumptions used in preparing it. Over the years, certain principles have been developed on the basis of experience, reason, custom, and practical necessity. We call these generally accepted accounting principles, better known as GAAP.

Business entity. Accounts are kept for business entities rather than for the persons who own or are associated with the business.

Continuity. Unless there is strong evidence to the contrary, it is assumed that the business will continue to operate as a going concern. If it were not to continue, then liquidation values, generally much lower, would apply.

Unit of measure. It is assumed that the most practical unit of measure is money and that changes in investment and income will be measured in money. So far, no better unit of measure has been found.

Time period. An essential function of accounting is to provide information for decision making. To accomplish this, it is necessary to establish accounting periods, or systematic time intervals, so that timely accounting data can be developed.

Cost. The properties and services acquired by an enterprise are generally recorded at cost (the cash or its equivalent given to acquire the property or service). The cost is spread over the accounting periods that benefit from the expenditure.

Revenue. Revenue relates to the output of goods and services. In most cases revenue is recognized when goods are delivered or services rendered. In some cases revenue is recognized (1) during production, (2) when production is completed, or (3) when cash is collected.

Matching. In determining the proper periodic income, it is necessary to match related costs and expenses to revenue for the period. The cost of the product sold and all expenses incurred in producing the sale should be matched against the revenue.

Objectivity. Accounting entries should be based on objective evidence to the fullest extent possible. Business documents originating outside the firm provide the best evidence. Estimates should be supported by verifiable objective data.

Consistency. A standard method of treatment is necessary if periodic financial statements are to be compared with one another. Where a different method will state results and financial position more fairly, the change may be made if the effect on the statements is clearly disclosed.

Disclosure. Financial statements and notes to financial statements should contain all relevant data of a material nature. They should disclose such things as a change in accounting methods, contingent liabilities, etc.

Materiality. The accountant must be practical and must consider the relative importance of data. The decision as to what is material and what is unimportant requires judgment rather than inflexible rules.

Conservatism. Accountants necessarily make many value judgments that affect financial statements. In these judgments, it is desirable that they provide for all possible losses and not anticipate profits as yet unrealized.

Summary

| | | |

SOLUTION

There are two steps to solving this problem:

- 1. Prepare an income statement.
- 2. Determine increases or decreases in capital by subtracting the drawing (withdrawal) from the net income.

| Fees Income | | \$14,000 |
|-----------------------|---------|----------|
| Expenses | | |
| Rent Expense | \$2,000 | |
| Salaries Expense | 5,000 | |
| Miscellaneous Expense | 1,000 | |
| Total Expenses | | 8,000 |
| Net Income | | \$ 6,000 |
| | | |
| Net Income | \$6,000 | |
| Drawing | 2,000 | |
| Increase in Capital | \$4,000 | |
| | | |

2.4. Based on the information in Prob. 2.3, if the withdrawal were \$9,000 instead of \$2,000, what would the increase (decrease) become?

SOLUTION

If the withdrawal is larger than the net income, a decrease in capital will result.

| Net Income | \$6,000 |
|---------------------|---------|
| Drawing | 9,000 |
| Decrease in Capital | \$3,000 |

2.5. If the Capital account has a balance on January 1 of \$32,000, what will be the balance on December 31 (a) based on Prob. 2.3? (b) based on Prob. 2.4?

SOLUTION

| (a) | Capital, January 1 | | \$32,000 |
|-----|----------------------|---------|----------|
| | Net Income | \$6,000 | |
| | Less: Drawing | 2,000 | |
| | Increase in Capital | | 4,000 |
| | Capital, December 31 | | \$36,000 |
| (b) | Capital, January 1 | | \$32,000 |
| | Net Income | \$6,000 | |
| | Less: Drawing | 9,000 | |
| | Decrease in Capital | | 3,000 |
| | Capital, December 31 | | \$29,000 |

2.6. Based on the following information, determine the capital as of December 31, 19X8: Net Income for period, \$18,000; Drawing, \$6,000; Capital (January 1, 19X8), \$20,000.

| | _ |
|--|---|
| | |
| | |
| | |

| Capital, January 1, 19X8 | | \$20,000 |
|----------------------------|----------|----------|
| Net Income | \$18,000 | |
| Less: Drawing | 6,000 | |
| Increase in Capital | | 12,000 |
| Capital, December 31, 19X8 | | \$32,000 |

| 2.7. | Based on the following information, determine the capital as of December 31: Capital (January 1), |
|------|---|
| | \$26,000; Net Income, \$18,000; Drawing, \$20,000. |

| | |
|-------------|-------------|
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

SOLUTION

| Capital, January 1 | | \$26,000 |
|----------------------|----------|----------|
| Net Income | \$18,000 | |
| Drawing | 20,000 | |
| Decrease in Capital | | 2,000 |
| Capital, December 31 | | \$24,000 |

Note: It is possible to withdraw more than net income, provided that your beginning capital has an adequate balance. This will result in a decrease in capital, which will be subtracted from the beginning capital.

2.8. Determine the capital as of December 31, given the following information: Capital (January 1), \$30,000; Net Loss for period, \$18,000; Drawing, \$4,000.

| | |
|-----------------|---|
| i | |
| | |
| 1 | ļ |
| | |
| ł | |
| <u> </u> | |
| ľ | |
| <u> </u> | |
| | |
| | |

SOLUTION

| <u> </u> | \$30,000 |
|----------|----------|
| \$18,000 | |
| 4,000 | |
| | 22,000 |
| | \$ 8,000 |
| | 4,000 |

2.9. Based on the following information, determine the capital on December 31:

| Cash | \$6,000 |
|------------------|---------|
| Supplies | 400 |
| Equipment | 8,000 |
| Accounts Payable | 4,500 |
| Notes Pavable | 2,500 |

| ASSETS | | LIABILITIES AND OWNER'S EQUITY | |
|--------------|-----------------|--------------------------------------|----------|
| Cash | \$ 6,000 | Accounts Payable | \$ 4,500 |
| Supplies | 400 | Notes Payable | 2,500 |
| Equipment | _ 8,000 | Total Liabilities | \$ 7,000 |
| | | Capital | 7,400* |
| Total Assets | <u>\$14,400</u> | Total Liabilities and Owner's Equity | \$14,400 |

^{*\$14,400(}Assets) - \$7,000(Liabilities) = \$7,400(Owner's Equity).

2.10. Selected accounts of the Ruez Company produced the following balances:

| | January 1 | January 31 |
|-------------|-----------|------------|
| Assets | \$16,000 | \$19,000 |
| Liabilities | 4,000 | 3,000 |

What was the net income of the firm, assuming that there were no withdrawals?

SOLUTION

| Capital, January 1 | \$12,000* |
|---------------------|-----------|
| Capital, January 31 | 16,000** |
| Increase in Capital | \$ 4,000 |

Because there was no drawing, \$4,000 must also be the net income, because net income minus drawing equals increase in capital.

2.11. Based on the information in Prob. 2.10, determine the net income if \$1,500 was withdrawn from the company.

SOLUTION

| Capital, January 1 | \$12,000 |
|---------------------|----------|
| Capital, January 31 | 16,000 |
| Increase in Capital | \$ 4,000 |

We know that net income – drawing = increase in capital. Therefore, net income – 1,500 = 4,000. Net income must be 5,500.

^{*(\$16,000 - \$4,000).} Based on the concept assets - liabilities = owner's equity.

^{**(\$19,000 - \$3,000).} Based on the concept, assets - liabilities = owner's equity.

2.12. Below are the financial statements for Lucky Dip Ice Cream Consulting. Certain key figures have been left out. Place the correct amount needed in each of the blanks.

| Lucky Dip Ice Cream Consulting | | |

| Total Assets | |
| LIABILITIES AND OWNER'S EQUITY | |
| Current Liabilities | |
| | |
| | |
| Total Current Liabilities | |
| Long-Term Liabilities | |
| | |
| Total Liabilities | |
| Capital | |
| Total Liabilities and Owner's Equity | |

| ASSETS | | |
|--------------------------------------|---------|----------|
| Current Assets | | |
| Cash | \$6,000 | |
| Accounts Receivable | 3,000 | |
| Supplies | 1,000 | |
| Total Current Assets | | \$10,000 |
| Fixed Assets | | |
| Equipment | | 14,000 |
| Total Assets | | \$24,000 |
| LIABILITIES AND OWNER'S EQUITY | | |
| Current Liabilities | | |
| Notes Payable | \$1,500 | |
| Accounts Payable | 2,500 | |
| Total Current Liabilities | | \$ 4,000 |
| Long-Term Liabilities | | |
| Mortgage Payable | | 12,000 |
| Total Liabilities | | \$16,000 |
| Capital | | 8,000 |
| Total Liabilities and Owner's Equity | | \$24,000 |

2.16. What is the current ratio in Prob. 2.15?

SOLUTION

Total current assets = \$10,000
Total current liabilities = \$4,000

$$\frac{10,000}{4,000} = 2.5:1$$

The firm has \$2.50 in current assets for every \$1 in current liabilities.

2.17. Complete the chart by writing in the appropriate column the name of the account group in which the particular account belongs and check the appropriate column for the classification of each balance sheet item.

| | Income Statement | Balance Sheet | Current Asset | Fixed Asset | Current Liability | Long-Term Liability |
|---------------------|---------------------|------------------|------------------|----------------|----------------------|------------------------|
| Accounts Payable | | | | | | |
| Accounts Receivable | | | | | | _ |

Analyzing and Classifying Transactions

3.1 INTRODUCTION

Preparing a new equation A = L + OE after each transaction would be cumbersome and costly, especially when there are a great many transactions in an accounting period. Also, information about a specific item, such as cash, would be lost as successive transactions were recorded. This information could be obtained by going back and summarizing the transactions, but that would be very time-consuming.

A much more efficient way is to classify the transactions according to items on the balance sheet and income statement. The increases and decreases are then recorded according to type of item by means of a summary called an *account*.

3.2 THE ACCOUNT

A separate account is maintained for each item that appears on the balance sheet (assets, liabilities, and owner's equity), and on the income statement (revenue and expense). Thus an account may be defined as a record of the increases, decreases, and balances in an individual item of asset, liability, owner's equity, revenue, or expense.

The simplest form of the account is known as the "T" account because it resembles the letter "T". The account has three parts: (1) the name of the account and the account number, (2) the debit side (left side), and (3) the credit side (right side). The increases are entered on one side, the decreases on the other. Which change goes on which side will be discussed in Sec. 3.3. The balance (the excess of the total of one side over the total of the other) is inserted near the last figure on the side with the larger amount.

EXAMPLE 1

| | Casl | h |
|-----|-------|-----|
| | 700 | 600 |
| | 400 | 200 |
| | 600 | |
| 900 | 1,700 | 800 |

Note that the left side of the account adds up to \$1,700 while the right side totals \$800. The \$1,700 and \$800 totals, respectively, are written in smaller type and are known as footings. The difference between the total amounts is \$900 and is called the ending balance. Since the larger total, \$1,700, appears on the left side of the account, the ending balance of \$900 is placed there. Had the right side total been greater than the left, the ending balance would have appeared on the right side.

3.3 DEBITS AND CREDITS: THE DOUBLE-ENTRY SYSTEM

When an amount is entered on the left side of an account, it is a *debit* and the account is said to be *debited*. When an amount is entered on the right side, it is a *credit* and the account is said to be *credited*. The abbreviations for debit and credit are Dr. and Cr., respectively.

Whether an increase in a given item is credited or debited depends on the category of the item. By convention, asset and expense increases are recorded as debits, whereas liability, capital, and income increases are recorded as credits. Asset and expense decreases are recorded as credits, whereas liability, capital, and income decreases are recorded as debits. The following tables summarize the rule.

| Assets and Expenses | | | wner's Equity, ncome |
|---------------------|-------------|-------------|-------------------------|
| Dr. | Cr. | Dr. | Cr. |
| + | - | - | + |
| (Increases) | (Decreases) | (Decreases) | (Increases) |

EXAMPLE 2

Let us reexamine the transactions that occurred in Mr. Bagon's law firm during the first month of operation. These are the same as in Chap. 1, except that accounts are now used to record the transactions.

Transaction (1). Mr. Bagon opened his law practice, investing \$5,000 in cash. The two accounts affected are Cash and Capital. Remember that an increase in an asset (cash) is debited, whereas an increase in capital is credited.

| Ca | ish | Сар | oital |
|-----------|-----|-----|-----------|
| Dr. | Cr. | Dr. | Cr. |
| + | - | - | + |
| (1) 5,000 | | | 5,000 (1) |

Transaction (2). Bought supplies for cash, \$300. Here we are substituting one asset (cash) for another asset (supplies). We debit Supplies, because we are receiving more supplies. We credit Cash, because we are paying out cash.

| Cash | | Supplies | |
|-------|---------|----------|-----|
| Dr. | Cr. | Dr. | Cr. |
| + | - | + | _ |
| 5,000 | 300 (2) | (2) 300 | |

Transaction (3). Bought equipment from Altway Furniture Company on account, \$2,500. We are receiving an asset (equipment), and therefore we debit Equipment to show the increase. We are not paying cash, but creating a new liability, thereby increasing the liability account Accounts Payable.

| Equipment | | Accounts Payable | |
|-----------|-----|------------------|-----------|
| Dr. | Cr. | Dr. | Cr. |
| + | _ | _ | + |
| (3) 2,500 | | | 2,500 (3) |

Transaction (4). Received \$2,000 in fees earned during the month. In this case, we are increasing the asset account Cash, as we have received \$2,000. Therefore, we debit it. We are increasing the owner's equity, yet we do not credit Capital. It is better temporarily to separate the income from the capital and create a new account, Fees Income (revenue).

| Ca | ısh | Fees I | ncome |
|--------------------|-----|--------|-----------|
| Dr. | Cr. | Dr. | Cr. |
| + | _ | _ | + |
| 5,000 (4) 2,000 | 300 | | 2,000 (4) |

Transaction (5). Paid office rent for January, \$500. We must decrease the asset account Cash, because we are paying out money. Therefore, we credit it. It is preferable to keep expenses separated from capital. Therefore, we open a new account for the expense involved, Rent Expense. The \$500 is entered on the left side, as expenses decrease owner's equity.

| Ca | ish | Rent Ex | pense |
|----------------|---------|---------|-------|
| Dr. | Cr. | Dr. | Cr. |
| + | _ | + | _ |
| 5,000 2,000 | 300 | (5) 500 | |
| 2,000 | 500 (5) | } | |

Transaction (6). Paid salary for part-time help, \$200. Again, we must reduce our asset account Cash because we are paying out money. Therefore, we credit the account. Bagon's owner's equity was reduced by an expense, and we open another account, Salaries Expense. A debit to this account shows the decrease in owner's equity.

| Cash | | Salaries Expense | | |
|-------|---------|------------------|-----|--|
| Dr. | Cr. | Dr. | Cr. | |
| + | - | + | _ | |
| 5,000 | 300 | (6) 200 | | |
| 2,000 | 500 | | | |
| | 200 (6) | | | |

Transaction (7). Paid \$1,000 to Altway Furniture Company, on account. This transaction reduced our asset account (Cash), since we are paying out money. We therefore credit Cash. We also reduce our liability account Accounts Payable by \$1,000; we now owe that much less. Thus, we debit Accounts Payable.

| Cash | | Account | s Payable |
|-------|-----------|-----------|-----------|
| Dr. | Cr. | Dr. | Cr. |
| + | _ | - | + |
| 5,000 | 300 | (7) 1,000 | 2,500 |
| 2,000 | 500 | | |
| | 200 | | |
| | 1,000 (7) | | |

Transaction (8). After taking inventory at the end of the month, Mr. Bagon found that he had used \$200 worth of supplies. We must reduce the asset account Supplies by crediting it for \$200. Supplies Expense is debited for the decrease in owner's equity. This is computed as follows: beginning inventory of \$300, less supplies on hand at the end of the month \$100 indicates that \$200 must have been used during the month.

| Supplies | | Expense | | |
|----------|---------|---------|-----|--|
| Dr. | Cr. | Dr. | Cr. | |
| + | | + | | |
| 300 | 200 (8) | (8) 200 | | |

Transaction (9). Withdrew \$300 for personal use. The withdrawal of cash means that there is a reduction in the asset account Cash. Therefore, it is credited. The amount invested by the owner is also \$300 less. We must open the account Drawing, which is debited to show the decrease in capital.

| Cash | | Drav | ving |
|-------|---------|---------|------|
| Dr. | Cr. | Dr. | Cr. |
| + | _ | + | _ |
| 5,000 | 300 | (9) 300 | |
| 2,000 | 500 | | |
| | 200 | | |
| | 1,000 | | |
| | 300 (9) | | |

An account has a debit balance when the sum of its debits exceeds the sum of its credits; it has a credit balance when the sum of the credits is the greater. In *double-entry accounting*, which is in almost universal use, there are equal debit and credit entries for every transaction. When there are only two accounts affected, the debit and credit amounts are equal. If more than two accounts are affected, the total of the debit entries must equal the total of the credit entries (see Example 5).

3.4 THE LEDGER

The complete set of accounts for a business entity is called a *ledger*. It is the "reference book" of the accounting system and is used to classify and summarize transactions and to prepare data for financial statements. It is also a valuable source of information for managerial purposes., giving, for example, the amount of sales for the period or the cash balance at the end of the period. Depending on what method of data processing is used, the ledger may take the form or a bound book with a page for each account, or magnetic tapes or disks. In any case, the accounting principles are the same.

3.5 THE CHART OF ACCOUNTS

It is desirable to establish a systematic method of identifying and locating each account in the ledger. The *chart of accounts*, sometimes called the *code of accounts*, is a listing of the accounts by title and numerical designation. In some companies the chart of accounts may run to hundreds of items. In

designing a numbering structure for the accounts, it is important to provide adequate flexibility to permit expansion without having to revise the basic system. Generally, blocks of numbers are assigned to various groups of accounts, such as assets, liabilities, etc. There are various systems of coding, depending on the needs and desires of the company.

EXAMPLE 3

A simple chart structure is to have the first digit represent the major group in which the account is located. Thus accounts that have numbers beginning with 1 are assets; 2, liabilities; 3, capital; 4, income; and 5, expenses. The second or third digit designates the position of the account in the group.

In the more common two-digit system, assets are assigned the block of numbers 11-19, and liabilities 21-29. In larger firms a three-digit (or more) system may be used, with assets assigned 101-199 and liabilities 201-299. Following is an example of the numerical designations for the account groups under both methods.

| Account Group | Two-Digit | Three-Digit |
|--|---|---|
| Assets Liabilities Capital Income Expenses | 11-19 21-29 31-39 41-49 51-59 | 101–199 201–299 301–399 401–499 501–599 |

Thus Cash may be account 11 under the first system and account 101 under the second system. The Cash account may be further broken down as: 101, Cash—First National Bank; 102, Cash—Second National Bank; etc.

3.6 THE TRIAL BALANCE

As every transaction results in an equal amount of debits and credits in the ledger, the total of all debit entries in the ledger should equal the total of all credit entries. At the end of the accounting period we check this equality by preparing a schedule called a *trial balance*, which compares the total of all *debit balances* with the total of all *credit balances*. The procedure is as follows:

- 1. List account titles in numerical order.
- Record the balance of each account, entering debit balances in the debit column and credit balances in the credit column. (Note: Asset and expense accounts are debited for increases and would normally have debit balances. Liabilities, capital, and income accounts are credited for increases and would normally have credit balances.)
- 3. Add the columns and record the totals.
- 4. Compare the totals. They must both be the same.

If the totals agree, the trial balance is in balance, indicating the equality of the debits and credits for the hundreds or thousands of transactions entered in the ledger. Although the trial balance provides arithmetic proof of the accuracy of the records, it does not provide theoretical proof. For example, if the purchase of equipment was incorrectly charged to Expense, the trial balance columns may agree, but theoretically the accounts would be wrong, as Expense would be overstated and Equipment understated. In addition to providing proof of arithmetic accuracy in accounts, the trial balance facilitates the preparation of the periodic financial statements.

EXAMPLE 4

The summary of the transactions for Mr. Bagon (see Example 2), and their effect on the accounts, is shown below. The trial balance is then taken. Note that each account now has a numerical designation, in this case using a two-digit base.

| | As | sets | | | Liab | ilities | | | Owner' | s Equity | |
|-------|-------|--------------|------------|-----|---------|-----------|-------|-----|----------|------------|-----|
| | Ca | ish | 11 | | Account | s Payable | 21 | | A. Bago | n, Capital | 31 |
| (1) | 5,000 | 300 | (2) | (7) | 1,000 | 2,500 | (3) | | | 5,000 | (1) |
| (4) | 2,000 | 500 | (5) | | | : | 1,500 | | Dra | wing | 32 |
| 4,700 | 7,000 | 200 1,000 | (6) (7) | | | | | (9) | 300 | <u> </u> | |
| | | 300 2,300 | (9) | | | | | | Fees 1 | ncome | 32 |

| (3) | 2,500 | | | | | | | (6) | 200 | | |
| | | | | | | | | | Supplies | Expense | 53 |
| | | | | | | | | (8) | 200 | | |

A. Bagon, Lawyer Trial Balance January 31, 19X8

| | Dr. | Cr. |
|-------------------|---------|---------|
| Cash | \$4,700 | |
| Supplies | 100 | |
| Equipment | 2,500 | |
| Accounts Payable | | \$1,500 |
| A. Bagon, Capital | | 5,000 |
| Drawing | 300 | |
| Fees Income | | 2,000 |
| Rent Expense | 500 | |
| Salaries Expense | 200 | |
| Supplies Expense | 200 | |
| | \$8,500 | \$8,500 |

EXAMPLE 5

9. owner's equity; 10. trial balance

As stated on page 49, if more than two accounts are affected in a transaction, the total of the debit entries must equal the total of the credit entries. For example,

(a) Bought a \$3,000 piece of equipment, paying \$1,000 cash and owing the balance.

| Cash ' | Equipment | Accounts Payable | Capital | |
|-----------------------|-----------|------------------|-------------|--|
| Bal. 10,000 1,000 (a) | (a) 3,000 | 2,000 (a) | 10,000 Bal. | |

Summary

| 1. | To classify and summarize a single item of an account group, we use a form called a(n) |
|-----|---|

| 4. | Increases in all asset accounts are |
| 5. | Increases in all liability accounts are |
| 6. | Increases in all equity accounts are |
| 7. | Increases in all income accounts are |
| 8. | Increases in all expense accounts are |
| 9. | Expenses are debited because they decrease |
| 10. | The schedule showing the balance of each account at the end of the period is known as the |
| | |

Solved Problems

Answers: 1. account; 2. ledger; 3. debit side, credit side; 4. debited; 5. credited; 6. credited; 7. credited; 8. debited;

3.1. Revenue and expense accounts are designated as *temporary* or *nominal* accounts (accounts in name only). Explain.

The increase in owner's equity resulting from revenue is temporary, since owner's equity will be reduced by expenses in the same period. These accounts are closed out at the end of the accounting period, and the net balance (for example, the excess of revenue over expenses for the period) is then transferred to the Capital account.

The permanent or real account balances—assets, liabilities, and capital—are not closed out at the end of the accounting period. For example, the cash or inventory balance at the end of one period becomes the beginning balance in the following period.

3.2. Interpret the balance in the Supplies account at the end of the period.

SOLUTION

The book figure before adjustment is the amount on hand at the beginning of the period plus the amount purchased during the period. The sum is the total amount that was available during the period and was either used up or is still on hand. When an inventory count is made at the end of the period, the amount still on hand is determined, and the difference between that amount and the available amount above represents what was used during the period, which is an expense (supplies expense). The balance on hand is an asset (supplies on hand).

3.3. In each of the following types of T accounts, enter an increase (by writing +) and a decrease (by writing -).

| Assets | | Liabi | ilities | Owner's Equity | |
|--------|-----|-------|---------|----------------|-----|
| Dr. | Cr. | Dr. | Cr. | Dr. | Cr. |

| Income | | Expenses | | |

- **3.11.** The trial balance of Greg Johnson presented below does not balance. In reviewing the ledger, you discover the following:
 - 1. The debits and credits in the Cash account total \$24,100 and \$21,400, respectively.
 - 2. The \$400 received in settlement of an account was not posted to the Accounts Receivable account.
 - 3. The balance of the Salaries Expense account should be \$200 less.
 - 4. No balance should exist in the Notes Payable account.
 - 5. Each account should have a normal balance.

Prepare a corrected trial balance.

- **3.13.** For the transactions below, record each entry in the T accounts furnished. (*Note*: The transactions are those of Prob. 1.17, which may be used in reference.)
 - (1) The Nu-Look Dry Cleaning Company opened a business bank account by depositing \$12,000 on November 1.
 - (2) Purchased supplies for cash, \$220.
 - (3) Purchased dry cleaning equipment from Hill Cleaning Equipment, Inc., for \$3,500, paying \$1,500 in cash with the balance on account.
 - (4) Paid rent for the month, \$825.
 - (5) Cash sales for the month totaled \$1,850.
 - (6) Paid salaries of \$375.
 - (7) Paid \$500 on account to Hill Cleaning Equipment, Inc.
 - (8) The cost of supplies used was determined to be \$60.

| | \$15,350 | \$15,350 |

Examination I

Chapters 1-3

- 1. What is meant by the accounting cycle?
- 2. Define the following terms and give an example of each: (a) assets, (b) liabilities, (c) capital.
- 3. Define (a) revenue, (b) expense, (c) net income.
- 4. (a) What is an account?
 - (b) What is a chart of accounts?
- 5. Distinguish between temporary and permanent accounts.
- 6. What is meant by the double-entry system of accounting?
- 7. What does the balance in the Supplies account at the end of the period represent?
- 8. Place a check mark in the appropriate box below to indicate the name of the account group in which each account belongs.

| | Income S | Income Statement | | Balance Sheet | |
|---------------------|----------|------------------|--------|---------------|-------------------|
| | Income | Expense | Assets | Liabilities | Owner's Equity |
| Accounts Payable | | | | | |
| Accounts Receivable | | | | | |
| Building | | | | | |
| Capital | | | | | |
| Cash | | | | | |
| Drawing | | | | | |
| Equipment | | | | | |
| Fees Income | | | | | |
| General Expense | | | | | |
| Interest Expense | 1 | | | | |
| Interest Income | | | | | |
| Land | | | | | · |
| Notes Payable | | | | | |
| Other Income | | | | | |
| Rent Expense | | | | | |
| Rent Income | | | | | |
| Salaries Expense | | | | | |
| Supplies | | | | | |
| Supplies Expense | | | | | |
| Tax Expense | | | | | |

9. For each numbered transaction below, indicate the account to be debited and the account to be credited by placing the letter representing the account in the appropriate column. Accounts Payable (a); Capital (b); Cash (c); Drawing (d); Equipment (e); Fees Income (f); Notes Payable (g); Rent Expense (h); Salaries Expense (i); Supplies (j); Supplies Expense (k).

| | Debit | Credit |
|---|-------|--------|
| Invested cash in the firm | (c) | (b) |
| Received cash for services rendered | | |
| Paid salaries for the week | | |
| Bought equipment on account | | |
| Bought supplies on account | | |
| Gave a note in settlement of the equipment on account | | |
| Borrowed money from the bank | | |
| Withdrew cash for personal use | | |
| A count showed that approximately three-fourths of the supplies inventory had been used during the year | | |
| Paid rent for the month | | |

10. Classify the following accounts by placing a check mark in the appropriate column.

| | Current Assets | Fixed Assets | Current Liabilities | Long-Term Liabilities |
|---------------------|-------------------|-----------------|------------------------|--------------------------|
| Accounts Receivable | | | | |
| Accounts Payable | | | | |
| Notes Payable | | | | |
| Mortgage Payable | İ | | | |
| Cash | | | | |
| Supplies | | | | |
| Salaries Payable | | | | |
| Bonds Payable | | | | |
| Equipment | | | | |
| Land | | | | |

11. Prepare the statement of owner's equity for the year ended December 31 of the Grant Company, given:

| Capital, January 1 | \$72,400 |
|-------------------------------|----------|
| Net income for period | 27,600 |
| Withdrawals by the proprietor | 12,000 |

12. (a) Prepare the statement of owner's equity for the year ended December 31 for the Mary Tyler Company, given:

| Capital, January 1 | \$86,240 |
|--------------------------|----------|
| Net income for period | 12,000 |
| Withdrawals by Ms. Tyler | 18,000 |

(b) If there were a net loss of \$12,000 instead of net income, find the new capital as of December 31.

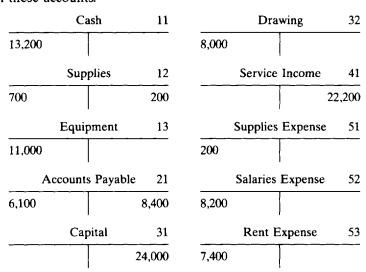

13. On January 1, Anita Accord began business by investing \$5,000 in her firm. Prepare the income statement for January, given the following income and expenditures:

| Income from Services | \$12,600 | Supplies Expense | \$ 75 |
|----------------------|----------|-----------------------|-------|
| Rent Expense | 200 | Utilities Expense | 125 |
| Salaries Expense | 150 | Repairs Expense | 400 |
| Commission Expense | 100 | Miscellaneous Expense | 225 |

14. Below are the account balances of the State-Rite Cleaning Company as of December 31, 19X8. Prepare (a) an income statement, (b) a statement of owner's equity, (c) a balance sheet.

| Accounts Payable | \$11,600 | Notes Payable | \$ 2,800 |
|-----------------------|----------|------------------|----------|
| Capital (beginning) | 14,300 | Rent Expense | 12,600 |
| Cash | 9,300 | Repairs Expense | 2,400 |
| Cleaning Income | 39,500 | Salaries Expense | 9,200 |
| Drawing | 4,800 | Supplies | 5,300 |
| Equipment | 19,200 | Supplies Expense | 2,400 |
| Miscellaneous Expense | 3,000 | | |

- 15. The Sullivan Residence Club was established on January 1, 19X8, and \$15,000 cash and a \$22,000 building were invested in the club. A summary of transactions for January follows. Record this information in the appropriate T accounts.
 - (1) Collected rents for the month of January, \$2,400
 - (2) Wrote check for insurance, \$850
 - (3) Paid the electric bill, \$240
 - (4) Paid \$350 to the maintenance person as January salary
 - (5) Bought supplies on account, \$800
 - (6) Borrowed \$15,000 from the bank for additions to the building
 - (7) Withdrew \$300 for personal use
 - (8) Supplies worth \$500 on hand at the end of the month
- 16. The following T accounts were taken from the ledger of the Utility Service Company. Prepare a trial balance from these accounts.

17. A. Levy Company's trial balance appears below. Certain accounts have been recorded improperly from the ledger to the trial balance, causing it not to balance. Present a corrected balance.

A. Levy Company Trial Balance January 31, 19X8

| | Dr. | Cr. |
|---------------------|-----------------|----------|
| Cash | \$29,000 | |
| Accounts Receivable | | \$ 4,000 |
| Accounts Payable | 3,000 | |
| Capital | | 12,500 |
| Drawing | | 500 |
| Fees Income | | 22,000 |
| Rent Income | 11,000 | |
| Rent Expense | 1,000 | |
| Salaries Expense | 10,000 | |
| General Expense | | 4,000 |
| | <u>\$54,000</u> | \$43,000 |

Answers to Examination I

- 1. The accounting cycle is the sequence of procedures repeated each accounting period. The steps are (1) recording transactions in journals; (2) classifying data by posting to ledger; (3) summarizing data by classification; (4) adjusting and correcting recorded data; (5) preparing statements.
- 2. (a) Property of value owned by a business; Cash.
 - (b) Amounts owed by the business to outsiders; Accounts Payable.
 - (c) The investments by the owner(s) and the earnings retained in the business (also called *proprietorship* or *owner's equity*); J. Smith, Capital.
- 3. (a) The inflow of cash and receivables for an accounting period, resulting from the delivery of goods or the rendering of services.
 - (b) The cost of goods and services used up or consumed in the process of obtaining revenue.
 - (c) The increase in capital resulting from profitable operation of a business. Alternatively, the excess of revenues over expenses for the particular period.
- **4.** (a) An account is a form used to record changes in a particular asset, liability, item of capital, revenue, or expense. It is used to classify and summarize transactions.
 - (b) A chart of accounts is a listing of the account titles showing the sequence of the accounts in the ledger and the number assigned to each account. It is a systematic method of identifying and locating each account.
- 5. Revenue and expense accounts are designated as temporary or nominal accounts because the increase in owner's equity resulting from the revenue is subject to reduction by expenses in the same period. These accounts are closed out at the end of the accounting period and the net balance transferred to the Capital

account. Permanent or real account balances—assets, liabilities, and capital—are not closed out at the end of the accounting period.

- 6. In the double-entry system, each transaction must be recorded in such a way that the total debits equal the total credits. In most cases, there will be only one debit and one credit account affected, and thus the dollar amounts will be equal.
- 7. Amount on hand at the beginning of the period, plus purchases during the period, minus consumption during the period.

8.

Recording Transactions

4.1 INTRODUCTION

In the preceding chapters we discussed the nature of business transactions and the manner in which they are analyzed and classified. The primary emphasis was the why rather than the how of accounting operations; we aimed at an understanding of the reason for making the entry in a particular way. We showed the effects of transactions by making entries in T accounts. However, these entries do not provide the necessary data for a particular transaction, nor do they provide a chronological record of transactions. The missing information is furnished by the use of an accounting form known as the journal.

4.2 THE JOURNAL

The journal, or day book, is the book of *original* entry for accounting data. Subsequently, the data is transferred or *posted* to the ledger, the book of subsequent or *secondary* entry. The various transactions are evidenced by sales tickets, purchase invoices, check stubs, etc. On the basis of this evidence, the transactions are entered in chronological order in the journal. The process is called *journalizing*.

There are a number of different journals that may be used in a business. For our purposes they may be grouped into (1) the general journal and (2) specialized journals. The latter type, which are used in businesses with a large number of repetitive transactions, are described in Chap. 10. To illustrate journalizing, we here use the general journal, whose standard form is shown below.

| | General Journal | 1 | | Page J-1 |
|----------------|---|----------|---------|----------|
| Date (1) | Description (2) | P.R. (3) | Dr. (4) | Cr. |
| | (2) | (3) | (4) | (5) |
| 19X8 Oct. 7 | Cash | 11 | 10,000 | |
| | John Hennessy, Capital Invested cash in the business | 31 | | 10,000 |
| | (6) | | | |

^{*}Signifies General Journal, page 1.

4.3 **JOURNALIZING**

We describe the entries in the general journal according to the numbering on page 73.

- (1) **Date**. The year, month, and day of the entry are written in the date column. The year and month do not have to be repeated for additional entries until a new month occurs or a new page is needed.
- (2) **Description**. The account title to be debited is entered on the first line, next to the date column. The name of the account to be credited is entered on the line below and indented.
- (3) *P.R.* (*Posting Reference*). Nothing is entered in this column until the particular entry is posted, that is, until the amounts are transferred to the related ledger accounts. The posting process will be described in Sec. 4.4.
- (4) **Debit.** The debit amount for each account is entered in this column adjacent to the left margin. Generally there is only one item, but there can be two or more separate items.
- (5) Credit. The credit amount for each account is indented and entered in this column. Here again, there is generally only one account, but two or more accounts with different amounts can be involved. When there is more than one debit or credit in a single entry, the transaction is known as a compound entry.
- (6) **Explanation**. A brief description of the transaction is usually made on the line below the credit. Some accountants feel that if the transaction is obvious, the explanation may be omitted. Generally a blank line is left between the explanation and the next entry.

EXAMPLE 1

To help in understanding the operation of the general journal, let us journalize the transactions previously described for Mr. Bagon's business (Example 2 in Chap. 3).

- Jan. 4 Mr. Bagon invested \$5,000 in his law practice
 - 4 Bought supplies for cash, \$300
 - 4 Bought equipment from Altway Furniture Company on account, \$2,500
 - 15 Received \$2,000 in fees earned during the month
 - 30 Paid office rent for January, \$500
 - 30 Paid salary for part-time help, \$200
 - 31 Paid \$1,000 to Altway Furniture Company, on account
 - 31 After taking an inventory, Mr. Bagon found that he had used \$200 worth of supplies
 - 31 Withdrew \$300 for personal use

| Date | Description | P.R. | Dr. | Cr. |
|--------|-------------------------------|------|-------|-------|
| 19X8 | | | | |
| Jan. 4 | Cash | | 5,000 | |
| | A. Bagon, Capital | | | 5,000 |
| | Investment in law practice. | | | |
| 4 | Supplies | } | 300 | |

| | Bought supplies for cash. | | | |
| 4 | Equipment | | 2,500 | |
| • | Accounts Payable | | 2,500 | 2,500 |
| | Bought equipment from Altway. | | | |
| | | ļ | | |

| Date | Description | P.R. | Dr. | Cr. |
|------|--|------|-------|-------|
| 15 | Cash Fees Income Received payment for services. | | 2,000 | 2,000 |
| 30 | Rent Expense Cash Paid rent for month. | | 500 | 500 |
| 30 | Salaries Expense Cash Paid salaries of part-time help. | | 200 | 200 |
| 31 | Accounts Payable Cash Payment on account to Altway. | | 1,000 | 1,000 |
| 31 | Supplies Expense Supplies Supplies used during the month. | | 200 | 200 |
| 31 | A. Bagon, Drawing Cash Personal withdrawal. | | 300 | 300 |

4.4 POSTING

The process of transferring information from the journal to the ledger for the purpose of summarizing is called *posting*. Primarily a clerical task, posting is ordinarily carried out in the following steps:

1. **Record the amount and date.** The date and the amounts of the debits and credits are entered in the appropriate accounts.

| | | General Jou | General Journal Page | | | | |
|-------------|--------|------------------------|----------------------|-------|-----------|---------|---------|
| | Date | Description | P.R. | Dr. | Cr. | _ | |
| | Jan. 4 | Cash A. Bagon, Capital | | 5,000 | 5,000 - | | |
| | | Cash 11 | | | A. Bagon, | Capital | 31 |
| Jan. 4 ↑ | 5,000 | | | | | Jan. 4 | 5,000 ← |

- 2. **Record the posting reference in the account.** The number of the journal page is entered in the account.
- 3. Record the posting in the journal. For cross-referencing, the code number of the account is now entered in the P.R. column of the journal (solid line).

| | Page J-1 | | | |
|--------------|------------------------|----------|-----------|------------|
| Date | Description | P.R. | Dr. | Cr. |
| Jan. 4 | Cash A. Bagon, Capital | 11 31 | 5,000 | 5,000 |

| 8. | The complete process of accounting is called the |
| | swers: 1. journal; 2. book of original entry; 3. posting; 4. chart of accounts; 5. 1, 2, 3; 6. 4, 5; 7. journalizing; accounting cycle |

Solved Problems

4.1. What is a compound journal entry?

SOLUTION

An entry having more than one debit or more than one credit is called a compound entry. For example, land was bought (debit) for \$10,000, with a down payment of cash (credit) of \$1,000 and a mortgage (credit) of \$9,000.

4.2. How does the incorrect posting of a debit as a credit affect the trial balance?

SOLUTION

The trial balance will be out of balance by twice the amount incorrectly posted. For example, if a \$200 debit to Cash is posted as a credit, there will be \$400 in credits and 0 in debits, making a net difference of \$400.

4.3. In the shaded space below each entry, write a brief explanation of the transaction that might appear in the general journal.

| Equipment | 8,000 | |
|---------------------------------|-------|-------|
| Cash | | 2,000 |
| Accounts Payable, William Smith | | 6,000 |
| | | |
| Accounts Payable, William Smith | 2,000 | |
| Cash | | 2,000 |
| | | |
| Accounts Payable, William Smith | 4,000 | |
| Notes Payable | | 4,000 |

| Equipment | 8,000 | |
|--|-------|-------|
| Cash | | 2,000 |
| Accounts Payable, William Smith | | 6,000 |
| Purchase of equipment, 25% for cash, balance on account. | | |
| Accounts Payable, William Smith | 2,000 | |
| Cash | | 2,000 |
| Partial payment of the accounts payable. | | |
| Accounts Payable, William Smith | 4,000 | |
| Notes Payable | | 4,000 |
| Note payable in settlement of account payable. | | |

4.4. Dr. Stacey Kotin, Dentist, began her practice by investing the following assets:

| Cash | \$2,600 |
|-----------|---------|
| Supplies | 1,400 |
| Equipment | 12,500 |
| Furniture | 3,000 |

Record the opening entry in the journal.

| *** ********************************** | Debit | Credit |

| 1,600 | |
| | 1,600 |
| | 12,000 1,000 8,000 2,200 |

- 4.7. Record the following entries in the general journal for the Leidner Medical Group.
 - (a) Invested \$18,000 in cash, \$4,800 in supplies, and \$12,200 in equipment to begin the Leidner Medical Group.
 - (b) Received \$2,400 in cash from patients for the week.
 - (c) Invested additional cash of \$5,000 in the firm.

| _ |
|---|

SOLUTION

| | Debit | Credit |
|------------------|--------|--------|
| Cash | 18,000 | |
| Supplies | 4,800 | |
| Equipment | 12,200 | |
| Leidner, Capital | | 35,000 |
| Cash | 2,400 | |
| Fees Income | | 2,400 |
| Cash | 5,000 | |
| Leidner, Capital | | 5,000 |

| 4.8. | If, in Prob. 4.7, the Leidner Medical Group billed patients for the month for \$1,600, present the |

| 1 | |
| | |
| | |

| Accounts Receivable | 1,600 | |
|---|-------|-------|
| Fees Income | | 1,600 |
| To record services rendered on account. | | |

| 4.9. | If the Leidner Medical Group (see Probs. 4.7 and 4.8) received \$545 from patients who were |
|------|---|
| | billed last month, what entry would be necessary to record this information? |

| |
|-----------------|
| i (|
| |
| i i |
| |
| |
| |

SOLUTION

| Cash | 545 | |
|--------------------------|-----|-----|
| Accounts Receivable | | 545 |
| Received cash on account | | |

4.10. Refer to Probs. 4.8 and 4.9. When payment is received from billed patients (accounts receivable), why isn't the income account credited?

SOLUTION

Fees Income was recorded in the previous month, when the service was rendered. Under the accrual basis, income and expense are recorded in the period of service or use, not in the period of payment.

- **4.11.** Listed below are the January transactions for Big Ben Clock Repair Store, owned by David McDonald. Record them in general journal form.
 - Jan. 1 Invested \$7,000 cash and equipment with a book value of \$2,800
 - 3 Paid first month's rent, \$700
 - 5 Cash repairs, \$1,400
 - 7 Purchased supplies on account, \$325
 - 8 Repaired a grandfather clock on account, \$900
 - 8 Paid wages, \$275
 - 11 Purchased equipment, \$550 cash
 - 12 Cash repairs, \$2,700
 - 15 Purchased equipment on account, \$400
 - 17 Paid for advertising, \$325
 - 19 Withdrew \$500 for personal expenses
 - 21 Received \$500 on account from Jan. 8 transaction
 - 22 Paid wages, \$325
 - 25 Cash repairs, \$3,400
 - 26 Paid \$400 on account from Jan. 15 transaction
 - 29 Repaired a clock on account, \$345

4.15. During March, Larry Abrams completed the following transactions: (a) opened a dry cleaning store on March 1, 19X8, investing \$12,000 cash, \$6,000 in equipment, and \$4,000 worth of supplies; (b) bought \$2,600 worth of equipment on account from J. Laym, Inc., Invoice 101; (c) received \$2,800 from cash sales for the month; (d) paid rent, \$1,200; (e) paid salaries, \$600; (f) paid \$1,600 on account to J. Laym, Inc.; (g) withdrew \$500 for personal use; (h) used \$1,000 worth of supplies during the month.

- (1) Journalize each of the transactions.
- (2) Post each of them to their appropriate accounts.

| Notes Payable | | 12,000 |
| Vanguard Playhouse, Capital | | 4,000 |
| | \$25,450 | \$25,450 |
| | | |

Selected transactions for November were as follows:

- (a) Nov. 2 Paid \$1,000 due on the notes payable
- (b) 8 Paid \$3,000 on account
- (c) 15 Receipts for the 2-week period totaled \$8,400
- (d) 22 Bought an additional projector at a cost of \$15,500 with a cash down payment of \$5,000, the balance to be paid within 1 year
- (e) 30 Paid salaries of \$1,600

Using these data, transfer the October 31 balances to the ledger accounts below, prepare journal entries for the month of November, and post to the ledger accounts.

Adjusting and Closing Procedures

5.1 INTRODUCTION: THE ACCRUAL BASIS OF ACCOUNTING

As mentioned in Chap. 2, accounting records are kept on the accrual basis, except in the case of very small businesses. This means that revenue is recognized when earned, regardless of when cash is actually collected; and expense is matched to the revenue, regardless of when cash is paid out. Most revenue is earned when goods or services are delivered. At this time, title to the goods or services is transferred and a legal obligation to pay for such goods or services is created. Some revenue, such as rental income, is recognized on a time basis, and is earned when the specified period of time has passed. The accrual concept demands that expenses be kept in step with revenue, so that each month sees only that month's expenses applied against the revenue for that month. The necessary matching is brought about through a type of journal entry. In this chapter we shall discuss these adjusting entries, and also the closing entries through which the adjusted balances are ultimately transferred to balance sheet accounts at the end of the fiscal year.

5.2 ADJUSTING ENTRIES

(A) Covering Recorded Data

To adjust expense or income items that have already been recorded, a reclassification is required; that is, amounts have to be transferred from an asset, one of the prepaid expenses accounts (e.g., Prepaid Insurance), to an expense account (Insurance Expense). The following eight examples will show how adjusting entries are made for the principal types of recorded expenses.

EXAMPLE 1 Prepaid Insurance

Assume that on April 1, a business paid a \$1,200 premium for 1 year's insurance in advance. This represents an increase in one asset (prepaid expense) and a decrease in another asset (cash). Thus, the entry would be

April 1 Prepaid Insurance

Cash

1,200

1,200

At the end of April, one-twelfth of the \$1,200, or \$100, has expired (been used up). Therefore, an adjustment

has to be made, decreasing or crediting Prepaid Insurance and increasing or debiting Insurance Expense. The entry would be

April 30 Insurance Expense 100
Prepaid Insurance 100

Thus, \$100 would be shown as Insurance Expense in the income statement for April and the balance of \$1,100 would be shown as part of Prepaid Insurance in the balance sheet.

EXAMPLE 2 Prepaid Taxes

Assume that on April 1 a business made the quarterly property tax payment of \$600. At that time the transaction would be recorded with a debit to Prepaid Taxes and a credit to Cash for \$600. Since the payment covers 3 months, the tax expense will be \$200 per month. The entries would be as follows:

Apr. 1 Prepaid Property Taxes 600
Cash 600

30 Property Tax Expense 200
Prepaid Property Taxes 200

The balance to be shown on the balance sheet of April 30 for Prepaid Property Taxes would be \$400.

EXAMPLE 3 Prepaid Rent

Assume that on April 1 a business paid \$1,800 to cover rent for the next three months. The full amount would have been recorded as a prepaid expense in April. Since there is a 3-month period involved, the rent expense each month is \$600. The balance of Prepaid Rent would be \$1,200 at the beginning of May. The adjusting entry for April would be

Rent Expense 600 Prepaid Rent 600

EXAMPLE 4 Prepaid Interest

Assume that the business found it necessary to take out a loan of \$5,000 from the local bank on April 1. The period of the loan was 2 months, with interest of 12 percent a year. When interest is deducted in advance (discount), there is prepaid interest involved. On April 1 the entry would be

Cash 4,900 Prepaid Interest 100

Notes Payable 5,000

*The prepaid interest, an asset, was computed as follows:

 $$5,000 \times 12\% \text{ per year} \times 1/6 \text{ year} = 100

At the end of April the adjusting entry would be

Interest Expense 50
Prepaid Interest 50

EXAMPLE 5 Supplies

A type of prepayment that is somewhat different from those previously described is the payment for office or factory supplies. Assume that on April 1, \$400 worth of supplies were purchased. There were none on hand before. This would increase the asset Supplies and decrease the asset Cash. At the end of April, when expense and revenue are to be matched and statements prepared, a count of the amount of supplies on hand will be made. Assume that the inventory count shows that \$250 of supplies are still on hand. Then the amount consumed (used up) during April was \$150 (\$400 - \$250). The two entries would be as follows:

| Apr. 1 | Supplies | 400 | |
|--------|------------------|-----|-----|
| | Cash | | 400 |
| 30 | Supplies Expense | 150 | |
| 20 | Supplies | 150 | 150 |

Supplies Expense of \$150 will be included in the April income statement; Supplies of \$250 will be included as an asset on the balance sheet of April 30.

In each of the above examples, the net effect of the adjusting entry is to credit the same account as was originally debited.

EXAMPLE 6 Accumulated Depreciation

In the previous five adjusting entries, the balances of the assets mentioned (Prepaid Insurance, Prepaid Taxes. Prepaid Rent, Prepaid Interest, and Supplies) were all reduced. These assets usually lose their value in a relatively short period of time. However, assets that have a longer life expectancy (such as a building, equipment, etc.) are treated differently because the accounting profession wants to keep a balance sheet record of the equipment's original (historical) cost. Thus, the adjusting entry needed to reflect the true value of the long-term asset each year must allocate (spread) its original cost. This spreading concept is known as depreciation. In order to accomplish the objectives of keeping original cost of the equipment and also maintaining a running total of the depreciation allocated, we must create a new account entitled Accumulated Depreciation. This account, known as a contra asset (an account that has the opposite balance to its asset), summarizes and accumulates the amount of depreciation over the equipment's total useful life. Assume that machinery costing \$15,000 was purchased on February 1 of the current year and was expected to last 10 years. With the straight-line method of accounting (i.e., equal charges each period), the depreciation would be \$1,500 a year, or \$125 a month. The adjusting entry would be as follows:

| Depreciation Expense | 125 | |
|--------------------------|-----|-----|
| Accumulated Depreciation | | 125 |

At the end of April, Accumulated Depreciation would have a balance of \$375, representing 3 months' accumulated depreciation. The account would be shown in the balance sheet as follows:

| Machinery | \$15,000 | |
|--------------------------------|----------|----------|
| Less: Accumulated Depreciation | 375 | \$14,625 |

EXAMPLE 7 Unearned Rent

In the following two examples, a new type of account is introduced. Known as Unearned Rent (Example 7) and Unearned Commission (Example 8), these accounts are liabilities and represent income that was received before the service was completed. In other words, the income was not earned. After a period of time, when the income is actually earned, an adjusting entry is made to reduce the liability account, and the earned income account is then recorded.

Assume that a landlord received \$1,800 rent in advance (\$600 per month) on April 1. The following entry would be made:

April 1 Cash 1,800 Unearned Rent 1,800

At the end of April, one month's rent has been earned, and Unearned Rent would be debited:

Apr. 30 Unearned Rent 600*

Rent Income 600

*(\$1,800 ÷ 3 months)

EXAMPLE 8 Unearned Commissions

Assume that \$300 was received and recorded on April 1, for commissions for 3 months. At the end of April, Unearned Commissions would be debited, and Earned Commissions Income would be credited, for \$100. The entries would be as follows:

| Apr. 1 | Cash | 300 | |
|--------|-----------------------------|-----|-----|
| | Unearned Commissions | | 300 |
| 30 | Unearned Commissions | 100 | |
| | Earned Commissions Income | | 100 |

(B) Covering Unrecorded Data

In the previous section we discussed various kinds of adjustments to accounts to which entries had already been made. Now we consider those instances in which an expense has been incurred or an income earned but the applicable amount has not been recorded during the month. For example, if salaries are paid on a weekly basis, the last week of the month may run into the next month. If April ends on a Tuesday, then the first 2 days of the week will apply to April and will be an April expense, whereas the last 3 days will be a May expense.

To arrive at the proper total for salaries for the month of April, we must include, along with the April payrolls that were paid in April, the 2 days' salary that was not paid until May. Thus, we make an entry to accrue the 2 days' salary. To accrue means to collect or accumulate.

The following two examples show adjusting entries for the most important types of unrecorded expenses (accrued expenses).

EXAMPLE 9 Accrued Salaries

Assume that April 30 falls on Tuesday. Then, 2 days of that week will apply to April and 3 days to May. The payroll is \$500 per day, \$2,500 per week. For this example, \$1,000 would thus apply to April (Monday and Tuesday) and \$1,500 to May (Wednesday, Thursday, and Friday). The entry would be as follows:

Apr. 30 Salaries Expense 1,000 Salaries Payable 1,000

When the payment of the payroll is made—say, on May 8—the entry would be as follows:

May 8 Salaries Expense 1,500
Salaries Payable 1,000
Cash 2,500

As can be seen above, \$1,000 was charged to expense in April and \$1,500 in May. The debit to Accrued Salaries Payable of \$1,000 in May merely canceled the credit entry made in April, when the liability was set up for the April salaries expense.

EXAMPLE 10 Interest Payable

At the end of the accounting period, the interest accrued on any business liability should be recognized in the accounts. Assume that instead of interest on the \$5,000 loan described in Example 4 being prepaid, the interest is due when the loan is due. In that case, there would be accrued interest for April of \$50, and the following adjusting entries would be required for April:

| April 1 | Cash | 5,000 | |
|---------|------------------|-------|-------|
| | Notes Payable | | 5,000 |
| 30 | Interest Expense | 50 | |
| | Interest Payable | | 50 |

Most businesses will have some *unrecorded revenue* (accrued income), that is, income earned but not yet received. Generally, this will be interest earned on notes from customers, rent earned on premises rented to a tenant, or various other items for which income has been earned but has not yet been collected.

EXAMPLE 11 Interest Receivable

A business holds a note receivable from a customer for \$10,000. The note, due in 3 months, bears interest at 12 percent and was issued on March 1. The total interest would be \$300 ($$10,000 \times 12\%$ per year \times 1/4 year). By the end of April, interest for 2 months has been earned. The following adjusting entry would be required for April:

| Apr. 30 | Interest Receivable | 100 | |
|---------|---------------------|-----|-----|
| | Interest Income | | 100 |

When the note is settled by the customer in May, he would pay the principal plus the interest, as shown below:

| May 31 | Cash | | 10,300 | | |
|--------|------|---------------------|--------|--------|--|
| | | Note Receivable | | 10,000 | |
| | | Interest Receivable | | 200 | |
| | | Interest Income | | 100 | |

As can be seen, the interest carned was \$100 a month. Therefore, Interest Receivable was debited \$100 for March and \$100 for April. The same entry was not necessary for May, since the note was settled at the end of May.

5.3 CLOSING ENTRIES

The information for the month-to-month adjusting entries and the related financial statements can be obtained from the work sheet, whose use will be fully described in Chap. 6. After the income statement and balance sheet have been prepared from the work sheet for the last month in the fiscal year, a summary account—known as Income Summary—is set up. Then, by means of *closing entries*, each income account is debited so as to produce a zero balance, and the total amount for the closed-out accounts is credited to Income Summary. Similarly, the individual expense accounts are closed out by crediting them and their total amount is debited to the summary account. Thus, the new fiscal year starts with zero balances in the income and expense accounts, whereas the Income Summary balance gives the net income or the net loss for the old year.

EXAMPLE 12

To illustrate the closing procedure, we refer to the accounts of Alan Bagon.

| Salaries Expense | 200 | |
| Supplies Expense | 200 | |
| | \$8,500 | \$8,500 |
| | | ====== |

The closing entries are as follows.

(1) Close out revenue accounts. Debit the individual revenue accounts and credit their total to Income Summary. Here, there is only one income account.

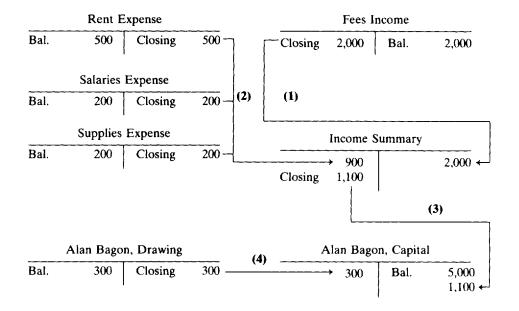

| Apr. 30 | Fees Income | 2,000 | |
|---------|----------------|-------|------|
| | Income Summary | 2 | 000, |

(2) Close out expense accounts. Credit the individual expense accounts and debit their total to Income Summary.

| Apr. 30 | Income Summary | 900 | |
|---------|------------------|-----|-----|
| | Rent Expense | | 500 |
| | Salaries Expense | | 200 |
| | Supplies Expense | | 200 |

(3) Close out the Income Summary account. If there is a profit, the credit made for total income in (1) above will exceed the debit made for total expense in (2) above. Therefore, to close out the balance to zero, a debit entry will be made to Income Summary. A credit will be made to the Capital account to transfer the net income for the period. If expenses exceed income, then a loss has been sustained and a credit will be made to Income Summary and a debit to the Capital account. Based on the information given above, the entry is

(4) Close out the Drawing account. The Drawing account is credited for the total amount of the drawings for the period, and the Capital account is debited for that amount. The difference between net income and drawing for the period represents the net change in the Capital account for the period. The net income of \$1,100 less drawings of \$300 results in a net increase of \$800 in the Capital account. The closing entry for the Drawing account is

Notes:

- (1) Close Fees Income account to Income Summary.
- (2) Close all expense accounts to Income Summary.
- (3) Close Income Summary to Capital.
- (4) Close the Drawing account to Capital.

After the closing entries (1) through (4) are made, the various accounts will appear as below. The income account, the expense accounts, and the Drawing account are ruled off (closed out), thus showing no balance. The net profit for the period and the Drawing account balance were transferred to Alan Bagon, Capital, a balance sheet account.

| Cash | | | Equipment | | Alan Bagon, Capital | | | | | |
|------|-----------|------------|-----------|----------|---------------------|-------|------------|--------------|--|----------|
| Bal. | 4,700 | | Bal. | 2,500 | | | (4) | 300 | 5,000 1,100 | Bal. (3) |
| | Supplie | es . | | Account | s Payable | : | Α | lan Bago | n, Drawii | ng |
| Bal. | 100 | | | | 1,500 | Bal. | Bal. | 300 | 300 | (4) |
| | Fees Inco | me | | Salaries | Expense | | | Income | Summary | |
| (1) | 2,000 2 | 2,000 Bal. | Bal. | 200 | 200 | (2) | | | . | |
| | | | | | { | | (2) (3) | 900 1,100 | 2,000 | (1) |
| | Rent Expe | ense | | Supplies | Expense | | | 2,000 | 2,000 | |
| Bal. | 500 5 | 600 (2) | Bal. | 200 | 200 | (2) | | | | |

The above transactions are based on the sole proprietorship form of business. If this business were a corporation (see p. 263), the Capital account would be replaced by a new account known as "Retained Earnings."

5.4 POST-CLOSING TRIAL BALANCE

After the closing entries are made, only balance sheet accounts—assets, liabilities, and capital—remain open. A trial balance of these accounts, known as a *post-closing trial balance*, is then taken.

EXAMPLE 13

| Alan Bagon |
|----------------------------|
| Post-Closing Trial Balance |
| April 30, 19X8 |

| Cash | \$4,700 | |
|---------------------|---------|---------|
| Supplies | 100 | |
| Equipment | 2,500 | |
| Accounts Payable | | \$1,500 |
| Alan Bagon, Capital | | 5,800 |
| | \$7,300 | \$7,300 |

5.5 REVERSING ENTRIES

The reversing entry (which is optional) is an accounting method that reverses a specific adjusting entry that was made at the end of the previous period (not all adjusting entries need to be reversed). The reversing entry is made at the beginning of a period and, as a result, transactions for the remainder of the current year are routine. The amounts used in the reversing entry are identical to those used in the adjusting entry. The rule to determine whether or not to reverse is as follows: "Any adjusting entry that creates (not there before) an asset or a liability has to be reversed."

EXAMPLE 14

Assume that Larry Pile receives a \$500 weekly (\$100 daily) salary. The entry to record the salary for the week ending Friday, December 27, 19X8, would be

| (1) | Salary Expense | 500 | |
|-----|----------------|-----|-----|
| | Cash | | 500 |

However, on December 31, 19X8, the accrual of salaries payable must be made for Monday and Tuesday, December 30 and 31.

| (2) | Salary Expense | 200 | |
|-----|------------------|-----|-----|
| | Salaries Pavable | | 200 |

Since Salaries Payable is a liability and was created by an adjusting entry, a reversing entry would be needed at the beginning of January, 19X9:

(3) Salaries Payable

| Salar | y Expense | 200 | | |
|--|----------------------|------------------------|--------|-----|
| | Salaries E | Expense | | |
| Payments (JanDec. 26, 19X8) Dec. 27 payment Adjusting entry 12/31/X8 | 24,000 500 200 | Closing entry 12/31/X8 | 24,700 | |
| | | Reversing entry 1/1/X9 | 200 | (3) |

| _ | | - | 1 1 |
|----|--------|-----|-------|
| Na | laries | Pay | /anle |
| | | | |

| | | | Adjusting entry 12/31/X8 | 200 | (2) |
|-----|------------------------|-----|--------------------------|-----|-----|
| (3) | 1/1/X9 Reversing entry | 200 | Balance 1/1/X9 | 200 | (3) |

Note that Salaries Payable had been recorded as a liability on the balance sheet (12/31/X8) and has been canceled as of 1/1/X9. The expense account shows a credit of \$200, which will be reduced when the salaries of \$500 are paid on Friday, January 3, 19X9.

Summary

| 1. | The basis of accounting that recognizes revenue when earned, regardless of when cash is received, and matches the expenses to the revenue, regardless of when cash is paid out, is known as the |
|-----|---|
| 2. | An adjusting entry that records the expired amount of prepaid insurance would debit the account. |
| 3. | Supplies on hand is classified as a(n) and appears in the, while supplies expense is a(n) and appears in the |
| 4. | Accumulated Depreciation appears in the balance sheet as a(n) from the related asset. |
| 5. | Accrued Salaries is treated in the balance sheet as $a(n)$, whereas Salaries Expense appears in the income statement as $a(n)$ |
| 6. | Income that has been earned but not yet received is known as |
| 7. | Expenses that have been incurred but not yet paid for are known as |
| 8. | The revenue and expense accounts are closed out to the summary account known as |
| 9. | For a sole proprietorship, all income, expense, drawing, and summary accounts will be netted and closed into the account. |
| 10. | The post-closing trial balance will involve only, and accounts. |

Answers: 1. accrual basis; 2. Insurance Expense; 3. asset, balance sheet, expense, income statement; 4. deduction; 5. liability account, expense account; 6. unrecorded revenue or accrued income; 7. unrecorded expenses or accrued expenses; 8. Income Summary; 9. Capital; 10. asset, liability, capital

| Willet Wilkinson, Capital | | 2,000 |

| | Income | Summa | ıry | Willet Wilkir | nson, Capital |
|------------|-----------------|-------|--------|---------------|--------------------------|
| (b) (c) | 10,000 2,000 | (a) | 12,000 | | Bal. 20,000 (c) 2,000 |
| (-) | 12,000 | | 12,000 | I | |

5.18. If all the revenue and expense accounts have been closed at the end of the fiscal year, what do the debit and credit figures in the account below indicate? What is the net profit or loss?

| Income Summary | | | | |
|----------------|---------|--|--|--|
| 98,000 | 102,000 | | | |

SOLUTION

The debit amount represents \$98,000 of expenses, whereas the credit amount of \$102,000 depicts income for the period. The net balance of the account, \$4,000 (\$102,000 - \$98,000), shows the net income for the period and will be closed out to the Capital account.

5.19. Listed below in various selected T accounts are the account balances. Prepare the closing entries. Remember, not all accounts are to be closed out.

| | i | | | | | | |

Note that all income and expense accounts have been closed out. No balances exist in any of the above accounts except Capital, which now has a balance of \$12,500.

5.24. Listed below are T accounts of the Kapela Realty Co. with the balances before adjusting. Make the necessary adjusting entries. (The year ends December 31, 19X8.)

| Supplies | Prepaid Advertising | Prepaid Insurance |
|----------------------|--------------------------|-------------------|
| 1,250 | 975 | 2,400 |
| Unearned Rent Income | Accumulated Depreciation | |
| 6,000 | 1,600 | |

Adjustments at year end:

- (a) Depreciation Expense, \$800.
- (b) Inventory of store supplies on December 31, \$300.
- (c) Insurance was for 2 years, starting July 1, 19X8.
- (d) Rent income received was for 3 months, starting on December 1, 19X8.
- (e) Advertising was for 3 months, starting November 1, 19X8.

Examination II

Chapters 4-5

- 1. Compare the journal and the ledger.
- 2. What effect does the incorrect posting of a debit as a credit have on the trial balance?
- 3. Distinguish between prepaid expenses and accrued expenses.
- 4. What are adjusting entries? Closing entries?
- 5. Interpret the balance in the Supplies account at the end of the accounting period (a) before adjustment; (b) after adjustment.
- 6. The balances of the accounts of the Judith Playhouse, as of November 30, were as follows:

Judith Playhouse Trial Balance November 30

| Cash | \$10,000 | |
|---------------------------|----------|----------|
| Accounts Receivable | 2,100 | |
| Supplies | 600 | |
| Equipment | 12,000 | |
| Building | 9,000 | |
| Accounts Payable | | \$ 6,500 |
| Notes Payable | | 12,000 |
| Judith Playhouse, Capital | | 15,200 |
| | \$33,700 | \$33,700 |

Selected transactions for the month of December were

- (a) Bought new theatrical equipment for \$3,000, paying half in cash and giving our note for the balance
- (b) Paid \$1,000 due on the notes payable
- (c) Receipts for the 2-week period (admissions income) totaled \$9,600
- (d) Paid utilities, \$150
- (e) Paid \$1,000 for 5-year insurance policy on the theater
- (f) Paid monthly salaries, \$1,250

Journalize the transactions.

- 7. The Eugene Don Company's trial balance shows Fees Income of \$30,000 and the following expenses: salaries, \$8,000; rent, \$16,000; and depreciation, \$1,500. If the Capital account balance is \$30,000 and the Drawing account balance is \$1,000, what closing entries are needed?
- 8. (a) Weekly salaries of \$8,000 are payable on Friday, for a 5-day week. What is the adjusting entry if the fiscal period ends on Wednesday?

- (b) An insurance policy covering a 4-year period was purchased on February 1, for \$1,200. What is the adjusting entry on December 31?
- (c) Office supplies of \$700 were debited to Office Supplies. At the end of the month, the account shows \$300 worth still on hand. Prepare the adjusting entry.
- 9. In the following, assume a fiscal year extending from January 1 through December 31.
 - (a) A machine costing \$8,000 was purchased on October 31 and is being depreciated at the rate of 10 percent per year. What amount will appear as the adjusting entry on December 31?
 - (b) An insurance policy covering a 6-year period was purchased on March 1 for \$1,800. What amount will appear as an expense on the income statement at the end of the year? What amount will appear on the balance sheet as an asset?
- 10. After all revenue and expense accounts of the Gold Silver Company were closed at the end of the year, the Income Summary had a debit balance of \$125,000 and a credit balance of \$190,000. The Capital account had a credit balance of \$72,000, and the Drawing account had a debit balance of \$12,000. Journalize the closing entries.
- 11. Listed below are the T accounts and the necessary adjustments for the year ending June 30, 19X8. Make the adjusting and reversing entries when appropriate. Year-end balances before adjustments:

| Supplies | Accumulated Depreciation | Prepaid Rent |
|------------------|--------------------------|--------------|
| 2,100 | 2,000 | 5,000 |
| Salaries Expense | | |
| 24,000 | | |

- (a) Supplies on hand, June 30, 19X8, \$700
- (b) Depreciation Expense, \$500
- (c) Rent was for a 5-month period starting April 1, 19X8
- (d) Salaries accrued (owed, not yet paid), \$1,200
- 12. Prepare an income statement, statement of owner's equity, and balance sheet based on the following data: On January 1, 19X8, the Mary Moore Co. had capital of \$15,200. On December 31, the end of the fiscal year, the balances after adjustments of assets, liabilities, revenue, and expenses were as follows:

| Accounts Payable | \$3,100 |
|--------------------------|---------|
| Accumulated Depreciation | 500 |
| Cash | 14,800 |
| Depreciation Expense | 500 |
| Drawing | 2,600 |
| Equipment | 14,400 |
| Fees Income | 37,700 |
| Insurance Expense | 800 |
| Miscellaneous Expense | 1,850 |
| Prepaid Insurance | 830 |

| Prepaid Rent | 500 |
|------------------|--------|
| Rent Expense | 3,000 |
| Salaries Expense | 16,500 |
| Salaries Payable | 200 |
| Supplies | 570 |
| Supplies Expense | 350 |

Answers to Examination II

- 1. The journal is a book of original entry that contains a *chronological* record of transactions. Each transaction is recorded first in the journal, which specifies the accounts to be debited and credited, along with a brief explanation of the transaction. The ledger is the complete set of accounts. It takes various physical forms, depending on whether the accounting system is manual or computerized.
- 2. The trial balance will be out of balance by twice the amount of the incorrect posting.
- 3. Prepaid expenses are those paid in advance of consumption; accrued expenses are those for which the consumption precedes the payment.
- 4. Adjusting entries are the entries required at the end of the accounting period to make the accounts properly reflect the results of operations for the period and the financial position at the end of the period. Closing entries are the entries that summarize the activities of the period, matching the inflow of income with the outflow of expenses to arrive at the net increase or decrease in owner's equity for the period. They separate the operations of one period from those of another. The accounts that are closed are the nominal or temporary accounts, which are really only extensions of the capital accounts.
- 5. (a) The balance before adjustment is the balance at the beginning of the period plus the amount purchased during the period. It includes both the amount on hand and the amount used.
 - (b) The balance after adjustment includes only the inventory of supplies on hand at the end of the period. The amount used has been transferred to the Supplies Expense account.

| 6. | (a) | Equipment | 3,000 | |

Summarizing and Reporting via the Service Business Work Sheet

6.1 INTRODUCTION

The recording of transactions and the adjusting and closing procedures have been discussed in previous chapters. It is reasonable to expect that among the hundreds of computations and clerical tasks involved, some errors will occur, such as posting a debit as a credit. Today many financial records are maintained on the computer or on mechanical bookkeeping systems. The use of machine time to correct errors can be very costly and can bring painful questions from high financial executives.

One of the best ways yet developed of avoiding errors in the permanent accounting records, and also of simplifying the work at the end of the period, is to make use of an informal record called the work sheet.

6.2 WORK SHEET PROCEDURES FOR A SERVICE BUSINESS

We are already familiar with the types of accounts found in a service business—i.e., a business in which revenue comes from services rendered—so we shall first discuss the work sheet for such a business.

The work sheet is usually prepared in pencil on a large sheet of accounting stationery called analysis paper. On the work sheet, the ledger accounts are adjusted, balanced, and arranged in proper form for preparing the financial statements. All procedures can be reviewed quickly, and the adjusting and closing entries can be made in the formal records with less chance of error. Moreover, with the data for the income statement and balance sheet already proved out on the work sheet, these statements can be prepared more quickly.

For a typical service business we may suppose the work sheet to have eight money columns, namely, a debit and a credit column for each of four groups of figures: (1) trial balance, (2) adjustments, (3) income statement, and (4) balance sheet. A ten-column work sheet also is used, consisting of (1) trial balance, (2) adjustments, (3) adjusted trial balance, (4) income statement, and (5) balance sheet. The adjusted trial balance columns simplify the extension to the financial statement columns, but for the illustrations in this chapter, the eight-column work sheet will be used. The steps in completing the work sheet are then:

- 1. Enter the trial balance figures from the ledger.
- 2. Enter the adjustments.
- 3. Extend the adjusted figures to either the income statement or balance sheet columns.
- 4. Total the income statement columns and the balance sheet columns.
- 5. Enter the net income or net loss.

EXAMPLE 1

Prepare the work sheet for the Thomas Company, whose ledger balances follow.

Thomas Company Trial Balance December 31, 19X8

| Cash | \$ 3,510 | |
|--------------------------|----------|----------|
| Accounts Receivable | 4,010 | |
| Supplies | 1,050 | |
| Prepaid Rent | 400 | |
| Equipment | 18,000 | |
| Accumulated Depreciation | | \$ 3,000 |
| Notes Payable | | 4,000 |
| Accounts Payable | | 2,380 |
| Taxes Payable | | 400 |
| Jane Thomas, Capital | | 13,690 |
| Jane Thomas, Drawing | 2,000 | |
| Service Fees Income | | 10,500 |
| Salaries Expense | 4,600 | |
| Miscellaneous Expense | 400 | |
| | \$33,970 | \$33,970 |

- 1. Enter the trial balance figures. The balance of each general ledger account is entered in the appropriate trial balance column of the work sheet (see Fig. 6-1). The balances summarize all the transactions for the year ending December 31 before any adjusting entries have been applied.
- Enter the adjustments. After the trial balance figures have been entered and the totals are in agreement, the adjusting entries should be entered in the second pair of columns. The related debits and credits are keyed by letters so that they may be rechecked quickly for any errors. The letters should be in proper sequence, beginning with asset accounts at the top of the page.
 - (a) Supplies. In order to determine the amount of supplies used, it is necessary to make a count of the amount on hand on December 31. The amount was found to be \$550. The balance at the beginning of the year plus supplies bought amounted to \$1,050. Therefore,

Thomas Company Work Sheet Year Ended December 31, 19X8

| Account | | rial ance | Ad | ljusti | ments | | come tement | | ance eet |
|----------------------|--------|--------------|----------|--------|----------|--------|----------------|--------|-------------|

| Jane Thomas, Capital | | 13,690 | | 7 | | | | | 13,690 |
| Jane Thomas, Drawing | 2,000 | | | | | | | 2,000 | |
| Service Fees Income | | 10,500 | | | | | 10,500 | | |
| Salaries Expense | 4,600 | | (d) 20 | 00 | | 4,800 | | | |
| Misc. Expense | 400 | | | | | 400 | | | |
| | 33,970 | 33,970 | | | | | | 1 | |
| | | | | | | | | | |
| Supplies Expense | | | (a) 50 | 00 | | 500 | | | |
| Rent Expense | | | (b) 10 |)0 | | 100 | | | |
| Depreciation Expense | | | (c) 1,80 | 00 | | 1,800 | | | |
| Salaries Payable | | | | | (d) 200 |) | | | 200 |
| Interest Expense | | | (e) 4 | 10 | | 40 | | | |
| Interest Payable | | | | | (e) 40 |) | | | 40 |
| | | | 2,64 | 10 | 2,640 | | 10,500 | 28,370 | 25,510 |
| Net Income | | | | = [| | 2,860 | | | 2,860 |
| | | | | | | 10,500 | 10,500 | 28,370 | 28,370 |

Fig. 6-1

\$1,050 - \$550 = \$500 worth of supplies have been used. There is no account for supplies expense, so the account name must be listed at the bottom of the work sheet. The adjusting entry is

Supplies Expense 500
Supplies 500

(b) Rent. Rent of \$400 for 4 months was paid in advance on December 1. Therefore, the original amount charged to Prepaid Rent must be reduced by \$100, the amount of rent for December. The account name Rent Expense should be listed at the bottom of the work sheet. The adjusting entry for December is

Rent Expense 100
Prepaid Rent 100

(c) Depreciation. The equipment is being written off over a 10-year period using the straight-line method. Thus, \$1,800 a year ($$18,000 \div 10$) is being charged to expense. The title Depreciation Expense will also have to be written in at the bottom of the work sheet. The entry will be

> Depreciation Expense 1,800 Accumulated Depreciation 1.800

(d) Salaries. The salaries amount in the trial balance column would include only the payments that have been recorded and paid during the year. The portion that was earned in December 19X8 but paid in January 19X9, because the weekly pay period ended in January, would not be included. If the amount is \$200, the accrued entry would be

> Salaries Expense 200 Salaries Payable 200

The account title Salaries Payable will also have to be listed on the work sheet.

(e) Interest. On the notes payable, there is accrued interest for 1 month. Assuming that the note bears 12 percent interest, the accrued interest would be \$40 (\$4,000 \times 12% \times 1/12). The entry will be

> Interest Expense 40 Interest Payable 40

- 3. Extend the adjusted figures to either the income statement or balance sheet columns. The process of extending the balances horizontally should begin with the account at the top of the sheet. The revenue and expense accounts should be extended to the income statement columns; the assets, liabilities, and capital to the balance sheet columns. Each figure is extended to only one of the columns.
- 4. Total the income statement columns and the balance sheet columns. The difference between the debit and credit totals in both sets of columns should be the same amount, which represents net income or net loss for the period.

| Tota | ıl |
|------|--------|
| Net | Income |

| Income Statement | | Balance Sheet | | | |
|------------------|--------|---------------|--------|--|--|
| Dr. | Cr. | Dr. | Cr. | | |
| 7,640 | 10,500 | 28,370 | 25,510 | | |
| 2,860 | | | 2,860 | | |
| 10,500 | 10,500 | 28,370 | 28,370 | | |
| | | === | | | |

5. Enter the net income or net loss. The credit column total in the income statement is \$10,500; the debit column total is \$7,640. The credit column, or income side, is the larger, representing a net income of \$2,860. Since net income increases capital, the net income figure should go on the credit side of the balance sheet. The balance sheet credit column total of \$25,510 plus net income of \$2,860 totals \$28,370, which equals the debit column total. Since both the income statement columns and balance sheet columns are in agreement, it is a simple matter to prepare the formal income statement and balance sheet.

If there had been a loss, the debit or expense column in the income statement would have been the larger and the loss amount would have been entered in the credit column in order to balance the two columns. As a loss would decrease the capital, it would be entered in the balance sheet debit column.

After the work sheet has been completed, financial statements should be prepared. Based on the work sheet in Fig. 6-1 (page 127), the following statements are prepared:

Thomas Company Income Statement Year Ended December 31, 19X8

| Service Fees Income | | \$10,500 |
|-----------------------|---------|----------|
| Expenses | | |
| Salaries Expense | \$4,800 | |

Solved Problems

- **6.1.** Prepare adjusting entries for the two separate situations below.
 - (a) P. Jones had supplies at the beginning of the month of \$745. At the end of the month, there remained a balance of \$325. Prepare the adjusting entry needed to reflect the above data.

| (b) | The Bernie Hirsh Co. had supplies at the beginning of the month of \$745. At the end of |
|-----|---|
| | the month, it was determined that \$325 had been used. Prepare the adjusting entry needed |
| | to reflect the above data. |

| Supplies Expense | 420 | |

- **6.2.** A truck bought on January 5, 19X8, for \$14,000 has an estimated life of 7 years.
 - (a) What is the entry to record the depreciation expense as of December 31, 19X8?
 - (b) How would this information be presented on the balance sheet at the end of the year?

| | | Dr. | Cr. |
|-----|---------------|-----|-----|
| (a) | | | |
| | | | |
| | Balance Sheet | | |
| (b) | | | |
| | | | |

| | | Dr. | Cr. |
|-----|---|----------|----------|
| (a) | Depreciation Expense | 2,000 | |
| | Accumulated Depreciation (\$14,000 ÷ 7) | | 2,000 |
| | | <u> </u> | <u>.</u> |

Balance Sheet

| (b) | Truck | 14,000 | |
|-----|--------------------------------|--------|--------|
| | Less: Accumulated Depreciation | 2,000 | 12,000 |

Note: The book value of the truck on December 31 would be \$12,000.

- (a) Present the adjusting entry needed to record the information.
- (b) Based on part (a), how would this information be presented on the balance sheet as of December 31, 19X9, fifteen months later?

| | Dr. | Cr. |
|-----|-----|-----|
| (a) | | |
| | | |

Balance Sheet

| (b) | | |
|-----|--------------|--|
| | | |

SOLUTION

| | | Dr. | Cr. |
|-----|--------------------------|------|-----|
| (a) | Depreciation Expense | 500* | |
| | Accumulated Depreciation | | 500 |

*\$14,000 ÷ 7 years = \$2,000:
$$\frac{3 \text{ months}}{12 \text{ months}} \times $2,000 = $500$$

Balance Sheet

| (b) | Truck | 14,000 | |
|-----|--------------------------------|--------|--------|
| | Less: Accumulated Depreciation | 2,500* | 11,500 |

^{* 500} for 19X8

2,000 for 19X9

\$2,500 Accumulated Depreciation

6.4. An \$8,000 note payable written on November 1 for 180 days bears interest at 12 percent. What is the adjusting entry as of December 31?

| | | |
|------|------|--|
| | | |
| | | |
| | | |
| | | |
| | | |

SOLUTION

| Interest Expense | 160 | |
|------------------|-----|-----|
| Interest Payable | | 160 |

Note: The amount of interest expense in 19X8 from November 1 to December 31 (60 days) is computed as follows:

$$$8,000 \times 12\% \times 60/360$$

$$\frac{\$8,000}{1} \times \frac{12}{100} \times \frac{1}{6} = \$160$$

- **6.5.** Journalize the following adjusting entries at December 31:
 - (a) Supplies on hand: January 1, \$950; December 31, \$460.
 - (b) The Prepaid Rent account has a balance of \$3,000, representing rent for 1 year paid in advance on March 1.

| Supplies | | 490 |
| Rent Expense | 2,500* | |
| Prepaid Rent | | 2,500 |
| Depreciation Expense | 450 | |
| Accumulated Depreciation | | 450 |
| Salaries Expense | 280 | |
| Salaries Payable | | 280 |

^{*}Rent expense for expired 10 months of the year, $10/12 \times \$3,000 = \$2,500$

6.6. The following selected accounts are taken from the ledger of C. Gold Co. Place check marks in the appropriate columns to which the accounts will be extended in the work sheet.

| | Income S | Statement | Balance | e Sheet |
|-------------------------|----------|-----------|---------|---------|
| Title | Dr. | Cr. | Dr. | Cr. |
| 1. Cash | | | | |
| 2. Accounts Receivable | | | | |
| 3. Notes Receivable | | | | |
| 4. Accounts Payable | | | | |
| 5. C. Gold, Drawing | | | | |
| 6. C. Gold, Capital | | | | |
| 7. Fees Income | | | | |
| 8. Depreciation Expense | | | | |
| 9. Salaries Payable | | | | |

| | Income S | Statement | Balanc | e Sheet |
|-------------------------|----------|-----------|----------|-----------|
| Title | Dr. | Cr. | Dr. | Cr. |
| 1. Cash | | | √ | |
| 2. Accounts Receivable | | | √ | |
| 3. Notes Receivable | | j | / | |
| 4. Accounts Payable | | | | $\sqrt{}$ |
| 5. C. Gold, Drawing | | | V | |
| 6. C. Gold, Capital | | | | √ |
| 7. Fees Income | | √ | | |
| 8. Depreciation Expense | √ | | | |
| 9. Salaries Payable | | | | √ |

6.7. From the partial view of the work sheet below, determine the net income or loss.

| Income | Statement | Balanc | e Sheet |
|--------|-----------|--------|---------|
| Dr. | Cr. | Dr. | Cr. |
| | | | |
| | | | |
| | | | |
| 29,500 | 36,200 | 52,400 | 45,700 |

SOLUTION

36,200 (total credits of income statement)

-29,500 (total debits of income statement)

6,700 (net income)

| Income S | tatement | Balance | e Sheet |
|----------|----------|---------|---------|
| Dr. | Cr. | Dr. | Cr. |
| 29,500 | 36,200 | 52.400 | 45,700 |
| 6,700 | | ,,,,, | 6,700 |
| 36,200 | 36,200 | 52,400 | 52,400 |

Net Income

6.8. Complete the work sheet below. What do the figures tell the reader?

| Income S | Statement | Balanc | e Sheet |
|----------|-----------|--------|---------|
| Dr. | Cr. | Dr. | Cr. |
| 46,200 | 42,000 | 65,600 | 69,800 |
| | ? | ? | |
| ? | ? | ? | ? |

| _ | Income Statement | | Balance Sheet | |
|----------|------------------|--------|---------------|--------|
| - | Dr. | Cr. | Dr. | Cr. |
| - | 46,200 | 42,000 | 65,600 | 69,800 |
| Net Loss | - | 4,200 | 4,200 | |
| _ | 46,200 | 46,200 | 69,800 | 69,800 |
| _ | | | | |

The above figures show that the firm has experienced a net loss of \$4,200. This is because more expenses (\$46,200) have been reported than income (\$42,000). As a loss decreases capital, it would be entered in the balance sheet debit column.

- **6.9.** Below is the work sheet for the Juaz Company. Prepare adjusting entries on the work sheet based on the following year-end data:
 - (a) Supplies on hand, \$3,000
 - (b) Insurance expired during the year, \$600
 - (c) Depreciation on equipment, \$1,500
 - (d) Salaries accrued, \$1,000

Juaz Company Work Sheet Year Ended December 31, 19X8

Summarizing and Reporting via the Merchandising Business Work Sheet

7.1 WORK SHEET PROCEDURES FOR A MERCHANDISING BUSINESS

Merchandising (trading) businesses are those whose income derives largely from buying or selling goods rather than from rendering services. In addition to the accounts discussed in Chap. 6, the work sheet for a merchandising business will carry new accounts, and headings such as Inventory, Cost of Goods Sold, and Purchases. Let us discuss these new accounts separately, and then illustrate their handling on the work sheet.

7.2 INVENTORY AND PURCHASES TREATMENT

Inventory represents the value of goods on hand at either the beginning or the end of the accounting period. The beginning balance would be the same amount as the ending balance of the previous period. Generally, not all merchandise purchased is sold in the same period; so unsold merchandise must be counted and priced, and the total recorded in the ledger as Ending Inventory. The amount of this inventory will be shown as an asset in the balance sheet. The dollar amount of goods sold during the period will be shown as a classified heading known as Cost of Goods Sold in the income statement. (See Sec. 7.4.)

EXAMPLE 1

Assume that the January 1 (beginning) inventory is \$20,000 and the December 31 (ending) inventory is \$26,000. Two adjusting entries are required to show the replacement of the old by the new inventory:

Entry 1 Income Summary 20,000

Merchandise Inventory 20,000

Entry 2 Merchandise Inventory 26,000

Income Summary 26,000

The effect on the inventory and the income summary balances is as follows:

| | Merchandis | e Inventory | | | Income S | Summary | |
|---------|------------|-------------|--------|---------|----------|---------|--------|
| Jan. 1 | 20,000 | Dec. 31 | 20,000 | Dec. 31 | 20,000 | Dec. 31 | 26,000 |
| Dec. 31 | 26,000 | | | | | | |
| | ₹ | | | | | | |

On the work sheet (Fig. 7-1), the \$20,000 balance of the Inventory account that appears in the trial balance represents the inventory at the beginning of the year. This amount will be transferred to Income Summary.

(a) Income Summary 20,000

Merchandise Inventory 20,000

The inventory at the end of the current year, \$26,000, is an asset and will be adjusted on the work sheet.

(a) Merchandise Inventory 26,000 Income Summary 26,000

Unlike the procedure for other accounts, both the debit and the credit amounts for Income Summary are extended to the income statement in Fig. 7-1. This is done because the amounts of the debit adjustment (which represents the beginning inventory of \$20,000) and of the credit adjustment (which represents the ending inventory of \$26,000) are needed to prepare the income statement. It would not be practical to net the two items, as the single figure would not give enough information regarding the beginning and ending inventories. The merchandise inventory of \$26,000 (ending) is extended to the debit column of the balance sheet.

Purchases

It is preferable for managerial purposes to maintain a separate account for purchases (under the periodic system—see Chap. 8) rather than including them in the Inventory account. This account includes only merchandise purchased for retail and appears in the income statement; purchases of machinery, trucks, etc., to be used in the business are debited to the particular asset account.

The journal entry to record a merchandise purchase is as follows:

Purchases 7,000
Accounts Payable (or Cash) 7,000

At the end of the period, the total in the Purchases account is closed to the Income Summary account.

7.3 OTHER MERCHANDISING ACCOUNTS

(A) Transportation-In

The cost of transportation-in, such as freight or trucking, is part of the cost of merchandise. Where the purchaser pays the transportation-in, a separate account should be maintained. The entry to record the payment of transportation-in is as follows:

Transportation-In 1,000
Accounts Payable (or Cash) 1,000

(B) Purchase Returns

Sometimes goods purchased may be found to be unsatisfactory. The entire shipment may be returned to the vendor, or the vendor may allow a reduction in price without the return of the goods. A return of \$600 of goods to the vendor is shown as follows:

Accounts Payable 600
Purchase Returns 600

7.4 COST OF GOODS SOLD

Since we do not reflect purchases or sales of goods in the Inventory account during the year (periodic method), we must determine the cost of the inventory remaining on hand at the end of the accounting period and make any adjustments necessary. Ending inventory, or merchandise that has not been sold and is on hand at the end of the period, is an asset that appears on the balance sheet. Cost of Goods Sold appears in the income statement as a deduction from Sales. This cost may be calculated by the following procedure:

- (a) Inventory (beginning). The amount to be used will be the same as the ending inventory of 19X7 (determined by counting and applying one of the methods discussed in Chaps. 8 and 9).
- (b) **Purchases.** This is the total amount of goods bought for resale during 19X8, minus any purchases returned to the seller and any discounts given (net purchases), plus transportation.
- (c) Goods Available for Sale. This is computed by adding the inventory at the beginning of the year to the net purchases during 19X8.
- (d) Inventory (ending). This is determined by taking a physical count of all goods remaining in the business on December 31, 19X8, and applying one of the methods discussed in Chaps. 8 and 9.
- (e) Cost of Goods Sold. This is the difference between what was available for sale and what is left at the end of the year. The cost of goods sold will then be deducted from net sales to determine the gross profit.

EXAMPLE 2

In the income statement, the Cost of Goods Sold section might appear as

| Sales | | | \$45,000 |
|--------------------------|---|---|---|
| Cost of Goods Sold | | | |
| Inventory, January 1 | | \$10,000 | |
| Purchases | \$25,000 | | |
| Less: Purchase Returns | 600 | | |
| Net Purchases | \$24,400 | | |
| Transportation-In | 1,000 | 25,400 | |
| Goods Available for Sale | | \$35,400 | |
| Inventory, December 31 | | 12,000 | |
| Total Cost of Goods Sold | | | 23,400 |
| Gross Profit on Sales | | | \$21,600 |
| | Cost of Goods Sold Inventory, January 1 Purchases Less: Purchase Returns Net Purchases Transportation-In Goods Available for Sale Inventory, December 31 Total Cost of Goods Sold | Cost of Goods Sold Inventory, January 1 Purchases \$25,000 Less: Purchase Returns 600 Net Purchases \$24,400 Transportation-In 1,000 Goods Available for Sale Inventory, December 31 Total Cost of Goods Sold | Cost of Goods Sold \$10,000 Inventory, January 1 \$10,000 Purchases \$25,000 Less: Purchase Returns 600 Net Purchases \$24,400 Transportation-In 1,000 25,400 Goods Available for Sale \$35,400 Inventory, December 31 12,000 Total Cost of Goods Sold 12,000 |

7.5 THE CLASSIFIED INCOME STATEMENT

The classified income statement sets out the amount of each function and enables management, stockholders, analysts, and others to study the changes in function costs over successive accounting periods. There are four functional classifications of the income statement.

- 1. **Revenue.** This includes gross income from the sale of products or services. It may be designated as Sales, Income from Fees, etc., to indicate gross income. The gross amount is reduced by Sales Returns and by Sales Discounts (see Chap. 10) to arrive at Net Sales.
- 2. Cost of goods sold. This includes the costs related to the products or services sold. It would be relatively simple to compute for a firm that retails furniture; it would be more complex for a manufacturing firm that changes raw materials into finished products.
- 3. Operating expenses. This includes all expenses or resources consumed in obtaining revenue. Operating expenses are further divided into two groups. Selling expenses are those related to the promotion and sale of the company's product or service. Generally, one individual is held accountable for this function, and his or her performance is measured by the results in increasing sales and maintaining selling expenses at an established level. General and Administrative expenses are those related to the overall activities of the business, such as the salaries of the president and other officers.
- 4. Other expenses (net). This includes nonoperating and incidental expenses, such as interest expense. Often any incidental income, such as interest income, is offset against the expense and a net amount shown.

EXAMPLE 3

J. Ales Classified Income Statement

(a) Gross Sales

| Sales of Goods or Services | | \$25,000 | |
|----------------------------|---------|----------|----------|
| Less: Sales Returns | \$1,250 | | |
| Sales Discounts | 750 | 2,000 | |
| Net Sales | | | \$23,000 |

(b) Cost of Goods Sold

| Inventory, January 1 | \$ 2,500 |
|--------------------------|---------------------|
| Purchases | 16,500 |
| Goods Available for Sale | \$19,000 |
| Inventory, December 31 | 3,000 |
| Cost of Goods Sold | 16,000 |

(c) Gross Profit

Gross Profit \$ 7,000

(d) Operating Expenses

Net Income

| | Selling Expenses | | | |
|--------------|----------------------------|---------|----------|----------|
| | Sales Salaries Expense | \$1,200 | | |
| | Travel Expense | 200 | | |
| | Advertising Expense | 600 | \$ 2,000 | |
| | General Expenses | | | |
| | Officers' Salaries Expense | \$1,000 | | |
| | Insurance Expense | 600 | 1,600 | |
| | Total Operating Expenses | | | 3,600 |
| (e) | Operating Income | | | |
| | Net Income from Operations | | | \$ 3,400 |
| (<i>f</i>) | Other Expenses (net) | | | |
| | Interest Expense | | \$ 500 | |
| | Less: Interest Income | | 100 | |
| | Other Expenses (net) | | | 400 |
| (g) | Net Income | | | |
| | | | | # 4 000 |

In this form of income statement, a number of subcategories of cost and expense are used. The key items are labeled with letters, and we will describe them briefly.

\$ 3,000

- (a) This is the total of all charges to customers for merchandise sold, both for cash and on account.
- (b) This is one of the most important sections of the income statement. It shows the cost of the goods delivered to customers during the period and the relationship of this cost to sales. This relationship can be conveniently compared with the figures for other periods.
- (c) The amount of gross profit (gross margin) must be sufficient to pay all expenses (other than those in Cost of Goods Sold) and to yield a reasonable return or profit. The gross profit ratio is a key control figure in managing a business. The selling price must be kept in such a relationship to cost as to yield a desired gross profit. To improve the gross profit ratio, sales prices may be increased or costs decreased. Favorable or unfavorable trends can be easily seen by comparing the gross profit ratio with the ratios for other periods.
- (d) These are the expenses necessary for carrying on the operations of the business. They do not include unusual expenses or financial expenses not of an operating nature, which are classed separately.
- (e) This is the amount by which the gross profit exceeds total operating expenses. It measures the degree of profitability from operations, before nonoperating items are considered.
- (f) This nonoperating item is offset and the net amount is shown in the summary column of the income statement
- (g) This represents the net income for the period. Had there been more expenses than income, the figure would have been called *net loss*.

7.6 THE MERCHANDISING WORK SHEET

For simplicity, the Thomas Company's work sheet (Fig. 7-1) and trial balance will be used with the addition of the Merchandise Inventory and Purchases accounts. This will have the effect of making the Thomas Company service industry (Chap. 6) a merchandising company.

Thomas Company Trial Balance December 31, 19X8

| Cash | \$ 3,510 | |
|--------------------------|----------|----------|
| Accounts Receivable | 4,010 | |
| *Merchandise Inventory | 20,000 | |
| Supplies | 1,050 | |
| Prepaid Rent | 400 | |
| Equipment | 18,000 | |
| Accumulated Depreciation | | \$ 3,000 |
| Notes Payable | | 4,000 |
| Accounts Payable | | 2,380 |
| Taxes Payable | | 400 |
| *Jane Thomas, Capital | | 38,690 |
| Jane Thomas, Drawing | 2,000 | |
| *Sales | | 30,500 |
| *Purchases | 25,000 | |
| Salaries Expense | 4,600 | |
| Misc. Expense | 400 | |
| | \$78,970 | \$78,970 |

^{*}New accounts or amounts.

Additional data:

- (a) Merchandise Inventory, end of year, \$26,000
- (b) Supplies on hand, \$550
- (c) Rent expired, \$100
- (d) Depreciation for year, \$1,800
- (e) Accrued salaries, \$200
- (f) Accrued interest on notes payable, \$40

Note that with the exception of Merchandise Inventory and related accounts, all adjustments are identical to the work sheet (see Fig. 6-1) in Chap. 6.

| | | | | | | | 56,500 | 56,500 | 54,370 | 54,370 |

Fig. 7-1

Based on the work sheet (see Fig. 7-1), the Cost of Goods Sold section of the income statement would appear as

| Cost of Goods Sold | |
|-----------------------------------|----------|
| Merchandise Inventory (beginning) | \$20,000 |
| Purchases | 25,000 |
| Goods Available for Sales | \$45,000 |
| Less: Merchandise Inventory | |
| (ending) | 26,000 |
| Total Cost of Goods Sold | |

Total Cost of Goods Sold \$19,000

The income statement for the merchandising business of Thomas Company would then be

| Sales | | \$30,500 |
|-----------------------|---------|----------|
| Cost of Goods Sold | | 19,000 |
| Gross Profit | | \$11,500 |
| Operating Expenses | | |
| Salaries Expense | \$4,800 | |
| Miscellaneous Expense | 400 | |
| Supplies Expense | 500 | |
| Rent Expense | 100 | |
| Depreciation Expense | 1,800 | |
| Interest Expense | 40 | |
| Total Expenses | | _7,640 |
| Net Income | | \$ 3.860 |

Summary

| 1. | A business whose income is derived largely from buying or selling goods, rather than rendering services, is known as a(n) firm. |
|----|--|
| 2. | The goods on hand at the beginning or the end of the accounting period are called |
| 3. | The merchandise inventory on hand at the end of the period will appear both in the section of the income statement and in the of the balance sheet. |
| 4. | The Purchases account is used only for goods for Purchases of trucks and equipment are debited to accounts. |
| 5. | Beginning inventory plus net purchases will equal |
| 6. | In recording both beginning inventory and ending inventory as an adjusting entry, the account is used. |
| 7. | The difference between what was available for sale and what is left at the end of the year is known as the |
| | wers: 1. merchandising; 2. inventory; 3. Cost of Goods Sold, Asset; 4. resale, asset; 5. Goods Available for e; 6. Income Summary; 7. Cost of Goods Sold |

Solved Problems

7.1. The Folk Company purchased merchandise costing \$150,000. What is the cost of goods sold under each assumption below?

| | Beginning Inventory | Ending Inventory |
|--------------|------------------------|---------------------|
| (a) | 100,000 | 60,000 |
| (b) | 75,000 | 50,000 |
| (c) | 50,000 | 30,000 |
| (<i>d</i>) | 0 | 10,000 |

| | Beginning Inventory | + Purchases - | Ending Inventory = | Cost of Goods Sold |
|--------------|---------------------|---------------|--------------------|--------------------|
| (a) | 100,000 | 150,000 | 60,000 | 190,000 |
| (<i>b</i>) | 75,000 | 150,000 | 50,000 | 175,000 |
| (c) | 50,000 | 150,000 | 30,000 | 170,000 |
| (<i>d</i>) | 0 | 150,000 | 10,000 | 140,000 |

7.2. Compute the cost of goods sold from the following information: Beginning Inventory, \$20,000; Purchases, \$70,000; Ending Inventory, \$34,000.

| | |

SOLUTION

| | |
|--------------------------|-------------|
| Cost of Goods Sold | \$56,000 |
| Less: Ending Inventory | 34,000 |
| Goods Available for Sale | \$90,000 |
| Purchases | 70,000 |
| Beginning Inventory | \$20,000 |

7.3. For each situation below, determine the missing figures.

| | Beginning | Purchases | Ending | Cost of |
|-----|-----------|---------------|-----------|------------|
| | Inventory | During Period | Inventory | Goods Sold |
| (a) | 18,000 | 40,000 | | 35,000 |
| (b) | | 41,000 | 15,000 | 42,000 |
| (c) | 21,000 | 37,000 | 20,000 | |
| (d) | 27,000 | | 25,000 | 38,000 |

SOLUTION

(a) 23,000; (b) 16,000; (c) 38,000; (d) 36,000

7.4. Following are various accounts from the Cost of Goods Sold section of the income statement. Each has an account figure missing. Find the missing figure. *Hint*: Make up a blank income statement and fill in the information already supplied.

| | Sales | Beginning Inventory | Purchases | Ending Inventory | Cost of Goods Sold | Gross Income |
|-----|---------|------------------------|-----------|---------------------|-----------------------|-----------------|
| (a) | | 28,000 | 74,000 | 36,000 | 66,000 | 117,500 |
| (b) | 212,000 | 54,000 | | 62,500 | 88,500 | 123,500 |
| (c) | 157,000 | 37,500 | 67,000 | 47,500 | 57,000 | |
| (d) | 247,000 | | 97,000 | 61,000 | 100,000 | 147,000 |
| (e) | 224,000 | 74,000 | 104,000 | 72,000 | | 118,000 |

(a) 183,500; (b) 97,000; (c) 100,000; (d) 64,000; (e) 106,000

7.5. Journalize the following data as of December 31:

- (a) Merchandise inventory, January 1, \$31,800; December 31, \$38,500.
- (b) Prepaid insurance before adjustment, \$1,540. It was found that \$460 had expired during the year.
- (c) Office supplies physically counted on December 31 were worth \$120. The original balance of Supplies was \$750.
- (d) Office salaries for a 5-day week ending on Friday average \$2,500. The last payday was Friday, December 27.

^{*}December 30 and 31.

7.6. Journalize the adjusting entries, based on the following data:

- (a) Merchandise inventory: January 1, \$31,700; December 31, \$37,500.
- (b) Office supplies inventory on January 1, \$1,200; office supplies on hand, December 31, \$780.
- (c) Sales salaries average \$3,000 for a 5-day workweek ending on Friday. The last payday of the year was Friday, December 26.
- (d) Prepaid insurance before adjustments has a balance of \$1,230. Analysis of the account shows that \$750 has expired during the year.

Costing Merchandise Inventory

8.1 INTRODUCTION

In a mercantile business, inventory is merchandise that is held for resale. As such, it will ordinarily be converted into cash in less than a year and is thus a current asset. In a manufacturing business, there will usually be inventories of raw materials and goods in process in addition to an inventory of finished goods. Since we have discussed the Merchandise Inventory account as it relates to the work sheet (Chap. 7), let us now examine how the merchandise inventory amount is calculated.

8.2 PERIODIC AND PERPETUAL METHODS OF INVENTORY

Under the *periodic method*, inventory is physically counted at regular intervals (annually, quarterly, or monthly). When this system is used, credits are made to the Inventory account or to Purchases not as each sale is made, but rather in total at the end of the inventory period.

The perpetual method is generally used when units are of relatively high value. Running balances by unit and by cost are maintained for units purchased and sold. Individual receipts of goods are debited to the Inventory account, and individual sales are credited to this account. At the end of the accounting period, the cost of goods sold can be determined by adding the costs of the individual items sold.

EXAMPLE 1

If goods were purchased for \$10,000 under the periodic system, the account *Purchases* would be debited. However, under the perpetual system, everything would be debited to *Merchandise Inventory*.

Conversely, every time a sale is made, the account is credited.

EXAMPLE 2

If goods costing \$6,000 were sold for \$10,000, under the periodic system Sales Income would be credited for the sale of \$10,000.

Accounts Receivable

10,000

Sales Income

10,000

However, under the perpetual system of valuation, even though the sale is recognized and treated in the same manner, a second entry is required to show the reduction in the value of Merchandise Inventory.

| Accounts Receivable | 10,000 | |
|-----------------------|--------|--------|
| Sales Income | | 10,000 |
| Cost of Goods Sold | 6,000 | |
| Merchandise Inventory | | 6,000 |

Thus, the inventory account shows a running balance that always reflects the amount on hand.

Since all inventory transactions under the perpetual inventory system are charged to Merchandise Inventory, any purchase returns or freight charges would not be recognized as separate accounts, but would also fall under the Merchandise Inventory account.

EXAMPLE 3

Present the entries in the following four situations for both the periodic and perpetual systems.

| C. t | D : II | D 1 | 1 (00 | |
|--------------|----------------|--|--------|-------|
| Solution. | Periodic: | Purchases | 1.600 | |
| | | Accounts Payable | | 1,600 |
| | Perpetual: | Merchandise Inventory | 1,600 | |
| | | Accounts Payable | | 1,600 |
| Situation B. | Sold merchan | dise costing \$1,000 on account for \$ | 3,000. | |
| Solution. | Periodic: | Accounts Receivable | 3.000 | |
| | | Sales Income | | 3,000 |
| | Perpetual: | Accounts Receivable | 3,000 | |
| | respenden. | Sales Income | 3,000 | 3,000 |
| | | Sales Income | | 5,000 |
| | | Cost of Goods Sold | 1,000 | |
| | | Merchandise Inventory | | 1,000 |
| Situation C. | Paid freight c | harge of \$25 on merchandise purcha | ised. | |
| Solution. | Periodic: | Freight-In | 25 | |
| | | Cash | | 25 |
| | Perpetual: | Merchandise Inventory | 25 | |
| | respensas. | Cash | 20 | 25 |
| | | | | |
| Situation D. | Returned \$50 | 0 of merchandise previously bought | | |
| Solution. | Periodic: | Accounts Payable | 500 | |
| | | Purchase Returns | | 500 |
| | Perpetual: | Accounts Payable | 500 | |
| | • | Merchandise Inventory | | 500 |
| | | , | | |

Situation A. Purchased \$1,600 of merchandise on account.

Note that under the perpetual system, Purchases, Freight-In, and Purchase Returns are nonexistent as accounts. Under this system, everything involving merchandise is charged immediately to Merchandise Inventory.

Because of the increasing use of bar codes, the perpetual inventory method should eliminate the need to physically count each item in the inventory at the end of the period as in the periodic method. However, some firms still take a physical inventory at the end of the year in case of theft, spoilage, or clerical error. Therefore, because of this double checking, the periodic inventory system is generally used and will be assumed in future discussions on inventory.

8.3 DETERMINING INVENTORY

Firms that use the periodic system do not keep records that show a continuous count for each product; or rather, the amounts are determined through a physical inventory. A physical inventory is the process of actually counting each item on hand. This laborious task is usually done when the business is closed, either after business hours or by actually closing the store for a short period of time. A typical "hands on" count would involve two people, one counting and the other recording the data on an inventory sheet.

(A) Goods in Transit

Any goods in transit that have been ordered by the firm should be included in the inventory if the title to the goods has already passed, even if they are not physically on the premises for the inventory count. The term FOB (Free On Board) is used to show the passing of title from the seller to the buyer. FOB shipping point means that title passed when the goods left the seller. FOB destination means that title will pass when the goods are received by the purchaser. Therefore, for inventory determination, goods in transit that are FOB shipping point should become part of the inventory, whereas those that are FOB destination should not.

EXAMPLE 4

At the end of the year, \$66,000 appears as inventory of Drew Corp. On order is another \$14,000 (\$10,000 FOB shipping point and \$4,000 FOB destination). The inventory to be recorded is determined as:

| \$66,000 | Inventory on hand |
|----------|--------------------------------|
| 10,000 | Ordered FOB shipping point |
| \$76,000 | Total inventory to be recorded |

The \$4,000 of goods ordered FOB destination will not become part of the inventory until the goods are received, as title does not pass to Drew Corp. until receipt of the inventory.

(B) Sales

Merchandise that has already been sold (sales revenue) but has not as yet been shipped should not be considered part of the inventory figure. The same rules for goods in transit apply for sales as for purchases.

EXAMPLE 5

A physical count of merchandise shows that \$46,000 is on hand. However, \$16,000 of the inventory has already been sold by Acme but has not as yet been shipped. Since inventory is an asset, Acme does not own and cannot record \$46.000 of merchandise inventory, but only \$30,000, the amount that is actually owned.

(C) Consignment

Only inventory that is owned by the firm should be recorded. For example, merchandise on consignment (sold on a commission basis) would not be counted, as it is not owned by the business (consignee), but rather by the firm that shipped it (consignor).

EXAMPLE 6

If Ferdic Co. has an inventory count showing a cost of \$24,000 that consists of \$18,000 of goods purchased and the balance (\$6,000) of goods received on consignment, only the \$18,000 would be considered as inventory. Since inventory is an asset, the balance sheet of Ferdic Co. would reflect only the asset \$18,000 and not the \$6,000 loaned for resale.

8.4 INVENTORY MEASUREMENT

To approach the problem of inventory measurement, in order to assign the business cost to each item, three methods of valuation (FIFO, LIFO, and weighted average) have been developed and approved by GAAP (General Accepted Accounting Principles). To compare these three methods, the same identical data (Chart I) will be used in the following inventory examples.

Chart I

| Date | Туре | Units | Unit Cost | Totals |
|-----------|-----------|-------|-----------|---------|
| Jan. 1 | Inventory | 100 | \$ 6 | \$ 600 |
| Mar. 10 | Purchase | 150 | \$ 8 | 1,200 |
| June 6 | Purchase | 200 | \$ 9 | 1,800 |
| Oct. 4 | Purchase | 250 | \$10 | 2,500 |
| Available | for sale | 700 | ' | \$6,100 |

It is to be assumed that a physical count of inventory as of the last day of the accounting period (December 31) showed 320 units on hand. Therefore, 380 units (700 - 320) were sold during the year.

(A) Costing Inventory: First-In-First-Out (FIFO)

This method of costing inventory makes the assumption that goods are sold in the order in which they are purchased. Therefore, the goods that were bought first (first-in) are the first goods to be sold (first-out), and the goods that remain on hand (ending inventory) are assumed to be made up of the latest costs. Therefore, for income determination, earlier costs are matched with revenue and the most recent costs are used for balance sheet valuation.

This method is consistent with the actual flow of costs, since merchandisers attempt to sell their old stock first. (Perishable items and high fashion items are examples.) FIFO is the most widely used inventory method of those that will be discussed.

EXAMPLE 7

Under FIFO, those goods left at the end of the period are considered to be those received last. Therefore, the 320 units on hand on Dec. 31 would be costed as follows:

| Most recent purchase (Oct. 4) | 250 units @ \$10 | = \$2,500 |
|------------------------------------|------------------|-----------|
| Next most recent purchase (June 6) | _70 units @ \$ 9 | =630 |
| Ending inventory | 320 units | \$3,130 |

The latest cost of the inventory consists of 250 units at \$10. However, since the ending inventory consists of 320 units, we must refer to the next most recent purchase and include 70 units at \$9. Therefore, you could say that the process for determining the cost of the units on hand involves working backward through the purchases until there is a sufficient quantity to cover the ending inventory count. Thus the ending inventory under the FIFO method would be valued and recorded at \$3.130.

The cost of goods sold can be determined by subtracting the value of the ending inventory from the total value of the inventory available for sale (\$6,100 - \$3,130 = \$2,970). Since 320 units remain as ending inventory, the number of units sold is 380 (700 - 320).

EXAMPLE 8

This can also be computed as

| 100 | units of inventory | @ \$6 | = | \$ | 600 |
|-----|---------------------------|--------|---|-----|------|
| 150 | units purchased (Mar. 10) | @ \$8 | = | 1 | ,200 |
| 130 | units purchased (June 6) | @ \$9 | = | _ 1 | ,170 |
| 380 | Total cost of good | s sold | | \$2 | ,970 |
| | | | | | |

It should be noted that as a method of assigning costs, FIFO may be used regardless of the actual physical flow of merchandise. Indeed, we might say that FIFO really stands for first-price-in-first-price-out. In a period of rising prices—inflation, for example—the FIFO method will yield the largest inventory value, thus resulting in a greater net income. This situation occurs because this method assigns an inventory cost based on the most recent higher costs. Conversely, the FIFO method would produce a smaller cost of goods sold because the earlier lower costs are assigned to the cost of goods sold. Because FIFO assigns the most recent charges to inventory, the value of the ending inventory is closer to its replacement cost than any other method.

EXAMPLE 9

Two years of determining the value of the same number of units in the inventory are shown below.

(a) First year

19X8 (Rising Costs)

| Inventory | 10 units @ | \$ 5 = | \$ 50 |
|-----------------|------------|---------------|-------|
| First purchase | 10 units @ | 6 = | 60 |
| Second purchase | 10 units @ | 7 = | 70 |
| Third purchase | 10 units @ | 8 = | 80 |
| | 40 units | | \$260 |

If 10 units are on hand, the value under FIFO would be computed as

Third purchase 10 units @
$$\$8 = \$80$$

Thus, the ending inventory of 10 units is \$80. The cost of goods sold would be calculated as 260 - 80 = 180.

(b) Second year

19X9 (Declining Costs)

| Inventory | 10 units @ | \$8 = | \$ 80 |
|-----------------|------------|-------|-------|
| First purchase | 10 units @ | 7 = | 70 |
| Second purchase | 10 units @ | 6 = | 60 |
| Third purchase | 10 units @ | 5 = | _ 50 |
| | 40 units | | \$260 |

If 10 units are on hand, its value under FIFO would be computed as

Third purchase 10 units @ \$5 = \$50

Thus, the ending inventory of 10 units is \$50.

The cost of goods sold would be calculated as \$260 - \$50 = \$210.

Note that even though there are 10 units left in both years, under FIFO, the year 19X8 produces a higher ending inventory in a period of rising costs, thus producing a higher net income. This is because the cost of goods sold is lower when costs are rising (\$260 - \$80 = \$180) than when they are declining (\$260 - \$50 = \$210), and the lower the cost, the higher the profit.

(B) Costing Inventory: Last-In-First-Out (LIFO)

The last-in-first-out (LIFO) method of inventory measurement assumes that the most recently purchased items are to be the first ones sold and that the remaining inventory will consist of the earliest items purchased. In other words, the order in which the goods are sold is the reverse of the order in which they are bought. Unlike FIFO, the LIFO method specifies that the cost of inventory on hand (ending inventory) is determined by working forward from the beginning inventory through purchases until sufficient units are obtained to cover the ending inventory. This is the opposite of the FIFO system.

Remember that FIFO assumes that costs flow in the order in which they are incurred, whereas LIFO assumes that costs flow in the reverse of the order in which they are incurred.

EXAMPLE 10

Under LIFO, the inventory at the end of the period is considered to be merchandise purchased in the first part of the period. What is the cost of the 320 units on hand (see Chart I)?

| Earliest purchase (Jan. 1) | 100 units @ $$6 = 600 |
|----------------------------|-------------------------|
| Next purchase (Mar. 10) | 150 units @ \$8 = 1,200 |
| Next purchase (June 6) | 70 units @ \$9 = 630 |
| Ending inventory | 320 units \$2,430 |

Thus, ending inventory under the LIFO method would be valued at \$2,430.

EXAMPLE 11

Determine the cost of goods sold for Example 10.

The cost of goods sold is determined by subtracting the value of the ending inventory from the total value of the inventory available for sale (\$6,100 - \$2,430 = \$3,670). This cost may also be computed as

| Oct. 4 | 250 units @ \$10 | = \$2,500 |
|--------------------|------------------|-----------|
| June 6 | 130 units @ \$ 9 | = 1,170 |
| Cost of goods sold | 380 units | \$3,670 |

A disadvantage of the LIFO method is that it does not reflect the actual physical movement of goods in the business, as most businesses do not move out their most recent purchases. Yet firms favor this method because it matches the most recent costs against the current revenue, thereby keeping earnings from being greatly distorted by any fluctuating increases or decreases in prices. Yet it sometimes allows managers to do too much maneuvering to change net income. For example, if prices are rising rapidly, and a company wishes to pay less in taxes (lower net income) for that year, management can buy large amounts of inventory near the end of that period. Under LIFO, these higher inventory costs, because of rising prices, immediately become an expense (cost of goods sold), and thus result in the financial statement's showing a lower net income. Conversely, if the firm is having

a bad year, management may want to increase net income to garner favor from its stockholders. This can be done by delaying any large purchase of high-cost inventory until the following period, thus keeping the purchase out of the Cost of Goods Sold section for the current year and avoiding any decrease in net income.

When prices are rising, certain tax advantages are gained through LIFO because it yields a lower profit because of the higher cost of goods sold.

EXAMPLE 12

Use Chart I.

| | FIFO | | LIFO |
|------------------------|---------|----------|----------|
| Sales (assumed) | | \$20,000 | \$20,000 |
| Cost of Goods Sold: | | | |
| Goods Avail. for Sale | \$6,100 | \$6,10 | 0 |
| Less: Ending Inventory | _3,130 | 2,43 | 0 |
| Cost of Goods Sold | | 2,970 | 3,670 |
| Gross Profit | | \$17,030 | \$16,330 |

Therefore, as Example 12 depicts, LIFO produces (in a period of rising prices) (1) a lower ending inventory, (2) a higher cost of goods sold, and (3) a lower gross profit. FIFO will produce the opposite.

The IRS will permit companies to use LIFO for tax purposes only if they use LIFO for financial reporting purposes. Thus, if a business uses LIFO for tax purposes, it must also report inventory and income on the same valuation basis for its financial statements; however, it is allowed to report an alternative inventory amount in the notes to the financial statements. This is permitted because it affords true financial analysis by allowing comparison of one business with another on a similar basis. It should be noted that a business cannot change its inventory valuation method any time it chooses. Once a method has been adopted, the business should use the same procedure from one period to the next. If management feels a need to change, permission must be granted by the IRS. The business must then follow specific authoritative guides that will detail how the changes should be treated on financial statements.

(C) Costing Inventory: Average Cost Valuation

Known also as weighted average, this inventory measurement system is based on the average cost of inventory during the period and takes into consideration the quantity and the price of the inventory items by assigning the same amount of cost to identical items. In other words, it spreads the total dollar cost of the goods available for sale equally among all the units. The ending inventory is determined by the following procedure:

- 1. The cost of the total number of units available for sale (beginning inventory plus purchases) is divided by the total number of units available for sale.
- 2. The number of units in the ending inventory is multiplied by this weighted average figure.

EXAMPLE 13

Referring to the same data in Chart I, the cost of the 320 units on hand would be calculated as follows:

- 1. $\$6,100 \div 700 \text{ units} = \8.71 unit cost
- 2. $\$8.71 \times 320$ units on hand = \$2,787* ending inventory

^{*}Rounded off to highest dollar.

EXAMPLE 14

The cost of goods sold is then calculated by subtracting the value of the ending inventory from the total value of the inventory available for sale (\$6,100 - \$2,787 = \$3,313).

Because there were 700 units available for sale and 320 units on hand at the end of the period, the number of units sold was determined as 700 - 320 = 380 units. Therefore, another method of computation to determine the cost of goods sold would be \$8.71 \times 380 units (cost of goods sold) = \$3,310.*

The average cost method is best used by firms that buy large amounts of goods that are similar in nature and stored in a common place. Grain-processing, gasoline, and coal are good examples of products that could logically be costed under weighted average.

There are some limitations that should be noted in this valuation procedure. Unit cost cannot be related to any physical purchase and does not represent any price changes. In those industries that are greatly affected by price and style change, this method will not yield specific cost determination.

The average cost method averages price fluctuation (up or down), in determining both gross profit and inventory cost, and the results will always be the same regardless of whether price trends are rising or falling.

EXAMPLE 15

| | Rising Price M | larket | |
|---------|---------------------|----------------------|-------|
| Jan. 1 | Beginning inventory | 100 units @ \$6 = \$ | 600 |
| Mar. 20 | 1st purchase | 100 units @ 7 = | 700 |
| Jul. 20 | 2nd purchase | 100 units @ 8 = | 800 |
| Nov. 20 | 3rd purchase | 100 units @ 9 = | 900 |
| | Available for sale | 400 units | 3,000 |
| | Falling Price N | 1arket | |
| Jan. 1 | Beginning inventory | 100 units @ \$9 = \$ | 900 |
| Mar. 20 | 1st purchase | 100 units @ 8 = | 800 |
| Jul. 20 | 2nd purchase | 100 units @ $7 =$ | 700 |
| Nov. 20 | 3rd purchase | 100 units @ 6 = | 600 |
| | Available for sale | 400 units | 3,000 |

Ending inventory consists of 150 units. Under the average cost method, the cost per unit is the same whether there is a rising or falling price market.

$$$3,000 \div 400 = $7.50 \text{ per unit}$$

150 units on hand $\times $7.50 = $1,125$

Thus, the ending inventory value of \$1,125 will not change, regardless of the economic pricing trend. The cost of goods sold is then determined by

$$(400 - 150) = 250 \text{ units} \times \$7.50 = \underbrace{\$1,875}_{}$$

Note that the cost of goods sold, whether in a rising or falling price market, will be valued at the same cost.

(D) Comparison of Inventory Methods

The three methods of inventory valuation discussed are based on an assumption as to the flow of costs. The FIFO method is based on the assumption that costs flow in the order in which they were incurred; the LIFO method assumes that costs flow in the reverse of the order in which they were

^{*}Rounded off to highest dollar.

incurred; and weighted average assumes that costs should be assigned to the merchandise inventory based on an average cost per unit. Note that if the costs of all purchases remain the same, the three methods of inventory valuation will yield identical results. However, as prices never stay constant, in practice each of these three methods will result in a different cost for the ending inventory. Remember that the ending figure is subtracted from the cost of goods available for sale to arrive at the cost of goods sold (COGS). Therefore, the net income or loss will vary according to the inventory method chosen. Also, the ending inventory on the balance sheet will vary with each method.

In Example 16 below, we compare the results of the FIFO, LIFO, and weighted average methods, with regard to both ending inventory and cost of goods sold. Since the two amounts are related through the equation

Goods available for sale – ending inventory = cost of goods sold

it is seen that if the ending inventory is overstated, the cost of goods sold will be understated and net profit overstated. On the other hand, if inventory is understated, then cost of goods sold will be overstated and net profit understated. Clearly, the method chosen for inventory computation can have a marked effect on the profit of the firm. There is no one method that is the best for all firms, but careful consideration of the following factors will be helpful in making the decision: (1) the effect on the income statement and balance sheet, (2) the effect on taxable income, and (3) the effect on the selling price.

EXAMPLE 16

| | First-In- | Last-In- | Weighted |
|---------------------------|-----------|--------------|--------------|
| | First-Out | First-Out | Average |
| Goods available for sale | \$6,100 | \$6,100 | \$6,100 |
| Ending inventory, Dec. 31 | 3,130 | <u>2,430</u> | <u>2,787</u> |
| Cost of goods sold | \$2,970 | \$3,670 | \$3,313 |

Summary From Chart I

Based upon Example 16, the following evaluation is considered:

FIFO

- 1. Yields the lowest amount of cost of goods sold
- 2. Yields the highest amount of gross profit
- 3. Yields the highest amount of ending inventory

Note: During a period of inflation or rising prices, the use of FIFO will have the results shown above, but in a declining price economy, the results will be reversed. The major criticism of this method is the tendency to maximize the effect of inflationary and deflationary trends on amounts reported as gross profit.

LIFO

- 1. Yields the highest amount of cost of goods sold
- 2. Yields the lowest amount of gross profit
- 3. Yields the lowest amount of ending inventory

Because the cost of the most recently acquired units approximates the cost of their replacement, this method can be defended on the basis that its use more nearly matches current costs with current revenues. The major justification for LIFO is that it minimizes the effect of price trends on gross profit.

Weighted Average

- 1. Yields results between FIFO and LIFO for cost of goods sold
- 2. Yields results between FIFO and LIFO for gross profit
- 3. Yields results between FIFO and LIFO for ending inventory

This compromise method of inventory costing reduces the effect of price trends (up or down) as all costs are averaged in the determination of both gross profit and inventory cost. For any given series of prices, the average cost will be the same, regardless of the direction of price trends.

Summary

| 1. | When inventory is recorded based on a physical count at the end of an accounting period, we have the method. |
|----|---|
| 2. | The inventory method used when units are generally of high value is the method. |
| 3. | The inventory method is most commonly used in retail establishments. |
| 4. | A method of inventory valuation based on the concept that the goods are sold in the order in which they are received is known as |
| 5. | The valuation of inventory based on the concept that the most recent costs incurred should be charged against income is known as |
| 6. | In a rising market, net income under would be smaller, thus producing a smaller tax. |
| 7. | The inventory method based on the concept that the unit cost of merchandise sold is the average of all expenditures for inventory is known as |
| | vers: 1. periodic; 2. perpetual; 3. periodic; 4. first-in-first-out (FIFO); 5. last-in-first-out (LIFO); 6. LIFO; 7 hted average. |

Solved Problems

8.1. (a) Based upon the following records, determine the value of the inventory to be recorded.

| Goods on hand (paid) | \$ 59,000 |
|--|-----------|
| Goods on hand (owed) | 42,000 |
| Goods on hand (consignment) | 15,000 |
| Goods ordered but not received (FOB sh. pt.) | 24,000 |
| Goods ordered but not received (FOB dest.) | 12,000 |
| | \$152,000 |

(b) How is this value treated?

SOLUTION

(a) The inventory is valued as follows:

| Goods on hand (paid) | \$ 59,000 |
|------------------------------------|-----------|
| Goods on hand (owed) | 42,000 |
| Goods ordered (FOB shipping point) | _24,000 |
| Total inventory on hand | \$125,000 |
| | |

(b) Balance Sheet

Current Assets

Merchandise Inventory \$125,000

8.2. In Prob. 8.1, if \$25,000 of inventory had been sold but, at the time of the accounting valuation, had not been shipped, what would the value of the inventory then be?

SOLUTION

$$125,000 - 25,000 = 100,000$$

Under the periodic system, no adjustment to the Inventory account is made until the end of the period, when a new count is made.

8.3. The inventory information for a product is given below:

| Jan. 1 | Inventory | 12 units | \$15 |
|---------|-----------|----------|------|
| Feb. 16 | Purchase | 8 units | 16 |
| Mar. 4 | Purchase | 15 units | 18 |
| Oct. 15 | Purchase | 10 units | 20 |

After taking a physical count, we find that we have 14 units on hand. Determine the ending inventory cost by the FIFO method.

SOLUTION

| Most recent purchase | (Oct. 15) | 10 | units @ | \$20 | = | \$200 |
|---------------------------|-----------|----|---------|------|---|-------|
| Next most recent purchase | (Mar. 4) | _4 | units @ | 18 | = | 72 |
| Ending inventory | | 14 | | | | \$272 |

Remember that values are assigned to the inventory based on the latest cost (the most recent purchases).

8.4. Assign a value to the ending inventory under FIFO using the following cost data:

| Beginning inventory | 200 units @ \$10 = \$2,000 |
|---------------------|----------------------------|
| First purchase | 300 units @ $12 = 3,600$ |
| Second purchase | 300 units @ $11 = 3,300$ |
| Available for sale | <u>\$8,900</u> |

An inventory count at the end of the period reveals that 450 units are still on hand.

| Second purchase | 300 units @ \$11 | = \$3,300 |
|---------------------|------------------|-----------|
| First purchase | 150 units @ 12 | 2 = 1,800 |
| Beginning inventory | 450 | \$5,100 |

8.5. Based upon the information in Prob. 8.4, determine the cost of goods sold for the period.

SOLUTION

There are two methods to determine the cost of those goods sold.

(a) Total goods available \$8,900
Ending inventory 5,100
Cost of goods sold \$3,800

Alternative Method

(b) Beginning inventory 200 units @ \$10 = \$2,000First purchase 150 units @ 12 = 1.800Cost of goods sold 350 units \$3,800

Since there were a total of 800 units available and 450 were on hand at the end of the period, 350 units were sold (800 - 450 = 350).

8.6. Product information for item 204 is as follows:

Jan. 1 Inventory 50 units @ \$10 = \$ 500Apr. 24 Purchase 30 units @ 8 = 240 July 10 Purchase 40 units @ 7 = 280 Nov. 15 Purchase 35 units @ 280 Units available 155 Total cost \$1,300

By a physical count, it is estimated that 95 units are left in the ending inventory. (a) What is the value of the ending inventory under FIFO valuation? (b) Determine the cost of goods sold.

SOLUTION

 (a) Nov. 15
 35 units @ \$8 = \$280

 July 10
 40 units @ 7 = 280

 Apr. 24
 20^* units @ 8 = 160

 Ending inventory
 95 units

(b) \$1,300 Total amount of goods $\begin{array}{rcl}
 & -720 \\
\hline
$580
\end{array}$ Cost of goods sold

Alternative Method

 Jan. 1
 50 units @ \$10 = \$500

 Apr. 24
 $\frac{10}{60}$ units @ $8 = \frac{80}{580}$

 Cost of goods sold
 $\frac{60}{60}$ units

Note that since there were 155 units available and 95 units were on hand, 60 units (155-95) were used to determine the cost of goods sold.

^{*}A total of 95 units are on hand. Since you have 75 units (35 + 40) from the two most recent purchases, only 20 of 30 units of the April 24 purchase are needed.

8.7. Based upon the following information, determine under LIFO valuation (a) ending inventory of 120 units and (b) its cost of goods sold.

| Beginning inventory | 100 units @ | 15 = | 1,500 |
|---------------------|-------------|------|-------|
| Apr. 30 | 100 units @ | 17 = | 1,700 |
| Sept. 30 | 100 units @ | 18 = | 1,800 |
| Dec. 30 | 100 units @ | 21 = | 2,100 |
| Available for sale | 400 units | \$ | 7,100 |

SOLUTION

(a) Beginning inventory
 100 units @ \$15 = \$1,500

 Apr. 30

$$20$$
 units @ $17 = 340$

 Ending inventory
 120 units @ $18 = 1,800$

 (b) Dec. 30
 100 units @ \$21 = \$2,100

 Sept. 30
 100 units @ $18 = 1,800$

 Apr. 30
 80 units @ $17 = 1,360$

 Cost of goods sold
 280 units

Proof: \$7,100 Available units

-1,840 Ending inventory

\$5,260 Cost of goods sold

8.8. Based upon the following information in a rising price market, determine (a) ending inventory of 260 units under LIFO and (b) the cost of goods sold.

| Beginning inventory | 100 units @ | \$ 5 = \$ | 500 |
|---------------------|-------------|-----------|-------|
| Mar. 30 purchase | 100 units @ | 6 = | 600 |
| Sept. 30 purchase | 100 units @ | 8 = | 800 |
| Nov. 30 purchase | 100 units @ | 9 = | 900 |
| Dec. 30 purchase | 100 units @ | 12 = | 1,200 |
| | 500 units | <u>\$</u> | 4,000 |

SOLUTION

(a) Beginning inventory 100 units @ \$5 = \$500 Mar. 30 purchase 100 units @ 6 = 600 Sept. 30 purchase 60 units @ 8 = 480 Ending inventory 260 units \$1,580

(b) The ending inventory is \$1,580 and the cost of goods sold is (\$4,000 - \$1,580 = \$2,420) or computed as

Dec. 30
 100
 units @ \$12 = \$1,200

 Nov. 30
 100
 units @
$$9 = 900$$

 Sept. 30
 40
 units @ $8 = 320$

 Cost of goods sold
 $240*$
 \$2,420

^{*}Since there were 500 units in the total inventory, and 260 remained, 240 units had been sold.

8.9. If in Prob. 8.8 the management had decided to delay the Dec. 30 purchase until the following year (in order to show a higher profit based on a lower cost) what would be the cost of goods sold without the last December purchase?

SOLUTION

Four hundred units (the December purchase of 100 units is eliminated) were available to be sold and 260 units remained on hand. Thus the 140 units sold will be costed as follows:

| Nov. 30* | 100 units @ \$9 | 3 = \$ 900 |
|--------------------|-----------------|-------------------|
| Sept. 30 | _40 units @ 8 | 3 = 320 |
| Cost of goods sold | 140 | \$1,220 |

^{*}No December purchase is considered.

Therefore, management now has a cost of \$1,220 rather than \$2,420 (Prob. 8.8), thus meeting its objective of higher profits. This lower cost will then yield a higher profit, yet it keeps the ending inventory at the same figure.

8.10. The beginning inventory and various purchases of product Y were as follows:

| Jan. 1 | Beginning inventory | 8 units @ \$1 | 0 = \$ 80 |
|---------|---------------------|---------------------|-----------|
| Apr. 4 | First purchase | 12 units @ 1 | 1 = 132 |
| July 16 | Second purchase | 16 units @ 1 | 2 = 192 |
| Aug. 25 | Third purchase | 15 units @ 1 | 3 = 195 |
| Dec. 24 | Fourth purchase | <u>18</u> units @ 1 | 4 = 252 |
| | Available for sale | 69 units | \$851 |

An inventory count disclosed that 30 units of product Y were on hand. (a) Determine the ending inventory under the Weighted Average method. (b) Determine the cost of goods sold.

SOLUTION

- (a) (1) $$851 \div 69 = 12.33 per unit
 - (2) $$12.33 \times 30 = 370 Ending inventory*

(b) Since 69 units were available for sale and 30 of those units were on hand, 69 - 30 = 39 units were sold. To determine the total cost of goods sold, multiply the units sold by the average cost of each unit. Therefore:

39 units
$$\times$$
 \$12.33 per unit = \$481

Alternative Method

| Total value of goods | \$851 |
|----------------------|-------|
| Ending inventory | -370 |
| Cost of goods sold | \$481 |

^{*}Rounded off to the nearest dollar.

8.11. In an inflationary market, Essex Corp. bought the following items:

| Jan. 1 | Beginning inventory | 150 units @ : | \$2.00 = \$300 |
|---------|---------------------|---------------|----------------|
| May 14 | First purchase | 300 units @ | 4.00 = 1,200 |
| Oct. 6 | Second purchase | 300 units @ | 5.00 = 1,500 |
| Nov. 14 | Third purchase | 250 units @ | 6.00 = 1,500 |
| Dec. 19 | Fourth purchase | | 7.50 = 1,500 |
| | Available for sale | 1,200 units | <u>\$6,000</u> |

If 225 units are left on hand, determine (a) the ending inventory in this inflationary period under the average cost method and (b) the cost of goods sold.

SOLUTION

- (a) $\$6,000 \div 1,200 \text{ units} = \5 per unit 225 units on hand $\times \$5 \text{ per unit} = \$1,125 \text{ Ending inventory}$
- (b) 1,200 units -225 units on hand =975 units sold $975 \times 5 per unit = \$4,875 Cost of goods sold

To prove that both items (a) and (b) are correct:

```
$1,125 Ending inventory

+4,875 Cost of goods sold

$6,000 Goods available for sale
```

8.12. In a deflationary market, Robert Kincaid bought the following items:

| Jan. 1 | Beginning inventory | 200 units @ : | \$7.50 = \$1,500 |
|---------|---------------------|---------------|------------------|
| May 14 | First purchase | 250 units @ | 6.00 = 1,500 |
| Oct. 6 | Second purchase | 300 units @ | 5.00 = 1,500 |
| Nov. 14 | Third purchase | 300 units @ | 4.00 = 1,200 |
| Dec. 19 | Fourth purchase | 150 units @ | 2.00 = 300 |
| | Available for sale | 1,200 units | \$6,000 |

If 225 units are left on hand, determine (a) the ending inventory in this deflationary period under the average cost method and (b) the cost of goods sold.

SOLUTION

- (a) $\$6,000 \div 1,200 \text{ units} = \5 per unit 225 units on hand $\times \$5 \text{ per unit} = \$1,125 \text{ Ending inventory}$
- (b) 1,200 units 225 units on hand = 975 units sold 975 units \times \$5 per unit = \$4,875 Cost of goods sold

Proof: \$1,125 + \$4,875 = \$6,000 Goods available for sale

Note that in both this problem (8.12) and Prob. 8.11, the ending inventory value is the same regardless of inflation (rising prices) or deflation (falling prices). This occurs because you are averaging the entire accounting period. In the next problem, different values do occur, because the inventory will be valued under FIFO and LIFO as well as average cost.

8.13. The beginning inventory and various purchases of product B were as follows:

| Jan. 1 | Balance | 8 units @ \$ | 510.00 |
|---------|----------|--------------|--------|
| Mar. 5 | Purchase | 12 units @ | 11.00 |
| June 9 | Purchase | 16 units @ | 12.00 |
| Aug. 20 | Purchase | 15 units @ | 13.00 |
| Nov. 1 | Purchase | 18 units @ | 14.00 |

An inventory count under the periodic system disclosed that 30 units of product B were on hand. Determine the ending inventory cost by (a) first-in-first out; (b) last-in-first-out; (c) weighted average.

SOLUTION

| (a) | Most recent purchase (Nov. 1) | 18 units @ \$14 = \$252 |
|-----|-------------------------------|-------------------------|
| | Next most recent (Aug. 20) | 12 units @ 13 = 156 |
| | Total units | 30 Total cost \$408 |
| (b) | Earliest cost (Jan. 1) | 8 units @ \$10 = \$ 80 |
| | Next earliest (Mar. 5) | 12 units @ 11 = 132 |
| | Next earliest (June 9) | 10 units @ 12 = 120 |
| | Total units | 30 Total cost \$332 |
| (c) | | 8 units @ \$10 = \$ 80 |
| | | 12 units @ 11 = 132 |
| | | 16 units @ 12 = 192 |
| | | 15 units @ 13 = 195 |
| | | 18 units @ $14 = 252$ |
| | | 69 Total cost \$851 |
| | Total units | 30 Total cost \$370* |

The weighted average cost per unit is $\$851 \div 69 = \12.33 . The cost of 30 units on hand is calculated as $\$12.33 \times 30 = \$370*$.

8.14. From the following information, determine the cost of inventory by the first-in-first-out (FIFO), the last-in-first out (LIFO), and the weighted average cost method.

| Unit Number | Inventory January 1, 19X8 | March Purchases | June Purchases | September Purchases | Number of Units in Inventory December 31, 19X8 |
|----------------|------------------------------|--------------------|-------------------|------------------------|--|
| 101 | 3 @ \$480 | 5 @ \$490 | 6 @ \$500 | 5 @ \$510 | 6 |
| 103 | 6 @ 208 | 10@ 210 | 11 @ 220 | 7 @ 222 | 7 |
| 105 | 4 @ 200 | 5 @ 200 | 4@ 210 | 2 @ 215 | 3 |
| 107 | 3 @ 225 | 9 @ 240 | 7 @ 245 | 4 @ 250 | 5 |
| 109 | 1 @ 295 | 1 @ 300 | 3 @ 315 | _ | 2 |

^{*}Rounded to the nearest dollar.

| 107 | 4 | 250 | 1,000 |
| 107 | 1 | 245 | 245 |
| 109 | 2 | 315 | 630 |
| Total inventory | | | \$7,119 |
| | | | |

| Unit Number | Quantity | Cost per Unit | Total Cost |
|-------------------|----------|---------------|---------------|
| LAST-IN-FIRST-OUT | | | |
| 101 | 3 | \$480 | \$1,440 |
| 101 | 3 | 490 | 1,470 |
| 103 | 6 | 208 | 1,248 |
| 103 | 1 | 210 | 210 |
| 105 | 3 | 200 | 600 |
| 107 | 3 | 225 | 675 |
| 107 | 2 | 240 | 480 |
| 109 | 1 | 295 | 295 |
| 109 | 1 | 300 | 300 |
| Total inventory | | | \$6,718 |

| WEIGHTED AVERAGE | COST | | |
|------------------|------|----------|------------|
| 101 | 6 | \$496.84 | \$2,981.04 |
| 103 | 7 | 215.35 | 1,507.45 |
| 105 | 3 | 204.67 | 614.01 |
| 107 | 5 | 241.30 | 1,206.50 |
| 109 | 2 | 308.00 | 616.00 |
| Total inventory | | | \$6,925.00 |
| | | | 1 40,7 20. |

8.15. Determine the gross profit under the (a) FIFO and (b) LIFO assumptions, given the following information:

| Sales | \$40,000 |
|-------------------------------|----------|
| Goods available for sale | 12,000 |
| Ending inventory (under FIFO) | 3,500 |
| Ending inventory (under LIFO) | 6,500 |

SOLUTION

| | | FIFO | | LIFO |
|--------------------------|-------------|----------|----------|----------|
| Sales | | \$40,000 | | \$40,000 |
| Cost of Goods Sold: | | | | |
| Goods Available for Sale | \$12,000 | | \$12,000 | |
| Less End. Inventory | 3,500 | | 6,500 | |
| Cost of Goods Sold | | 8,500 | | 5,500 |
| Gross Profit | | \$31,500 | | \$34,500 |

Since FIFO produced a lower ending inventory, the corresponding profit was lower. Also, as a proof, FIFO produced a higher cost of goods sold, therefore yielding a lower gross profit.

- 8.16. Based upon the following inventory information and other pertinent data, determine
 - (a) Ending inventory 36 units
 - (b) Cost of goods sold

(c) Gross profit

| Beginning inventory | 20 units @ 5 | \$ 9 = \$ 180 |
|---------------------|-------------------|-----------------------------|
| First purchase | 15 units @ | 8 = 120 |
| Second purchase | 22 units @ | 7 = 154 |
| Third purchase | <u>10</u> units @ | 6 = 60 |
| Available for sale | 67 units | \$514 |

| | | FIFO | LIFO |
|-----------------------|------------|------------|------------|
| Sales | | \$10,000 | \$10,000 |
| Cost of Goods Sold: | | | |
| Goods Avail. for Sale | \$514 | ! | 5514 |
| Less Ending Inventory | <u>(a)</u> | _ | <u>(a)</u> |
| Cost of Goods Sold | | <u>(b)</u> | <u>(b)</u> |
| Gross Profit | | <u>(c)</u> | <u>(c)</u> |

SOLUTION

In order to determine the gross profit, we must first determine the ending inventory and cost of goods sold under both the FIFO and LIFO methods.

Ending Inventory

FIFO Third purchase 10 units @ \$6 = \$60Second purchase 22 units @ 7 = 154First purchase 4 units @ 8 = 32 36 units \$246 (a)LIFO Beginning inventory 20 units @ \$9 = \$180 First purchase 15 units @ 8 = 120Second purchase 1 unit @ 7 = 7\$307 36 units (a)

Cost of Goods Sold*

| | FIFO | |
|---------------------|------------------------|-----|
| Beginning inventory | 20 units @ \$9 = \$180 | |
| First purchase | 11 units @ $8 = 88$ | |
| | 31 units \$268 | (b) |
| | LIFO | |
| Third purchase | 10 units @ $$6 = 60 | |
| Second purchase | 21 units @ 7 = 147 | |
| | 31 units \$207 | (b) |

^{*}Since there are available 67 units and 36 remain as inventory, 31 units (67 - 36) have been sold.

| | | FIFO | | | LIFO | |
|-----------------------|---------------|----------------|-------|-----|----------|-----|
| Sales | | \$10,000 | | | \$10,000 | |
| Cost of Goods Sold: | | | | | | |
| Goods Avail. for Sale | \$514 | | \$514 | | | |
| Less Ending Inventory | 246 (a) | | 307 | (a) | | |
| Cost of Goods Sold | - | <u>268</u> (b) | | | 207 | (b) |
| Gross Profit | | \$ 9,732 (c) | | | \$ 9,793 | (c) |

Alternative Inventory Valuation Methods

9.1 SPECIFIC IDENTIFICATION

Specific identification is a method of valuing inventory and determining the costs of goods sold by using the actual (specific) costs assigned to the units on hand and to those that were sold. In other words, the actual costs of the specific items sold constitute the cost of goods sold.

(A) Methodology

Under this method, it is necessary for the business to (1) keep records of the purchase price of each specific unit, (2) keep records of each specific unit sold, and (3) determine the ending inventory by totaling the original cost of all the specific units on hand. This cumbersome system should not be used for firms with large unit volumes and small unit prices (even computerized accounting systems and bar codes may not justify the use of this system), but it is ideal for small inventories of specifically identifiable items such as automobiles. This method gives the business the most accurate way of evaluating its inventory because actual costs and not valuations are used to determine the amount of the merchandise on hand at the end of the year.

EXAMPLE 1

A small auto business has the following three cars as of January 1, 19X8:

| Item | | Cost |
|-------|-----|----------|
| Blue | 642 | \$ 8,950 |
| Green | 795 | 12,420 |
| Black | 416 | 15,600 |

It purchased two additional cars during the month:

| Item | | Cost |
|-------|-----|----------|
| Gray | 814 | \$10,000 |
| White | 326 | 9,500 |

It sold one car during the month:

| Item | | Cost |
|-------|-----|----------|
| Green | 795 | \$12,420 |

In order to determine the cost of goods sold and the ending inventory as of January 31, 19X8, the following method is used:

| Jan. 1 | Inventory | 642 (Blue) | \$ 8,950 | |
|--------|---------------|-------------|-------------|----------|
| | | 795 (Green) | 12,420 | |
| | | 416 (Black) | 15,600 | |
| | | | | \$36,970 |
| Jan. | Purchases | 814 (Gray) | \$10,000 | |
| | | 326 (White) | 9,500 | 19,500 |
| Jan. | Cost of sales | 795 (Green) | | (12,420) |

Cost of goods sold (cost of sales) is determined by the amount of the specific items sold. In this case:

795 (Green) \$12,420

The ending inventory is identified as what remains on hand.

| Jan. l | 642 (Blue) | \$ 8,950 |
|--------|-------------|----------|
| | 416 (Black) | 15,600 |
| | 814 (Gray) | 10,000 |
| | 326 (White) | 9,500 |
| | | \$44,050 |

In other words, the beginning inventory plus purchases of \$56,470 (\$36,970 + \$19,500) less the cost of goods sold of \$12,420 would yield the value of the autos on hand as \$44,050.

(B) Flow of Costs

When the cost of administering the specific identification method becomes too high in money and time, firms usually revert to the systems discussed previously, which use an arbitrary assumption as to the flow of costs of goods through the business. As stated in previous chapters, those assumptions would be

- 1. Cost flow is in the order of purchases—first-in-first-out.
- 2. Cost flow is in the reverse of the order of purchases—last-in-first-out.
- 3. Cost flow is the average of all purchases—weighted average.

However, even though many units are bought and sold, as long as they can be specifically identified, the method of specific identification can be justified.

EXAMPLE 2

| | | | Unit | Total |
|---------|---------------------|-------|------|-------|
| | | Units | Cost | Cost |
| Jan. 1 | Beginning inventory | 10 | \$15 | \$150 |
| Mar. 10 | Purchase | 20 | 18 | 360 |
| June | Sales | (_8) | | |
| | | 22 | | \$510 |

Assuming that six out of the eight units sold in June are identified as being from the beginning inventory and the balance (2) from the March 10 purchase, the cost of the goods sold would be determined as follows:

Jan. 1 6 units @
$$$15 = $90$$

Mar. 10 2 units @ $18 = 36$
8 units sold costing $$126$

Thus, the cost of goods sold would be \$126, the ending inventory would be \$384 (\$510 - \$126), and the number of units on hand, by specific identification, would be 22 (30 - 8). In summary,

| | | | Unit | Total |
|---------|---------------------|-------|--------------|-------|
| | | Units | Cost | Cost |
| Jan. 1 | Beginning inventory | 4 | \$ 15 | \$ 60 |
| Mar. 10 | Purchase | 18 | 18 | 324 |
| | Ending inventory | 22 | | \$384 |

Note that the costs remaining in the ending inventory are the actual costs of the specific items that were not sold.

9.2 NET REALIZABLE VALUE

The inventory methods mentioned in the preceding chapter all reported inventory at cost. When inventory items are damaged, become obsolete, or can be replaced at prices less than original cost, it may become necessary to report the inventory at an amount that is less than cost.

When it appears that inventory is obsolete or damaged, it should be reported at its net realizable value, which is the amount that the inventory can be sold for (minus selling costs).

EXAMPLE 3

Inventory with a cost of \$8,000 is determined to be obsolete and can be sold for only \$3,000. This inventory should be reported at its net realizable value determined by

| Cost | \$8,000 |
|-------------------------------|---------|
| Less: Estimated selling price | _3,000 |
| Loss | \$5,000 |

The above loss of \$5,000 must be recognized as soon as it is known, even before the obsolete inventory is sold. The journal entry required to recognize this loss and to reduce the inventory amount would be

| Loss on Write-down of Inventory* | 5,000 | |
|----------------------------------|-------|-------|
| Inventory | | 5,000 |
| | | |
| *This is an expense account. | | |

EXAMPLE 4

If it costs \$200 to sell the inventory above, the loss would be \$5,200 and the value of the inventory would be reduced by that amount. The entry would be

The net realizable value method allows a company to recognize a loss when it occurs; thus, the

company will break even when the inventory is ultimately sold. The inventory is reported at its true value and is not carried at an amount which exceeds its future economic benefit.

9.3 LOWER OF COST OR MARKET (LCM)

(A) Introduction

When the value of the inventory has declined below its cost, a firm may choose the lower of cost or market (LCM) method. This method involves a comparison between the cost of inventory on hand and its current replacement cost. The lower of the two amounts is then used, which is a departure from the normal historical cost principle. Any loss in value should be recognized in the accounting period in which it occurred. This immediate recognition of loss is accomplished by an adjusting entry.

(B) The Theory of Conservatism

This method is used because accountants generally feel that assets should be valued conservatively, thereby not overstating their true value regardless of cost. Thus, when the price of an item is below its purchase cost, market price rather than cost may be used.

This method is acceptable in inventory valuation because a decline in the replacement cost can be accompanied by a reduction in the selling price of the merchandise, thus reducing the value of the inventory. It is used with the FIFO and weighted average methods of inventory valuation, but not with LIFO, for tax purposes. However, there is nothing to prevent its use for financial accounting purposes.

EXAMPLE 5

The total cost of the ending inventory was \$1,605 by a physical inventory count under the FIFO method. However, because of a decline in the market price of goods, replacement of the inventory on an item-by-item basis could be obtained for \$1,300. What is the effect of this market price revaluation?

There is a loss of \$305 on the value of the inventory.

| Inventory under FIFO | \$1,605 |
|-----------------------------|----------|
| Current replacement cost | _1,300 |
| Market value decline (loss) | (\$ 305) |

If LCM is used, this loss will affect the cost of goods sold, producing a higher cost and reducing net income by \$305.

However, if at year's end the inventory on the balance sheet is reported at \$1,605 (cost), GAAP requires that under LCM inventory, an adjusting entry be made crediting the inventory and debiting the loss to be recognized in the current year.

(C) Application

The application of the item-by-item method is illustrated below:

EXAMPLE 6

| | | Uni | t Price | | |
|-------------|----------|--------|---------|-----------|---------|
| Description | Quantity | Cost | Market | Valuation | LCM |
| Item A | 200 | \$2.00 | \$2.25 | Cost | \$ 400 |
| Item B | 100 | 1.75 | 1.50 | Market | 150 |
| Item C | 150 | 1.80 | 1.00 | Market | 150 |
| Item D | 300 | 3.20 | 2.00 | Market | 600 |
| | | | | | \$1,300 |

Note that without LCM, the valuation of the merchandise would be:

| Description | Quantity | Unit Price | Valuation |
|-----------------|----------|------------|-----------|
| Item A | 200 | \$2.00 | \$ 400 |
| Item B | 100 | 1.75 | 175 |
| Item C | 150 | 1.80 | 270 |
| ltem D | 300 | 3.20 | 960 |
| Total inventory | cost | | \$1,805 |

(D) Total Replacement Cost (LCM)

Although item-by-item valuation is the most popular valuation method under LCM, the total replacement cost of the merchandise can also be used to value the inventory. Using the figures in Example 6, the total cost or market value would be computed as shown in Example 7.

EXAMPLE 7

| | | Uni | t Price | Total | Total |
|-------------|----------|--------|---------|---------|---------|
| Description | Quantity | Cost | Market | Cost | Market |
| Item A | 200 | \$2.00 | \$2.25 | \$ 400 | \$ 450 |
| Item B | 100 | 1.75 | 1.50 | 175 | 150 |
| Item C | 150 | 1.80 | 1.00 | 270 | 150 |
| Item D | 300 | 3.20 | 2.00 | 960 | 600 |
| | | | | \$1,805 | \$1,350 |

Inventory valuation, lower of total cost or total market \$1,350

When the total replacement cost of the inventory is used (even though an item may cost more to replace than its original cost), the concept of conservation still applies.

9.4 ESTIMATING VS. PHYSICAL COUNT

Although a physical inventory is taken once a year, there are occasions when the value of the inventory must be known during the year. When interim financial statements are requested (monthly, quarterly, or semiannually), an inventory amount must be estimated. If no physical count is taken, the amount of inventory must be estimated. Also, in the event of fire or any other casualty, an amount must be reported as a loss. Two of the most popular methods of estimating inventory (when no physical count is used) are the gross profit method and the retail method.

(A) Gross Profit Method

This method rearranges the Cost of Goods Sold section of the income statement. As stated previously, the cost-of-goods-sold formula is

Inventory (beginning)

+ Net purchases
Goods available for sale

- Inventory (ending)
Cost of goods sold

Note that when you subtract inventory (ending) from the goods available for sale, the cost of goods sold is determined. Conversely, if you subtract the estimated cost of goods sold from the goods

available for sale, the value of the inventory (ending) will result. The estimated cost of goods sold figure is arrived at by using the past year's gross profit percentage and subtracting the resulting amount from sales.

EXAMPLE 8

During the past five years, a company's gross profit averaged 30% of sales. If the sales for this interim period are \$70,000, the inventory at the beginning of the period is \$30,000, and the net purchases are \$50,000, you would estimate the inventory (ending) under the gross profit method as follows:

| Add: Net Purchases 50,000 Goods Available for Sale \$80,000 Sales \$70,000 Estimated Gross Profit (30%) 21,000* Estimated Cost of Goods Sold 49,000 Estimated Inventory (Ending) \$31,000 | | \$30,000 |
|---|----------|----------|
| Sales \$70,000 Estimated Gross Profit (30%) 21,000* Estimated Cost of Goods Sold 49,000 | | 50,000 |
| Estimated Gross Profit (30%) Estimated Cost of Goods Sold 49,000 | | \$80,000 |
| Estimated Cost of Goods Sold 49,000 | \$70,000 | |
| | 21,000* | |
| Estimated Inventory (Ending) \$31,000 | | 49,000 |
| - | | \$31,000 |
| | | |
| *(\$70,000 × 30%) | | |

This method of estimating ending inventory is also useful when a calamity such as a fire, flood, or theft destroys a company's inventory. It is obvious that a dollar amount must be assigned to the inventory lost before any insurance claim can be made. Although this may appear to be an impossible task, it is possible to build up to the inventory figure. For example, the dollar amounts of all the sales, purchases, and beginning inventory can be obtained from the previous year's financial statements. Also, information can be further provided by customers, suppliers, sellers, etc.

EXAMPLE 9

A fire occurred in a retail store and destroyed most records. If the average gross profit rate, based upon the last three years of operations, is 40%, and the net sales (according to various sales records) is \$90,000, determine the ending inventory by the gross profit method of estimation. Assume that outside verification determined that the beginning inventory was \$40,000 and all purchases (net) were \$76,000.

| | Inventory (beginning) | \$ 40,000 | |
|---|------------------------------|-----------|--------------------------|
| + | Net purchases | 76,000 | |
| | Goods available for sale | \$116,000 | |
| - | Estimated cost of goods sold | 54,000* | |
| | Estimated ending inventory | \$ 62,000 | |
| * | Sales | \$90,000 | |
| - | Gross profit estimate | 36,000 | $(\$90.000 \times 40\%)$ |
| | Cost of goods sold estimated | \$54,000 | , |

Bear in mind that the gross profit method is not intended to replace the physical inventory count but is used to estimate the inventory cost when a physical count is not deemed possible. This method is based on the assumption that the rate of gross profit has been fairly stable in the past periods under examination and will remain so in the future. Without this stability, calculations of inventory using the gross profit method will be inaccurate and not useful in any accounting procedure. Since this method is based solely on estimation, it is not acceptable for tax purposes unless no other physical inventory method is available.

(B) Retail Inventory Method

The retail inventory method of inventory costing is used by retail businesses, particularly department stores. Department stores usually determine gross profit monthly but take a physical inventory only on an annual basis. The retail inventory method permits a determination of inventory at any time of the year and also produces a comparison of the estimated ending inventory with the physical inventory ending inventory, both at retail prices. This will help to identify any inventory shortages resulting from theft and other causes.

This method, similar to the gross profit method previously mentioned, is used to estimate the dollar cost of inventory (ending) when a physical count cannot be done. The procedure for determination under the retail inventory method is as follows:

- 1. Beginning inventory and purchases must be recorded both at cost and at selling price.
- 2. Total goods available for sale are then computed on both bases, cost and selling price,
- 3. Sales for the period are deducted from the goods available for sale at selling price.
- 4. Ending inventory at selling price is the result of step (3). This amount is then converted to ending inventory at cost by multiplying by the appropriate markup ratio.

EXAMPLE 10

| | | Cost | Selling Price |
|---------|--|-----------|---------------|
| Step 1. | Beginning Inventory | \$280,000 | \$400,000 |
| | + Net Purchases for Period | 110,000 | 180,000 |
| Step 2. | Goods Available for Sales | \$390,000 | \$580,000 |
| Step 3. | - Net Sales for Period | | 340,000 |
| | Ending Inventory at Selling Price | | \$240,000 |
| Step 4. | Cost to Selling Price Ratio (\$390,000 ÷ \$580,000) = 67% | | |
| | Ending Inventory at Cost ($$240,000 \times 67\%$) = $$160,800$ | | |

In the above example, the cost percentage is 67%, which means that the inventory and purchases are marked up by an average of 33% (100% - 67%).

Certainly not all items in the goods available for sale are marked up exactly 33%. (Some will be marked higher and some lower than 33%.) In other words, the retail method will use a percentage that represents an average of markup cost. Suppose a retailer had different categories of inventory, each with a different cost ratio. How would the firm use the retail method to estimate the total cost of all the inventory on hand at any time of the year? The retailer would simply apply the retail inventory method to each category separately, using that category's specific cost ratio, then add the costs of the categories to determine the estimate of the overall cost of inventory.

(C) Summary of Both Methods

The major difference between the gross profit method and the retail inventory method is that the former uses the historical gross profit rates, and the latter uses the percentage markup (cost-to-selling-price ratio) from the current period. In other words, the gross profit method uses past experience as a basis, whereas the retail method uses current experience.

The gross profit method is usually less reliable because past situations may be different from current ones. Remember that both methods are useful because they allow the accountant to prepare financial statements more frequently without taking the time to make a physical count each time or maintaining perpetual inventory records. However, the annual physical count is necessary, as it will disclose any loss due to theft or other shrinkage conditions and will serve as the basis for an adjustment to all inventory records and the Inventory account.

Summary

Solved Problems

9.1. Based upon the inventory transactions below, determine by means of specific identification (a) the cost of goods sold and (b) the ending inventory.

| | | Units | Unit Cost | Total Cost |
|--------|---------------------|-------|--------------|---------------|
| Jan. 1 | Beginning inventory | 5 | \$6 | \$ 30 |
| Feb. 5 | Purchases | 15 | 9 | 135 |
| Apr. 9 | Purchases | 10 | 8 | 80 |
| June | Sales | (12) | | |
| | | | | \$245 |

Assume that the 12 units sold were

Jan 1 Inventory 4 Feb. 5 Purchases 4 Apr. 9 Purchases 4

SOLUTION

Cost of goods sold Jan. 1 Inventory 4 units @ \$6 = \$24 Feb. 5 Purchases 4 units 9 = 36 Purchases @ 8 = 32 Apr. 9 4 units 12 units \$92 Total cost of goods sold (b) Ending inventory Jan. 1 1 unit Feb. 5 11 units Apr. 9 @ 8 = 6 units 48 18 \$153

Proof: Total inventory before sale

Less: Cost of goods sold

Specific inventory on hand

\$153

9.2. Based on the data below, determine the value of the inventory at the lower of cost or market by completing the table.

| Item | Units | Unit Cost | Market Value |
|------|-------|-----------|--------------|
| A | 100 | \$1.00 | \$1.50 |
| В | 150 | 4.00 | 4.50 |
| С | 200 | 6.00 | 5.00 |
| D | 250 | 8.00 | 7.00 |

| Item | Units | Basis | Lower of Cost or Market |
|------|-------|-------|-------------------------|
| A | 100 | | |
| В | 150 | - | |
| C | 200 | | |
| D | 250 | | |

SOLUTION

| Item | Units | Basis | Lower of Cost or Market |
|------|-------|--------|-------------------------|
| Α | 100 | \$1.00 | \$ 100 |
| В | 150 | 4.00 | 600 |
| C | 200 | 5.00 | 1,000 |
| D | 250 | 7.00 | 1.750 |

Value of inventory \$3,450

Value of inventory

9.3. Inventory costing \$12,000 has been determined to be obsolete and can now be sold only for \$8,000. (a) Record the journal entry needed to record this loss. (b) If there were costs of \$600 to sell the merchandise in (a), what journal entry would be needed to record this information, and (c) what is the value of the inventory after the loss is considered?

SOLUTION

| (a) | Loss on Write-down of Invento | ory 4,000 | |
|-----|--------------------------------|----------------------|----------|
| | Inventory | | 4,000 |
| (b) | Loss on Write-down of Invento | ory 4,600 | |
| | Inventory | | 4,600 |
| (c) | The value of the inventory wor | ıld be calculated as | |
| | | | *** |
| | Cost | | \$12,000 |
| | Loss | | 4,000 |
| | | | \$ 8,000 |
| | Selling cost | s | 600 |
| | Ending inve | entory | \$ 7,400 |

9.4. Using the following data, determine the value of the inventory under the item-by-item method of LCM valuation.

| | | Valuation | | LCM | |
|-------|-------|-----------|--------|------|--------|
| Items | Units | Cost | Market | Cost | Market |
| Α | 10 | \$22 | \$21 | | |
| В | 15 | 8 | 10 | | |

9.6. Using the following data furnished from various sources, determine the inventory of Adam Israel that was destroyed by fire, using the gross profit method.

| Beginning inventory | \$20,000 |
|----------------------|----------|
| Net purchases | 40,000 |
| Net sales | 65,000 |
| Gross profit average | 25% |

| Inventory (beginning) | | \$20,000 |
|------------------------------|--------------------------------|----------|
| Add: Net purchases | | 40,000 |
| Goods available for sale | | \$60,000 |
| Sales | \$65,000 | |
| Estimated gross profit | $16,250 (65,000 \times 25\%)$ |) |
| Estimated cost of goods sold | | 48,750 |
| Estimated ending inventory | | \$11,250 |

9.7. A flood destroyed most records and inventory of the Noah Company in March 19X8. After investigating outside records from various sources, the following information was obtained:

| Inventory, | 12/31/X7 | \$24,000 |
|---------------|---------------------|----------|
| Purchases | during 19X8 | 56,000 |
| Purchase 1 | returns during 19X8 | 6,000 |
| Net sales | during 19X8 | 100,000 |
| Gross pro | fit rate: | |
| 19X5 | 30% | |
| 19 X 6 | 40% | |
| 19X7 | 50% | |

Determine the amount of the inventory loss to be claimed during 19X8 under the gross profit method.

SOLUTION

| Inventory, 1/1/X8* | | | \$24,000 |
|--------------------------------------|-----------|---------------------------|----------|
| Purchases | \$56,000 | | |
| Less: Purchase returns | 6,000 | | |
| Net purchases | | | 50,000 |
| Goods available for sale | | | \$74,000 |
| Sales | \$100,000 | | |
| Estimated gross profit | 40,000 | $(100,000 \times 40\%)**$ | |
| Estimated cost of goods sold | | | 60,000 |
| Estimated ending inventory, 12/31/X8 | | | \$14,000 |

Cost

Retail

9.8. Determine by the retail method the estimated cost of the December 31 inventory.

| | December 1, inventory | \$290,000 | \$400,000 |
|----------|--|-------------|-----------|
| | Dec. 1-31, purchases | 110,000 | 180,000 |
| | Goods available for sale | \$400,000 | \$580,000 |
| | Sales for December | | 340,000 |
| SOLUTION | | | |
| | | Cost | Retail |
| | Dec. 1, inventory | \$290,000 | \$400,000 |
| | Dec. 1-31, purchases | 110,000 | 180,000 |
| | Goods available for sale | \$400,000 | \$580,000 |
| | Sales for month | | 340,000 |
| | Dec. 31, inventory at retail | | \$240,000 |
| | Inventory at estimated cost (\$240,000 × 67%*) | \$160,800 | |

^{*}Cost ratio 67% (\$400,000 ÷ \$580,000)

^{*}The ending inventory of 12/31/X7 becomes the beginning inventory of 1/1/X8.

^{**}The average of $30\% + 40\% + 50\% \div 3 = 40\%$.

9.9. Estimate the cost of inventory at May 31 by the retail method.

| | | Cost | Retail |
|----------|--|-------------------|----------|
| | May 1, inventory | \$18,000 | \$24,000 |
| | May purchases | 34,000 | 41,000 |
| | Sales for May | | 37,000 |
| SOLUTION | | | |
| | | Cost | Retail |
| | May 1, inventory | \$18,000 | \$24,000 |
| | May purchases | 34,000 | 41,000 |
| | Goods available for sale $(\$52,000 \div \$65,000 = 80\% \text{ ratio})$ | \$52,000 | \$65,000 |
| | Sales for May | | 37,000 |
| | May 31, inventory at retail | | \$28,000 |
| | May 31, inventory at estimated cost | <u>\$22,400</u> * | |
| | *(\$28,000 × 80%) | | |

^{9.10.} Determine by the retail method the estimated cost of the ending inventory on December 31.

| | | Cost | Retail |
|----------|--|-------------|-----------|
| | Inventory, Dec. 1 | \$200,000 | \$300,000 |
| | Purchases, Dec. 1-31 | 105,000 | 190,000 |
| | Goods available for sale | \$305,000 | \$490,000 |
| | Sales, Dec. 1-31 | | \$400,000 |
| SOLUTION | | | |
| | | Cost | Retail |
| | Inventory, Dec. 1 | \$200,000 | \$300,000 |
| | Purchases, Dec. 1-31 | 105,000 | 190,000 |
| | Goods available for sale | \$305,000 | \$490,000 |
| | Net sales, Dec. 1-31 | | 400,000 |
| | Inventory, Dec. 31 | | \$ 90,000 |
| | Ratio of cost to retail $\frac{305,000}{490,000} = 62\%$ | | |
| | Ending inventory at cost (\$90,000 \times 62%) | \$55,800 | |

9.11. A fire destroyed the inventory of the Chase Bike store. Based upon past records, it was determined that the gross profit rate averaged 45%, the net sales were \$160,000, ending inventory of the previous year was \$50,000, and net purchases during the year were \$70,000. What is the amount the bike company can claim on its damaged inventory on hand?

| Inventory (beginning) | | | \$ 50,000 |
|------------------------------|-----------|-------------------|-----------|
| Net purchases | | | 70,000 |
| Goods available for sale | | | \$120,000 |
| Sales | \$160,000 | | |
| Estimated gross profit | 72,000 | (\$160,000 × 45%) | |
| Estimated cost of goods sold | | | 88,000 |
| Estimated inventory (ending) | | | \$ 32,000 |

9.12. Determine the total estimated inventory destroyed by fire under the retail inventory method for two different inventories of the Happy Department Store. (This problem is actually a combination of two former problems.)

| | Cost | Retail |
|---------------|-----------|-----------|
| Inventory I | \$280,000 | \$400,000 |
| Net purchases | 110,000 | 180,000 |
| Net sales | | 340,000 |
| Inventory II | \$ 18,000 | \$ 24,000 |
| Net purchases | 34,000 | 41,000 |
| Net sales | | 37,000 |

SOLUTION

| Cost | Retail |
|-----------|-----------------------------------|
| \$280,000 | \$400,000 |
| 110,000 | 180,000 |
| \$390,000 | \$580,000 |
| | 340,000 |
| | \$240,000 |
| \$160,800 | |
| | \$280,000 110,000 \$390,000 |

^{*}Cost ratio 67% (\$390,000:\$580,000)

| Inventory II | Cost | Retail |
|--|-----------|----------|
| Inventory (beginning) | \$18,000 | \$24,000 |
| Net purchases | 34,000 | 41,000 |
| Goods available for sale $($52,000 \div $65,000 = 80\% \text{ ratio})$ | \$52,000 | \$65,000 |
| Sales | | |
| Inventory at retail | | 37,000 |
| Inventory at estimated cost | \$22,400* | \$28,000 |

^{*(\$28,000 × 80%)}

Total estimated inventory at cost:

| Inventory I | \$160,800 |
|-----------------------------------|-----------|
| Inventory II | 22,400 |
| Total estimated inventory at cost | \$183,200 |

9.13. Determine the ending inventory under the retail inventory method using the following merchandising data for two specific inventories.

| | | Cost | Retail |
|-------------|---|----------|-----------------|
| Inventory A | Inventory beginning | \$25,000 | \$ 40,000 |
| | Net purchases | 53,000 | 90,000 |
| | Net sales | | 110,000 |
| Inventory B | Inventory beginning | \$14,000 | \$ 22,000 |
| | Net purchases | 70,000 | 98,000 |
| | Net sales | | 90,000 |
| SOLUTION | | | |
| | Inventory A | Cost | Retail |
| | Inventory (beginning) | \$25,000 | \$ 40,000 |
| | + Net purchases | _53,000 | 90,000 |
| | Goods available for sale | \$78,000 | \$130,000 |
| | Net sales | | _110,000 |
| | Inventory (ending) | | \$ 20,000 |
| | Ratio of cost to retail price $\frac{$78,000}{$130,000} = 60\%$ | | |
| | Ending inventory at cost ($$20,000 \times 60\%$) | | \$12,000 |
| | | | - |
| | Inventory B | Cost | Retail |
| | Inventory (beginning) | \$14,000 | \$ 22,000 |
| | + Net purchases | 70,000 | 98,000 |
| | Goods available for sale | \$84,000 | \$120,000 |
| | - Net sales | | 90,000 |
| | Ending inventory | | \$ 30,000 |
| | Ratio of cost to retail price $\frac{$84,000}{$120,000} = 70\%$ | | |
| | Ending inventory at cost ($$30,000 \times 70\%$) Then add: | | <u>\$21,000</u> |
| | Ending inventory (A) at cost | \$1 | 2,000 |
| | Ending inventory (B) at cost | | 1,000 |
| | Total ending inventory at cost | | 3,000 |
| | | == | |

Note that the total ending inventory at retail would be \$50,000 (\$20,000 + \$30,000).

Repetitive Transactions

10.1 INTRODUCTION

In earlier sections, the accounting principles discussed were illustrated in terms of small businesses with relatively few transactions. Each transaction was recorded by means of an entry in the general journal, then posted to the related account in the general ledger.

Such a simple system becomes altogether too slow and cumbersome when transactions in various categories occur by the hundreds or thousands each month. In that case, it is more practical to group the repetitive transactions according to type (sales, purchases, cash, etc.) and to provide a separate special journal for each type. Entries that are not of a repetitive nature, such as corrections, adjusting entries, and closing entries, will still be entered in the general journal.

The advantages of using special journals where there are numerous repetitive transactions may be summarized as follows:

- 1. Reduces detailed recording. In the special journal, each transaction is entered on a single line designed to provide all necessary information. For example, a sales transaction is recorded on a single line indicating a debit to the customer's account and giving the customer's name, the date, the amount, and any other desired data (such as the invoice number). Under the special-journal concept, individual posting is eliminated. Only one posting for the total amount is made to the appropriate ledger account at the end of the month. Thus, if a firm had 1,000 sales on account during the month, the Sales account would be credited once, not 1,000 times.
- Permits better division of labor. Each special journal can be handled by a different person, who will become more familiar with the special work and therefore more efficient. Just as important, journalizing can be done by a number of people working simultaneously, rather than consecutively.
- 3. Permits better internal control. In large firms, having separate journals allows the work to be arranged in such a way that no one person has conflicting responsibilities, for example, the receipt and the recording of cash. Thus, no employee can steal received cash and then make a journal entry to conceal the theft.

10.2 SPECIAL LEDGERS (SUBSIDIARY LEDGERS)

Further simplification of the general ledger is brought about by the use of subsidiary ledgers. In particular, for those businesses that sell goods on credit and find it necessary to maintain a separate

account for each customer and each creditor, a special accounts receivable ledger and an accounts payable ledger eliminate multiple entries in the general ledger.

The advantages of special or subsidiary ledgers are similar to those of special journals. These are

- 1. **Reduces ledger detail.** Most of the information will be in the subsidiary ledger, and the general ledger will be reserved chiefly for summary or total figures. Therefore, it will be easier to prepare the financial statements.
- 2. **Permits better division of labor.** Here again, each special or subsidiary ledger may be handled by a different person. Therefore, one person may work on the general ledger accounts, while another person may work simultaneously on the subsidiary ledger.
- 3. **Permits a different sequence of accounts.** In the general ledger, it is desirable to have the accounts in the same sequence as in the balance sheet and income statement. As a further aid, it is desirable to use numbers to locate and reference the accounts, as explained in Sec. 3.5. However, for accounts receivable and accounts payable, which involve names of customers or companies, it is preferable to have the accounts in *alphabetical* sequence.
- 4. Permits better internal control. Better control is maintained if a person other than the person responsible for the general ledger is responsible for the subsidiary ledger. For example, the accounts receivable or customers' ledger trial balance must agree with the balance of the Accounts Receivable account in the general ledger. The general ledger account acts as a controlling account, and the subsidiary ledger must agree with the control. No unauthorized entry could be made in the subsidiary ledger, as it would immediately put that record out of balance with the control account.

The idea of control accounts introduced above is an important one in accounting. Any group of similar accounts may be removed from the general ledger and a controlling account substituted for it. Not only is another level of error protection thereby provided, but the time needed to prepare the general ledger trial balance and the financial statements is further reduced.

10.3 USE OF SPECIAL JOURNALS

The principal special journals are the sales journal, purchases journal, cash receipts journal, and cash disbursements journal.

We shall describe each and illustrate the relationship between the special journal and the general ledger, on the one hand, and the relationship between the special journal and the subsidiary ledger, on the other hand. Also, it is desirable to point out in each case the relationship of the controlling account to the subsidiary ledger.

(A) Sales Journal

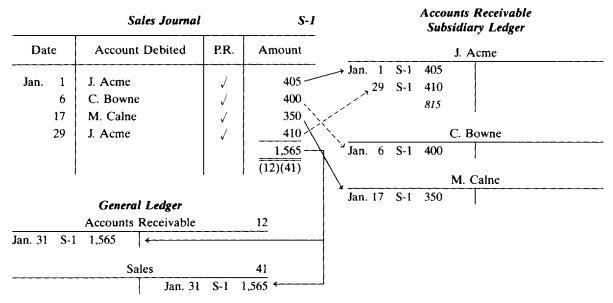

The entry for the individual sale on account is a debit to Accounts Receivable (and to the customer's account) and a credit to Sales. Only sales on account are recorded in the sales journal. Cash sales ordinarily do not require the customer's name and are recorded in the cash receipts journal, usually in a daily total.

Referring to Example 1 below, we have the following procedure for recording and posting the sales journal:

- 1. Record the sale on account in the sales journal.
- 2. Post from the sales journal to the individual accounts in the subsidiary ledger.
- 3. Record the posting of the individual accounts in the post reference (P.R.) column. A check indicates that the posting has been made.

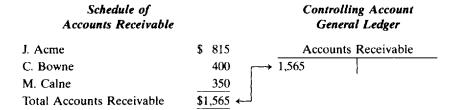

4. At the end of the month, total the amount of sales made on account. This total is posted in the general ledger to the Accounts Receivable account (12) as a debit and to the Sales account (41) as a credit. In the general ledger the source of the entry (S-1) is entered in each account.

EXAMPLE 1

The balances in the accounts receivable ledger may be summarized by listing each customer and the amount he or she owes. The accounts receivable trial balance, known as a schedule of accounts receivable, should agree with the controlling account.

EXAMPLE 2

(B) Purchases Journal

In most businesses, purchases are made regularly and are evidenced by purchase invoices issued to creditors. In previous chapters the entry to record the purchase of goods on account had the following form:

Where there are many transactions involving purchases of merchandise for resale, of supplies to be used in the business, of equipment, etc., the labor-saving features of a special purchases journal may be utilized. The basic principles that apply to the sales journal also apply to the purchases journal. However, because of the variety of items that are purchased, more columns are needed in the purchases journal.

For the sales journal (see Example 2), the schedule of accounts receivable total equaled the controlling account in the general ledger. In the purchases journal, the individual transactions with the creditors (accounts payable) are posted to the creditor's account in the subsidiary ledger, while the total is posted to the controlling account, Accounts Payable.

EXAMPLE 3

- Jan. 2 Purchased merchandise on account from Altman Company, \$2,000
 - 8 Purchased supplies on account from Bay Company, \$600
 - 15 Purchased equipment on account from Calloway Company, \$5,000
 - 15 Purchased land from J. Smith on account, \$1,000
 - 21 Purchased additional supplies on account from Bay Company, \$200
 - 28 Purchased additional merchandise on account from Altman Company, \$1,000

Purchases Journal

P-1 (1)

| | | } | 9,800 | 3,000 | 800 | | | 6,000 |
| | | | (21) | (51) | $\overline{\overline{(14)}}$ | | | $\overline{(\sqrt{)}}$ |
| | | (2) | (3) | (3) | (3) | | | (4) |

Notes:

- (1) P-1 denotes the page number (1) of the purchases journal.
- (2) The individual amounts will be posted as credits to their respective accounts in the accounts payable subsidiary ledger. The check marks in the purchases journal indicate such postings.
- (3) Accounts Payable, Purchases, and Supplies are posted to the respective accounts in the general ledger as totals only.
- (4) The sundry amount of \$6,000 is not posted as a total; instead, the individual amounts are posted, as many different accounts may be affected each month.

General Ledger

| | | Supplies | 14 | Accounts Payable 21 |
|---------|-----|-----------|-------------|---------------------|
| Jan. 31 | P-1 | 800 | | Jan. 31 P-1 9,800 |
| | | Land | 17 | |
| Jan. 15 | P-1 | 1,000 | | |
| | | Equipment | 18 | Purchases 51 |
| Jan. 15 | P-1 | 5,000 | | Jan. 31 P-1 3,000 |

Accounts Payable Subsidiary Ledger

| Altman Company | | | Bay Company | |
|------------------|-----|-------|-------------|-------|
| Jan. 2 | P-1 | 2,000 | Jan. 8 P-1 | 600 |
| 28 | P-1 | 000,1 | 21 P-1 | 200 |

| Calloway Company | | | J. Smith | |
| Jan. 15 | P-1 | 5,000 | Jan. 15 P-1 | 1,000 |

To prove that the accounts payable ledger is in balance, the total owed to the four companies must agree with the balance in the Accounts Payable control account.

Schedule of Accounts Payable

| Altman Company | \$3,000 | Accounts Payable |
|------------------|-----------|------------------|
| Bay Company | 800 | P-1 \$9.800 ← |
| Calloway Company | 5,000 | 1-1 \$5,000 |
| J. Smith | 1,000 | |
| Total | \$9,800 ← | |

(C) Cash Receipts Journal

Transactions involving cash are recorded in either the cash receipts or the cash disbursements journal. Items that increase the firm's cash position are recorded in the cash receipts journal. Increases in cash may come from such sources as collections from customers, receipts from cash sales, investments, and collection of interest and principal on notes held by the firm (notes receivable).

The procedure for recording and posting the cash receipts journal is described below and illustrated in Example 4.

- 1. The total of the cash column is posted as a debit to the Cash account.
- 2. Each amount is posted to the individual customer's account. The total is posted as a credit to the Accounts Receivable account in the general ledger.
- 3. The total of the sales credit column is posted as a credit to the Sales account.
- 4. Each item in the sundry column is posted individually to the general ledger. The total of the sundry column is not posted.
- 5. The accuracy of the journal (that is, the equality of debits and credits) is verified by adding the three credit columns and comparing the total with the debit column.

EXAMPLE 4

The month of February saw the following cash-increasing transactions:

- Feb. 2 Received \$600 from J. Acme in partial settlement of his bill
 - 5 Returned defective merchandise bought for cash and received \$80 in settlement [see Sec. 10.4 (B)]
 - 14 Cash sales for the first half of the month, \$3,800
 - 24 Received a check from C. Bowne in full settlement of her account, \$400
 - 28 Cash sales for the second half of the month, \$3,720

As shown in Example 2, there are balances in Mr. Acme's, Ms. Bowne's, and Mr. Calne's accounts of \$815, \$400, and \$350 respectively.

| | Bal. | 350 | |

(D) Cash Disbursements Journal

The cash disbursements journal, also known as the cash payments journal, is used to record all transactions that *reduce* cash. These transactions may arise from payments to creditors, cash purchases (of supplies, equipment, or merchandise), the payment of expenses (salary, rent, insurance, etc.), or personal withdrawals.

The procedure for recording and posting the cash disbursements journal parallels that for the cash receipts journal:

- 1. A check is written each time a payment is made; the check numbers provide a convenient reference, and they help in controlling cash and in reconciling the bank account.
- 2. The cash credit column is posted in total to the general ledger at the end of the month.
- 3. Debits to Accounts Payable represent cash paid to creditors. These individual amounts will be posted to the creditors' accounts in the accounts payable subsidiary ledger. At the end of the month, the total of the accounts payable column is posted to the general ledger.
- 4. The sundry column is used to record debits for any account that cannot be entered in the other special columns. These would include cash purchases of equipment and inventory, payment of expenses, and cash withdrawals. Each item is posted separately to the general ledger. The total of the sundry column is not posted.

10.4 SPECIAL SITUATIONS

(A) Discounts

To induce a buyer to make payment before the amount is due, the seller may allow the buyer to deduct a certain percentage of the bill. If payment is due within a stated number of days after the date of invoice, the number of days will usually be preceded by the letter "n," signifying net. For example, bills due in 30 days would be indicated by n/30.

A 2 percent discount offered if payment is made within 10 days would be indicated by 2/10. If the buyer has a choice of either paying the amount less 2 percent within the 10-day period or paying the entire bill within 30 days, the terms would be written as 2/10, n/30.

^{**}From the purchases journal, Example 3.

EXAMPLE 6

A sales invoice totaling \$800 and dated January 2 has discount terms of 2/10, n/30. If the purchaser pays on or before January 12 (10 days after the date of purchase), he may deduct \$16 (\$800 \times 2%) from the bill and pay only \$784. If he chooses not to pay within the discount period, he is obligated to pay the entire amount of \$800 by February 1.

Some companies offer a varied cash discount depending on when payment is made, for example, 2/10, 1/20, net 30. This means that the company offers a 2 percent discount if the buyer pays within 10 days; if he or she pays after 10 days but within 20 days of purchase, he or she gets a 1 percent discount; the net amount is due within 30 days.

EXAMPLE 7

A \$600 invoice dated April 6 has terms of 3/10, 2/15, n/30. If the bill is paid by April 16, the discount will be \$18. If it is paid after April 16 but by April 21, the discount will be \$12. The entire bill of \$600 must be paid by May 6.

Although in most cases the cash discount period is computed from the invoice or purchase date, it may also be computed from either the date of the receipt of the goods (ROG) or the end of the month (EOM).

ROG is used primarily when there is a significant gap between the date of the sale and the delivery date. This eliminates the necessity for the buyer to pay for goods before receiving them in order to get a discount.

EOM is used primarily as a convenience, with traditional end-of-month billing practices followed by most companies.

EXAMPLE 8

The last date on which a discount can be taken is shown below.

| | Invoice Date | Goods Received | Terms | Last Day on Which Discount Can Be Taken |
|---------------|-----------------|-------------------|----------------|--|
| Invoice \$500 | October 3 | October 8 | 2/10, n/30 ROG | October 18 |
| Invoice \$700 | October 3 | October 8 | 2/10, n/30 EOM | November 10* |

^{*10} days after the end of the month (EOM).

From the point of view of the seller, the discount is a sales discount; the purchaser would consider it a purchase discount. If a business experiences a large number of sales and purchase discounts, then special columns would be added in the cash receipts and cash disbursements journals, respectively.

Sales Discount appears as a reduction of Sales in the income statement. Purchase Discount appears as a reduction of Purchases in the Cost of Goods section of the income statement.

(B) Return of Merchandise

Many factors in business will cause a return of merchandise: damaged goods, incorrect size or style, or a price not agreed upon. Returns associated with purchases are recorded as purchase returns, and those associated with sales are recorded as sales returns.

Purchase Returns. If a firm has many purchase returns, a purchase returns journal should be used. However, for illustrative purposes, entries for the return of purchases (bought on account) are made here in the general journal:

| | P.R. | Debit | Credit |
|-------------------------------------|------|-------|--------|
| Accounts Payable, Smith and Company | 1/21 | 420 | |
| Purchase Returns | 52 | | 420 |

The debit portion of the entry is posted to the Accounts Payable account in the general ledger (21), and also to the accounts payable subsidiary ledger ($\sqrt{}$) under Smith and Company. Because the controlling account and the customer's account are both debited, a diagonal line is needed in the Post Reference column to show both postings. For items involving a return for cash, the cash receipts journal is used.

Accounts Payable Ledger

General Ledger

| | Smith and | Compan | ıy | | Account | s Payable | 21 | Purchase | Returns | s 52 |
|-----|-----------|--------|-----|-----|---------|-----------|-----|----------|---------|------|
| J-1 | 420 | Bal. | 800 | J-1 | 420 | Bal. | 800 | | J-1 | 420 |

Purchase Returns appears in the income statement as a reduction of Purchases.

Sales Returns. If many transactions occur during the year in which customers return goods bought on account, a special journal known as the sales returns journal is used. However, where sales returns are infrequent, the general journal is sufficient.

The entry to record returns of sales on account in the general journal would be

| | P.R. | Debit | Credit |
|--------------------------------------|------|-------|--------|
| Sales Returns | 42 | 600 | |
| Accounts Receivable, Murphey Company | 12 | | 600 |

The Accounts Receivable account, which is credited, is posted both in the Accounts Receivable controlling account (12) and in the accounts receivable ledger $(\slashed{/})$, under Murphey Company.

Accounts Receivable Ledger

General Ledger

| 1 | Murphey | Compan | ıy | Acc | counts | Receivat | ole 12 | | Sales R | leturns | 42 |
|------|---------|--------|-----|------|--------|----------|--------|-----|---------|---------|----|
| Bal. | 900 | J-1 | 600 | Bal. | 900 | J-1 | 600 | J-1 | 600 | | |
| | 300 | | | 30 | 0 | | | | ' | | |

If the sales returns involve the payment of cash, it will appear in the cash disbursements journal. Sales Returns appears in the income statement as a reduction of Sales Income.

(C) Types of Ledger Account Forms

The T account has been used for most illustrations of accounts thus far. The disadvantage of the T account is that it requires totaling the debit and the credit columns in order to find the balance. If it is necessary to have the balance of a customer's or creditor's account available at any given moment, an alternative form of the ledger, the three-column account, may be used. The advantage of the form is that an extra column, "Balance," is provided, so that the amount the customer owes, or the creditor is owed, is always shown. As each transaction is recorded, the balance is updated. Below is an illustration of an Accounts Receivable ledger account using this form.

A. Lapinsky

| _ | Date | P.R. | Debit | Credit | Balance |
|---|--------|------|-------|--------|---------|
| | Jan. 2 | S-1 | 650 | | 650 |
| | 4 | S-1 | 409 | | 1,059 |
| | 8 | CD-1 | | 500 | 559 |

Summary

| 1. | The journal used to record sales of merchandise on account is known as thejournal. |
|-----|---|
| 2. | The sale of merchandise for cash would appear in the journal. |
| 3. | It is common practice to divide the ledger in a large business into three separate ledgers, known as the,, and ledgers. |
| 4. | The total of the sales journal is posted at the end of the month as a debit to Accounts Receivable and a credit to |
| 5. | The only column in the purchases journal that will not be posted in total at the end of the month is the column. |
| 6. | Sales Discount and Purchase Discount appear in the statement as reductions of Sales and of Purchases, respectively. |
| 7. | Terms of 2/10, n/30 on a \$750 purchase of January 4, paid within the discount period, would provide a discount of \$ |
| 8. | Accounts Receivable and Accounts Payable in the general ledger may be classified as |
| 9. | Merchandise purchased on account would be entered in the journal. |
| 10. | Merchandise sold on account would be entered in the journal. |
| 11. | Merchandise sold for cash would be entered in the journal. |
| 12. | Merchandise purchased for cash would be entered in the journal. |
| 13. | Equipment purchased on account would be entered in the journal. |

Answers: 1. sales; 2. cash receipts; 3. general, accounts receivable, accounts payable; 4. Sales; 5. sundry;, 6. income; 7. 15; 8. controlling accounts; 9. purchases; 10. sales; 11. cash receipts; 12. cash disbursements; 13. purchases.

Solved Problems

- **10.1.** For each of the following transactions, indicate with a check mark the journal in which it should be recorded.
 - (a) Purchase of merchandise on account
 - (b) Purchase of merchandise for cash
 - (c) Receipt of cash from a customer in settlement of an account
 - (d) Cash sales for the month
 - (e) Payment of salaries
 - (f) Sales of merchandise for cash
 - (g) Sales of merchandise on account
 - (h) Cash refunded to customer
 - (i) Sale of a fixed asset for cash
 - (j) Notes payable sent to creditor in settlement of an account

10.2. Listed below are some selected transactions. Enter these transactions in a general journal form.

Mar. 1 Sold merchandise on account, \$2,150 with terms of 2/15, n/30

- 4 Purchased merchandise on account, \$4,150 with terms of 3/10, n/30
- 5 Issued credit memorandum for defective merchandise, \$190
- 7 Paid for merchandise purchased on Mar. 4
- 9 Received credit memorandum for merchandise returned, \$285
- 11 Sold merchandise on account, \$1,640 with terms of 2/10, n/30
- 14 Received payment for Mar. 1 transaction
- 17 Purchased merchandise on account, \$2,178 with terms of 2/10, n/30
- 24 Received full payment from Mar. 11 transaction
- 29 Paid for merchandise from Mar. 17 transaction

|) Cash | 735 | |
|---------------------|-----|-----|
| Sales Discount | 15 | |
| Accounts Receivable | | 750 |
| Cash | 750 | |
| Accounts Receivable | | 750 |

10.12. Assuming that Prob. 10.10 involved cash payments rather than cash receipts, what entries would be needed to record parts (a) and (b)?

| (a) | | |
|-----|--|---|
| | | |
| | | |
| | | |
| (b) | | |
| | | - |

| Accounts Payable | 750 | |
|-------------------|-----|-----|
| Purchase Discount | | 15 |
| Cash | | 735 |
| Accounts Payable | 750 | |
| Cash | | 750 |

10.13. Vane Co. receives an invoice that totals \$189.75, including a shipping charge of \$50. Terms are 3/10, n/60. If the invoice is paid within 9 days of receipt, what is the amount of the payment?

SOLUTION

Total amount – shipping charge = amount for discounting
$$$189.75 - $50 = $139.75$$

Net cost = list price – (list price × discount rate) = $$139.75 - ($139.75 \times 0.03) = $139.75 - $4.19 = 135.56

Total cost = net cost + additional costs = $$135.56 + 50 shipping cost = $$185.56$

10.14. An invoice for \$859.78 dated August 10 offers terms of 2/10 ROG. The shipment of goods arrived on September 29, and the bill was paid on October 8. Find the amount due.

SOLUTION

We must first determine whether the bill was paid within the discount period. Since the terms are ROG (receipt of goods), we use the delivery date as the first day of the discount period.

Since the bill was paid within the discount period, the discount applies.

Net cost = list price
$$\times$$
 complement of discount
= $\$859.78 \times (100\% - 2\%) = \$859.78 \times 0.98 = \$842.58$

10.15. Kim's Fabric Shop received an invoice dated April 8 for \$675, with terms of 5/20 EOM. (a) What is the last date for the discount and (b) what amount is due on that date?

- (a) The last date for the discount is May 20.
- (b) Net cost = list price \times complement of discount = $\$675 \times (100\% - 5\%) = \$675 \times 0.95 = \$641.25$
- 10.16. For each of the following, find the final discount date and the final net invoice date. (Assume that February has 28 days.)

| | Invoice Date | Terms | Delivery Date |
|-----|--------------|----------------|---------------|
| (a) | Jan. 11 | 3/10, n/30 EOM | Feb. 2 |
| (b) | July. 14 | 2/20, n/30 ROG | Sept. 4 |
| (c) | Oct. 4 | 2/10, n/60 | Nov. 1 |

SOLUTION

(a) Final discount date: Feb. 10

Final invoice date:

- 30 Payment period (begins Feb. 1)
- -28 Days in Feb.

Mar. 2

(b) Final discount date:

Sept. 4 Delivery date

Capital and Equity

11.1 INTRODUCTION

Throughout this book, the emphasis has been placed on the capital section of the single (sole) proprietorship's books, with just a mention given to the equity section of the corporation's books and none at all to partnership capital. The first chapter of Schaum's Outline of Accounting II will treat this area at length, but it is important for your understanding of the fundamentals of accounting to introduce this topic at this time.

11.2 SOLE PROPRIETORSHIP

A sole proprietorship is a business owned by one individual. It is a separate business entity, but it is not a separate *legal entity*. The proprietor owns the assets and owes the creditors personally, not as a business, as in the case of a corporation.

The equity of the sole proprietor consists of three accounts: a capital account, a drawing account, and an income summary account. These accounts are described and illustrated below.

Capital account. The proprietor's capital account reflects the changes in his or her equity during the year. Examples 1 through 3 follow the sequence of events in the business of Aaron Baker.

EXAMPLE 1

On January 1, Aaron Baker invested \$10,000 in his business. The entry is as follows:

Jan. 1 Cash

10,000

Aaron Baker, Capital

10,000

Drawing account. Before earnings are made, the proprietor usually has to draw compensation for his living expenses. He is not an employee, and therefore he does not earn a salary; his earnings result from profits of the company. Such drawings reduce his equity and reduce cash.

EXAMPLE 2

Aaron Baker decided that he would withdraw \$500 a month for personal expenses. He expects this equity reduction to be more than offset by earnings, which will be determined at the end of the year. The entry to be made each month is

Aaron Baker, Drawing

500

Cash

500

The account Aaron Baker, Drawing is used to accumulate the details of the drawings so that only one figure, the total, is transferred to the capital account at the end of the year.

When the drawings of \$6,000 for the year are transferred, the entry is as follows:

Dec. 31 Aaron Baker, Capital 6,000 Aron Baker, Drawing 6,000

Income Summary account. When the accounts are summarized and closed, the various expenses are debited in total to Income Summary and the individual expense accounts are credited. The income is credited in total to Income Summary and the individual income accounts are debited. The net difference, a profit or a loss, is transferred to the capital account. The process is treated in Chap. 5 (see, in particular, Sec. 5.3).

EXAMPLE 3

The business of Aaron Baker had income from fees of \$20,000 and expenses of \$9,000. The income of \$20,000, less total expenses of \$9,000, results in net income of \$11,000. The account is closed out and the balance transferred to the capital account with the following entry:

Dec. 31 Income Summary 11,000

Aron Baker, Drawing 11,000

The account Aaron Baker, Capital (see Examples 1 and 2) will now reflect the proprietor's investment, drawings, and income:

| Aaron Baker, Capital | | | | |
|------------------------|--------|-------------------------|--------|--|
| Dec. 31, 19X8 Drawings | 6,000 | Jan. 1, 19X8 Investment | 10,000 | |
| 31, 19X8 Balance | 15,000 | Net Income | 11,000 | |
| | 21,000 | | 21,000 | |
| | | Jan. 1, 19X9 Balance | 15,000 | |

Instead of showing a single capital item on the closing balance sheet, it is preferable to present the opening balance, the increase and decrease for the period, and the closing balance, as shown below.

OWNER'S EQUITY

| Aaron Baker, Capital | | |
|----------------------------|----------|----------|
| Balance, January 1, 19X8 | | \$10,000 |
| Net Income for Year | \$11,000 | |
| Drawings for Year | _6,000 | 5,000 |
| Balance, December 31, 19X8 | | \$15,000 |

11.3 PARTNERSHIP

A partnership, according to the Uniform Partnership Act, is "an association of two or more persons to carry on as co-owners of a business for profit." Such an association should preferably be expressed in a partnership agreement. Profits may be shared equally, according to invested capital, or on any other basis. A partner's share is called his or her *interest* in the business.

The partnership capital accounts consist of a capital account for each partner, a drawing account for each partner, and an income summary account. These accounts are described and illustrated on the following page.

Capital accounts. Like the sole proprietor's account (Example 3), each partner's account reflects the changes in his or her equity during the year.

EXAMPLE 4

On January 1, Joseph Kelso invested \$15,000 and James Murray invested \$10,000 to begin a retail hardware business. The entry is as follows:

| Jan. 1 | Cash | | 25,000 | |
|--------|------|-----------------------|--------|--------|
| | | Joseph Kelso, Capital | | 15,000 |
| | | James Murray, Capital | | 10,000 |

Drawing accounts. The individual drawing accounts will also be similar to the sole proprietor's drawing account.

EXAMPLE 5

It was agreed that Joseph Kelso would draw \$400 a month and James Murray \$300 a month. The entry each month will be as follows:

| Joseph Kelso, Drawing | 400 | |
|-----------------------|-----|-----|
| James Murray, Drawing | 300 | |
| Cash | | 700 |

The monthly amounts will be accumulated in each partner's drawing accounts as in Example 2. At the end of the year, the totals for the year will be transferred to the partners' accounts as follows:

| Dec. 31 | Joseph Kelso, Capital | 4,800 | |
|---------|-----------------------|-------|-------|
| | James Murray, Capital | 3,600 | |
| | Joseph Kelso, Drawing | | 4,800 |
| | James Murray, Drawing | | 3,600 |

Income Summary account. The expense and income accounts are closed into Income Summary as described for a single proprietor (Example 3). However, the profit or loss will be transferred to two or more accounts rather than a single account. The Income Summary, like the drawing accounts, will be closed out for the period.

Partnership profits and losses may be divided in any manner the partners agree upon. In general, a partner may be expected to share in proportion to the amount of capital and/or services he or she contributes. In the absence of a clear agreement, the law provides that all partners share equally, regardless of the differences in time devoted or capital contributed.

Below are outlined the principal methods for profit and loss distribution. For simplicity, the examples are limited to only two partners.

Fixed or capital basis. Profits and losses are generally divided equally, in a fixed ratio, or in a ratio based on the amounts of capital contributed by the partners.

EXAMPLE 6

Perez and Roth have capital balances of \$30,000 and \$20,000, respectively. The net income for the first year of operations was \$15,000. If the partners have decided to share on an equal basis, the journal entry for the allocation of the net income will be

| Income Summary | 15,000 | |
|----------------|--------|-------|
| Perez, Capital | | 7,500 |
| Roth, Capital | | 7,500 |

If, however, capital investment is to be the determining factor, the entry will run as follows:

Interest basis. Under this method, each partner is paid interest on his or her capital investment, and the remaining net income is divided in a fixed ratio or on some other basis. Thus, a partner's share depends partially on his or her capital investment.

EXAMPLE 7

Instead of the equal split as in Example 6, each partner is to receive 6 percent interest on his or her capital balance, with the remaining net income to be shared equally. The entry would be:

| Income Summary | 15,000 | |
|----------------|--------|-------|
| Perez, Capital | | 7,800 |
| Roth, Capital | | 7,200 |

the computation being

| | Perez | Roth | Total |
|------------------------|---------|---------|----------|
| Interest on investment | \$1,800 | \$1,200 | \$ 3,000 |
| Balance | 6,000 | 6,000 | 12,000 |
| Totals | \$7,800 | \$7,200 | \$15,000 |

Salary basis. The partners may agree to give recognition to contributions in the form of services, while the remaining net income may be divided equally or in a fixed ratio.

EXAMPLE 8

Assume that the partnership of Perez and Roth (Example 6) agrees that a yearly salary allowance of \$4,000 be given to Perez and \$3,000 to Roth, the balance to be divided equally. The entry would be

| | Income S | ummary | 15,000 | |
|-----------------------|----------|--------------|---------|----------|
| | Pe | rez, Capital | | 8,000 |
| | Ro | oth, Capital | | 7,000 |
| the computation being | | | | |
| | | Perez | Roth | Total |
| | Salary | \$4,000 | \$3,000 | \$ 7,000 |
| | Balance | 4,000 | 4,000 | 8,000 |
| | Totals | \$8,000 | \$7,000 | \$15,000 |

Salary-plus-interest basis. Here, services rendered to the business and capital contribution jointly determine the income division. Each partner gets a salary and, at the same time, interest on capital. If any balance remains, it is divided in an agreed-upon ratio.

EXAMPLE 9

Perez and Roth (Example 6) decide to allow a credit of 6 percent interest on capital balances, respective salaries of \$4,000 and \$3,000, and equal division of any remainder. The entry would be

| Income Summary | 15,000 | |
|----------------|--------|-------|
| Perez, Capital | | 8,300 |
| Roth, Capital | | 6,700 |

11.4 CORPORATION

Equity Accounting for the Corporation

Accounting for the corporation is distinguished from accounting for the sole proprietorship or the partnership by the treatment of owners' (stockholders') equity, which, in the corporation, is separated into paid-in capital and retained earnings. The reason for this separation is that most states prohibit corporations from paying dividends from other than retained earnings. Paid-in capital is further divided, and so we have two major capital accounts:

Capital stock. Corporate capital stock is evidenced by stock certificates. There are a specified number of shares of stock authorized by the state, generally at a specified par value. No-par stock also can be issued in most states. When stock is issued at a price above par, the amount above par is termed a premium. If stock is issued below par, the difference is termed a discount. If only one type of stock is issued, it may be termed capital stock or, specifically, common stock. Capital stock that has been issued, fully paid, and reacquired by the company, but not canceled, is called treasury stock.

Retained earnings. Retained earnings represent stockholders' equity that has accumulated from profitable operation of the business. Generally they represent total net income less dividends declared. Retained earnings result only from operation of the business; no entries for transactions involving company stock are made to the account. The account is debited for dividends declared and credited for net income for the period. At the end of the year, Income Summary is debited and Retained Earnings credited for net income.

EXAMPLE 10 Operation at a Profit

Assume that on January 1 two separate businesses are formed, a sole proprietorship operated by Ira Sochet and a corporation having four stockholders. Assume further that the single owner invested \$20,000, whereas the four stockholders each bought 500 shares of common stock at \$10 per share. The entries to record the investments are

| Sol | le Proprietorship | | Corporation | | |
|-------------|-------------------|------|--------------|--------|--|
| Cash | 20,000 | Cash | 20,000 | | |
| Ira Sochet, | Capital 20,0 | 00 C | Common Stock | 20,000 | |

After a year's operations, the net income of each enterprise was \$5,000. In the sole proprietorship, the Income Summary balance is transferred to the capital account; in the corporation, the balance is transferred to Retained Earnings. Thus:

| Sole Proprietorship | | | Corporation | | |
|---------------------|-------|-------|-------------------|-------|-------|
| Income Summary | 5,000 | | Income Summary | 5,000 | |
| Ira Sochet, Capital | | 5,000 | Retained Earnings | | 5,000 |

The balance sheets of the two firms are identical except for the owner's equity sections, which appear as follows:

| Sole Proprietors | híp | Corporation | |
|----------------------|----------|--------------------------|----------|
| Ira Sochet, Capital, | | Common Stock, \$10 par | |
| January 1, 19X8 | \$20,000 | (2,000 shares authorized | |
| | | and issued) | \$20,000 |
| Add: Net Income | 5,000 | Retained Earnings | 5,000 |
| Ira Sochet, Capital, | | U | |
| December 31, 19X8 | \$25,000 | Stockholders' Equity | \$25,000 |

EXAMPLE 11 Operation at a Loss

During the second year of operations, both firms in Example 10 lost \$7,000, an amount that exceeds the first year's profits. Observe the difference in the two balance sheets:

| Sole Propi | rietorship | Corporation | |
|--|--------------------|---|----------------------|
| Ira Sochet, Capital January 1, 19X9 | \$25,000 | Common Stock, \$10 par (2,000 shares authorized and issued) | የኃስ ስስስ |
| Deduct: Net Loss Ira Sochet, Capital | (7,000) | Deduct: Deficit | \$20,000 (2,000)* |
| December 31, 19 | X9 <u>\$18,000</u> | Stockholders' Equity | \$18,000 |
| | | | |
| *Retained Ear | rnings | | |
| (19X9) 7,000 5,0 | 000 (19X8) | | |

Summary

| 1. | If there is a credit balance in the Income Summary after closing the accounts, then a(n) has been made for the period. |
|----|--|
| 2. | When the proprietor invests \$10,000 cash in the business, the debit is to Cash and the credit is to |
| 3. | A business operated for profit by two or more co-owners is called a(n) |
| | The price at which the stock of a corporation is selling on the stock exchange is the of the stock. |

| 5. | The | two | principal | sections | of | the | stockholders' | equity | section | are | and |
|----|-----|-----|---------------|----------|----|-----|---------------|--------|---------|-----|---------|
| | | | · | | | | | | | | |

Answers: 1. profit; 2. Capital; 3. partnership; 4. market value; 5. paid-in capital, retained earnings.

Solved Problems

- 11.1 The capital accounts of Allie and Hallie have balances of \$35,000 and \$25,000, respectively. The articles of copartnership refer to the distribution of net income in the following manner:
 - 1. Allie and Hallie are to receive salaries of \$9,000 and \$6,000, respectively.
 - 2. Each is to receive 6 percent on her capital account.
 - 3. The balance is to be divided equally.

If the net income for the firm is 32,000, (a) determine the division of net income and (b) present the entry to close the expense and income summary account.

| (a) | | Allie | Hallie | Total | |
|-----|---------------------|-------|--------|-------|------|
| | Salary | | | | |
| | Interest | | | | |
| | | | | | |
| | Balance | | | | |
| | Share of net income | | | | |
| | | | | | |
| (b) | | | | | |
| | | - | | | |
| | | | | | |

SOLUTION

| | Allie | Hallie | Total | | |
|---------------------|----------|----------|----------|--------|--------|
| Salary | \$ 9,000 | \$ 6,000 | \$15,000 | | |
| Interest | 2,100 | 1,500 | 3,600 | | |
| | \$11,100 | \$ 7,500 | \$18,600 | | |
| Balance | 6,700 | 6,700 | 13,400 | | |
| Share of net income | \$17,800 | \$14,200 | \$32,000 | | |
| | | | | | |
| Income Summary | | | | 32,000 | |
| Allie, Capital | | | | | 17,800 |
| Hallie Capital | | | | | 14 200 |

11.2. Redo Prob. 11.1 for a net income of \$12,000.

| | Allie | Hallie | Total | |
|---------------------|-------|--------|-------|------|
| Salary | | | | |
| Interest | | | | |
| | | | | |
| Balance | | | | |
| Share of net income | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

SOLUTION

| | Allie | Hallie | Total | | |
|---------------------|----------|----------|----------|--------|-------|
| Salary | \$ 9,000 | \$ 6,000 | \$15,000 | | |
| Interest | 2,100 | 1,500 | 3,600 | | |
| | \$11,100 | \$ 7,500 | \$18,600 | | |
| Balance | -3,300 | -3,300 | -6,600 | | |
| Share of net income | \$ 7,800 | \$ 4,200 | \$12,000 | | |
| | ======= | ======= | 5====== | | |
| Income Summary | | | | 12,000 | |
| Allie Capital | | | | | 7,800 |
| Hallie Capital | | | | 1 | 4.200 |

- 11.3. Baggetta and Cohen have capital accounts of \$20,000 and \$40,000, respectively. The partners divide net income in the following manner:
 - 1. Salaries of \$10,000 to Baggetta and \$12,000 to Cohen.
 - 2. Each partner receives 5 percent on his capital investment.
 - 3. The balance is divided in the ratio of 1:2.

Determine the division of net income if net income is (a) \$34,000; (b) \$22,000.

| (a) | | Baggetta | Cohen | Total | | |
|-----|-------------|----------|-------|-------|------|--|
| | Salary | | | | | |
| | Interest | | | | | |
| | | | | | | |
| | Balance | | | | | |
| | Total share | | | | | |
| | | | | | | |
| (b) | | Baggetta | Cohen | Total | | |
| | Salary | | | | | |
| | Interest | | | | | |
| | | | | | | |
| | Balance | | | | | |
| | Total share | | · | | | |
| | | | | | | |

SOLUTION

| (a) | | Baggetta | Cohen | Total | |
|-----|-------------|--|----------|----------|--|
| | Salary | \$10,000 | \$12,000 | \$22,000 | |
| | Interest | 1,000 | 2,000 | 3,000 | |
| | | \$11,000 | \$14,000 | \$25,000 | |
| | Balance | 3,000 | 6,000 | 9,000 | |
| | Total share | \$14,000 | \$20,000 | \$34,000 | |
| | | ====================================== | | | |

Examination III

Chapters 6-11

1. Prepare an eight-column work sheet for the Honest Taxi Company for the month of September. Adjustment data for September 30 are as follows:

| (a) | Supplies on hand | \$1,800 |
|--------------|---------------------------|---------|
| (b) | Expired insurance | 200 |
| (c) | Depreciation on equipment | 350 |
| (<i>d</i>) | Salaries payable | 190 |

Honest Taxi Company Work Sheet Month Ended September 30, 19X8

| | Trial Balance | | Adjustments | | Income Statement | | Balance Sheet | |
|----------------|---------------|--------|-------------|-----|------------------|-----|---------------|-----|
| Account Title | Dr. | Cr. | Dr. | Cr. | Dr. | Cr. | Dr. | Cr. |
| Cash | 2,230 | | | | | | | |
| Supplies | 5,100 | | | | | | | |
| Prepaid Ins. | 600 | | | | | | | |
| Equipment | 15,000 | | | | | | | |
| Accum. Deprec. | | 3,000 | | | | | | |
| Capital | | 19,600 | | | | | | |
| Drawing | 700 | | | | | | | |
| Fares Income | | 3,950 | | | Ĭ | | | |
| Salaries Exp. | 1,400 | | | | | | | |
| Maint. Exp. | 620 | | | | | | | |
| Misc. Exp. | 900 | | | | | | | |
| | 26,550 | 26,550 | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

2. On the basis of Question 1, journalize the closing entries needed.

3. The trial balance of the Harmin Company, before adjustments of December 31, 19X8, includes the following selected accounts:

| Merchandise Inventory | \$160,000 |
|-----------------------|-----------|
| Sales | 840,000 |
| Sales Returns | 40,000 |
| Purchases | 620,000 |
| Transportation-In | 2,000 |

Merchandise inventory on December 31 totals \$135,000.

- (a) Present the income statement, through Gross Profit on Sales, for the Harmin Company.
- (b) Present journal entries necessary to adjust the merchandise inventory at December 31.
- 4. The accounts and the balances appearing in the ledger of the Capo Company, as of December 31, 19X8, are listed below.

| Cash | \$73,200 |
|--------------------------|----------|
| Accounts Receivable | 11,000 |
| Merchandise Inventory | 33,000 |
| Supplies | 3,600 |
| Prepaid Insurance | 1,400 |
| Equipment | 10,000 |
| Accumulated Depreciation | 2,000 |
| Accounts Payable | 8,200 |
| Notes Payable | 6,000 |
| J. Capo, Capital | 22,500 |
| J. Capo, Drawing | 3,000 |
| Sales | 244,000 |
| Sales Returns | 1,200 |
| Purchases | 115,000 |
| Transportation-In | 2,000 |
| Salaries Expense | 18,000 |
| Rent Expense | 4,000 |
| Advertising Expense | 2,600 |
| Maintenance Expense | 3,000 |
| Miscellaneous Expense | 1,700 |
| | |

The data for the year-end adjustments are as follows:

| (a) | Merchandise inventory on December 31 | \$28,600 |
|-----|--------------------------------------|----------|
| (b) | Supplies inventory on December 31 | 1,100 |
| (c) | Insurance expired during the year | 950 |
| (d) | Depreciation for the current year | 750 |
| (e) | Salaries accrued at December 31 | 350 |

Complete the eight-column work sheet below.

Capo Company Work Sheet Month Ended December 31, 19X8

| | | | | | | | | | |

5. The beginning inventory and purchases of product X for the year are given below:

Beginning inventory 7 units @ \$41 each
Purchase, March 10 8 units @ \$43 each
Purchase, July 22 5 units @ \$45 each
Purchase, October 9 5 units @ \$46 each

At the end of the year there were 8 units on hand. Determine the inventory cost by (a) first-in-first-out; (b) last-in-first-out; (c) weighted average.

- **6.** Based on the above problem, determine the cost of goods sold under the first-in-first-out, last-in-first-out, and weighted average methods.
- 7. Based on the data below, determine the inventory cost at March 31 by the retail method.

| | Cost | Retail |
|--------------------------|----------|----------|
| Inventory, March 1 | \$39,700 | \$63,000 |
| Purchases in March (net) | 24,000 | 31,600 |
| Sales for March | | 56,000 |

Receivables and Payables

12.1 INTRODUCTION

A large portion of all business transactions are credit transactions. One way of extending credit is by the acceptance of a *promissory note*, a contract in which one person (the maker) promises to pay another person (the payee) a specific sum of money at a specific time, with or without interest. A promissory note is used for the following reasons:

- The holder of a note can usually obtain money by taking the note to the bank and selling it (discounting the note).
- 2. The note is a written acknowledgement of a debt and is better evidence than an open account. It takes precedence over open accounts in the event that the debtor becomes bankrupt.
- 3. It facilitates the sale of merchandise on long-term or installment plans.

For a note to be negotiable, it must meet the requirements of the Uniform Commercial Code (UCC). The requirements are that the note must

- 1. Be in writing and signed by the maker.
- 2. Contain an order to pay a definite sum of money.
- 3. Be payable to order on demand or at a fixed future time.

12.2 METHODS OF COMPUTING INTEREST

For the sake of simplicity, interest is commonly computed on the basis of a 360-day year divided into 12 months of 30 days each. Two widely used manual methods are (1) the cancellation method and (2) the 6 percent, 60-days method. However, the use of a calculator is certainly the most preferred way.

EXAMPLE 1 The Cancellation Method

The basic formula is

 $Interest = Principal \times Rate \times Time$

Consider a note for \$400 at 6 percent for 90 days. The *principal* is the face amount of the note (\$400). The *rate of interest* is written as a fraction: 6%/100% = 6/100. The *time*, if less than a year, is expressed as a fraction by placing the number of days the note runs over the number of days in a year: 90/360. Thus,

Interest =
$$$400 \times \frac{6}{100} \times \frac{90}{360} = $6$$

EXAMPLE 2 The 6 Percent, 60-Days Method

This is a variation of the cancellation method, based on the fact that 60 days, or 1/6 year, at 6 percent is equivalent to 1 percent, so that the interest is obtained simply by shifting the decimal point of the principal two places to the left. The method also applies to other time periods or other interest rates. For instance:

| | \$400 Note | 30 Days | 6 Per | cent |
|-----|-------------------------------------|-----------------------------|-------|--------|
| (a) | Determine the | interest for 60 days | | \$4.00 |
| (b) | Divide the resu | ılt by 2 (30 days is | | |
| | one-half of 6 | 0 days) | Ans. | \$2.00 |
| | \$400 Note | 45 Days | 6 Per | cent |
| (a) | Determine the interest for 30 days | | | \$2.00 |
| (b) | Determine the interest for 15 days | | | 1.00 |
| (c) | Add the intere | st for 30 days and 15 days | Ans. | \$3.00 |
| | \$400 Note | 60 Days | 5 Per | cent |
| (a) | Determine the interest at 6 percent | | | \$4.00 |
| (b) | Determine the interest at 1 percent | | | |
| | by taking on- | e-sixth of the above amount | | 0.67 |
| (c) | Multiply the in | terest at 1 percent by the | | |
| | rate desired, | 0.67×5 | Ans. | \$3.35 |

Determining Maturity Date

The maturity date is the number of specified days after the note has been issued and may be determined by

- 1. Subtracting the date of the note from the number of days in the month in which it was written.
- 2. Adding the number of days in each of the succeeding full months, stopping with the last full month before the number of days in the note are exceeded.
- 3. Subtracting the total days of the result of steps 1 and 2 above from the time of the note. The resulting number is the due date in the upcoming month.

EXAMPLE 3

The maturity date of a 90-day note dated April 4 would be computed as follows:

| Period of note | | | 90 |
|----------------|----|-----------|----|
| April | 30 | | |
| Date of note | 4 | 26 | |
| May | | 31 | |
| June | | <u>30</u> | |
| Total | | | 87 |
| Maturity date | | July | _3 |

If the due date of a note is expressed in months, the maturity date can be determined by counting that number of expressed months from the date of writing.

EXAMPLE 4

A 5-month note dated March 17 would be due for payment on August 17. A 1-month note dated March 31 would mature on April 30.

12.3 ACCOUNTING FOR NOTES

(A) Notes Payable

A promissory note is a note payable from the standpoint of the maker, whereas it is a note receivable from the standpoint of the payee.

A note payable is a written promise to pay a creditor an amount of money in the future. Notes are used by a business to

- 1. Make purchases
- 2. Settle an open account
- 3. Borrow money from a bank

Make Purchases

EXAMPLE 5

Assume that you, as the owner, bought office equipment costing \$2,000 by giving a note.

| Office Equipment | 2,000 | |
|------------------|-------|-------|
| Notes Payable | | 2,000 |

Settle an Open Account

EXAMPLE 6

There are times when a note is issued in settlement of an account payable. Assume that the Johnson Agency bought merchandise from Shambley Corporation for \$500, terms 2/10, n/30. The entry would be recorded in the purchases journal and would appear in the general ledger as

| Purchases | | Accounts Payable | |
|-----------|--|------------------|-----|
| 500 | | | 500 |

However, 30 days later, the agency is unable to pay and gives to Shambley Corporation a 60-day, 6 percent note for \$500 to replace its open account. When the Johnson Agency issues the note payable, an entry is made in the general journal that will decrease the accounts payable and increase the notes payable.

| Accounts Payable | 500 | |
|------------------|---------------|--|
| Notes Payable | 500 | |
| Accounts Payable | Notes Payable | |
| 500 500 | 500 | |

Note that the Johnson Agency still owes the debt to Shambley Corporation. However, it now becomes a different form of obligation, as it is a written, signed promise in the form of a note payable.

EXAMPLE 7

When the maker pays the note in 60 days at 6 percent, the amount of the payment will be the total of the principal and interest and will be recorded in the cash disbursements journal.

| Notes Payable | 500 | |
|------------------|-----|-----|
| Interest Expense | 5 | |
| Cash | | 505 |

Borrow Money from a Bank. On occasion, businesses find that it is necessary to borrow money by giving a note payable to a bank. Frequently, banks require the interest to be paid in advance. This is accomplished by deducting the amount of the interest from the principal when the loan is made and is known as *discounting a note payable*. The proceeds will be the amount of money the maker of the note receives after the discount has been taken from the principal.

EXAMPLE 8

Assume that the Rhulen Agency seeks to borrow \$3,000 for 60 days at 12 percent from the Commercial National Bank. The bank will deduct the interest (\$60.00) from the \$3.000 principal and will give the difference of \$2,940 (proceeds) to the Rhulen Agency.

The entry recorded in the cash receipts journal is

| Cash | 2,940 | |
|------------------|-------|-------|
| Interest Expense | 60 | |
| Notes Pavable | | 3.000 |

Sixty days after the issuance of the instrument, the note becomes due, and the Rhulen Agency sends a check for the face value of the note (\$3,000). Because the interest was deducted immediately when the loan was made, no further interest will be paid at that time. The entry to record the payment of the note will be made in the cash payments journal.

| Notes Payable | 3,000 | |
|---------------|-------|-------|
| Cash | | 3,000 |

Note: When a business issues many notes payable, a special subsidiary book, known as the notes payable register, may be used. This register will give the complete data for all notes issued and paid by the business. It must be noted, however, that this is merely a source of information and not a journal, as no postings to the ledger are made from it.

(B) Notes Receivable

A note received from a customer is an asset because it becomes a claim against the buyer for the amount due.

EXAMPLE 9

Assume that Howard Cogan owes David Rasnich \$400 and gives him a 90-day, 12 percent note in settlement. Mr. Cogan still owes the debt, but his obligation is now of a different type. On Mr. Rasnich's books the entry is

Notes Receivable 400
Accounts Receivable 400

Only the principal (\$400) is recorded when the note is received, since it represents the amount of the unpaid account. The interest is not due until the date of collection, 90 days later. At that time, the interest earned (income) will be part of the entry recognizing the receipt of the proceeds from the note:

| Cash | | 412 | |
|------|------------------|-----|-----|
| | Notes Receivable | | 400 |
| | Interest Income | | 12 |

(C) Drafts

Sometimes drafts rather than promissory notes are used in settlement of a business obligation. A draft is an order by the seller (drawer) to the buyer (drawee) stating that the buyer must pay a certain amount of money to a third party (payee).

EXAMPLE 10

If the seller is not acquainted with the buyer, he or she may draw a draft on the buyer and attach to it a bill of lading for the purchase. (A bill of lading is prepared by the transportation company.) The draft and bill of lading are sent to the bank, at which time the bank presents the documents to the buyer. When the buyer pays the amount of the draft to the bank, he or she receives the bill of lading and obtains the purchase from the transportation company. The bank forwards the amount collected to the seller, deducting from it a service charge.

12.4 DISCOUNTING

The negotiability of a note receivable enables the holder to receive cash from the bank before the due date. This is known as *discounting*.

Once the interest to be paid has been determined, the procedure for discounting a note is quite simple. The maturity value of a note is

where the face is the principal and the interest income is computed as in Sec. 12.2. The holder of a note may discount it at the bank prior to its due date. He will receive the maturity value less the discount, or interest charge imposed by the bank for holding the note for the unexpired portion of its term. In other words,

and

EXAMPLE 11

Mr. Rasnich holds a \$400, 90-day, 12 percent note written by Howard Cogan on April 10 (see Example 9). It is discounted at 12 percent on May 10. The interest on the note amounts to \$12. Hence,

(1) Maturity value =
$$$400 + $12 = $412$$

Since, at the time of discounting, Mr. Rasnich has held the note for only 30 days, the bank will have to wait 90 - 30 = 60 days until it can receive the maturity value. The discount charge is then

(2) Discount =
$$\$412 \times \frac{12}{100} \times \frac{60}{360} = \$8.24$$

and Mr. Rasnich receives

(3) Net proceeds =
$$$412 - $8.24 = $403.76$$

In this example the bank's discount rate happened to be equal to the interest rate of the note; this need not always be the case (see Prob. 12.12).

12.5 DISHONORED NOTES RECEIVABLE

If the issuer of a note does not make payment on the due date, the note is said to be dishonored. It is no longer negotiable, and the amount is charged back to Accounts Receivable. The reasons for transferring the dishonored notes receivable to the Accounts Receivable accounts are: (1) the Notes Receivable account is then limited to current notes that have not yet matured; and (2) the Accounts Receivable account will then show the dishonoring of the note, giving a better picture of the transaction.

EXAMPLE 12

A \$500, 60-day, 12 percent note written by F. Saltzman was dishonored on the date of maturity. The entry is

| Accounts Receivable, F. Saltzman | 510 | |
|----------------------------------|-----|-----|
| Notes Receivable | | 500 |
| Interest Income | | 10 |

Observe that the interest income is recorded and is charged to the customer's account.

When a payee discounts a note receivable, he or she creates a contingent (potential) liability. This occurs because there is a possibility that the maker may dishonor the note. Bear in mind that the payee has already received payment from the bank in advance of the maturity date. He or she is, therefore, contingently liable to the bank to make good on the amount (maturity value) in the event of default by the maker. Any protest fee arising from the default of the note is charged to the maker of the note and is added to the amount to be charged against his or her account.

EXAMPLE 13

In Example 11, assume that Howard Cogan dishonored the note when due. The entry for Mr. Rasnich would be

| Accounts Receivable | | 412* | |
|---------------------|------------------|------|-----|
| | Cash | | 412 |
| *\$400 | (face) | | |
| 12 | (interest) | | |
| \$412 | (maturity value) | | |

Had the bank issued a protest fee of \$15, the amount charged to the customer would be \$427.

12.6 UNCOLLECTIBLE ACCOUNTS

(A) Recording

Businesses must expect to sustain some losses from uncollectible accounts and should therefore show on the balance sheet the *net amount of accounts receivable*, the amount expected to be collected, rather than the gross amount. The difference between the gross and net amounts represents the estimated uncollectible accounts, or bad debts. These expenses are attributed to the year in which the sale is made, though they may be realized at a later date.

There are two methods of recording uncollectible accounts, the direct write-off method and the allowance method.

Direct Write-Off Method. In small businesses, losses that arise from uncollectible accounts are recognized in the accounts in the period in which they become uncollectible. Under this method, when an account is deemed uncollectible, it is written off the books by a debit to the expense account, Uncollectible Accounts Expense, and a credit to the individual customer's account and to the controlling account.

EXAMPLE 14

If William Anderson's \$300 account receivable, dated May 15, 19X7, was deemed uncollectible in January of 19X8, the entry in 19X8 would be

| Uncollectible Accounts Expense | 300 | |
|---------------------------------------|-----|-----|
| Accounts Receivable, William Anderson | | 300 |

Allowance Method. As has been stated before, one of the fundamentals of accounting is that revenue be matched with expenses in the same year. Under the direct write-off method, in Example 14, the loss was not recorded until a year after the revenue had been recognized. The allowance method does not permit this. The income statement for each period must include all losses and expenses related to the income earned in that period. Therefore, losses from uncollectible accounts should be deducted in the year in which the sale was made. Since it is impossible to predict which particular accounts will not be collected, an adjusting entry is made, usually at the end of the year.

EXAMPLE 15

Assume that in the first year of operation, a firm has estimated that \$2,000 of accounts receivable will be uncollectible. The adjusting entry would be

| Uncollectible Accounts Expense | 2,000 | |
|--------------------------------------|-------|-------|
| Allowance for Uncollectible Accounts | | 2,000 |

The credit balance of Allowance for Uncollectible Accounts (contra asset) appears on the balance sheet as a deduction from the total amount of Accounts Receivable:

| Accounts Receivable | \$29,920 | |
|--|----------|----------|
| Less: Allowance for Uncollectible Accounts | 2.000 | \$27.920 |

The \$27,920 will become the estimated realizable value of the accounts receivable at that date. The uncollectible accounts expense will appear as an operating expense in the income statement.

(B) Computation

There are two generally accepted methods of calculating the amount of uncollectible accounts. One method is to use a flat percentage of the net sales for the year. The other method takes into consideration the ages of the individual accounts at the end of the fiscal year.

Percentage of Sales Method. Under the percentage of sales method, a fixed percentage of the total sales on account is taken. For example, if charge sales were \$200,000 and experience has shown that approximately 1 percent of such sales will become uncollectible at a future date, the adjusting entry for the uncollectible accounts would be

Uncollectible Accounts Expense 2,000
Allowance for Uncollectible Accounts 2,000

The same amount is used whether or not there is a balance in Allowance for Uncollectible Accounts. However, if any substantial balance should accumulate in the allowance account, a change in the percentage figure would become appropriate.

Balance Sheet Method. Under the balance sheet method, every account is "aged"; that is, each item in the balance is related to its sale date. The further past due the account, the more probable it is that the customer is unwilling or unable to pay. A typical analysis is shown in Example 16.

EXAMPLE 16

| Age of Account | Accounts Receivable Balance | Estimated Percent Uncollectible | Amount |
|----------------|--------------------------------|---------------------------------|---------|
| 1-30 days | \$ 8,000 | 1% | \$ 80 |
| 31-60 days | 12,000 | 3% | 360 |
| 61-90 days | 6,000 | 5% | 300 |
| 91~180 days | 3,000 | 20% | 600 |
| Over 180 days | 920 | 50% | 460 |
| | \$29,920 | | \$1,800 |

The calculated allowance for uncollectible accounts (\$1,800 in Example 16) is reconciled at the end of the year with the actual balance in the allowance account, and an adjusting entry is made. The amount of the adjusting entry must take into consideration the balance of the Allowance for Uncollectible Accounts. The percentage of sales method does not follow this procedure.

EXAMPLE 17

The analysis showed that \$1,800 would be required in the Allowance for Uncollectible Accounts at the end of the period. The Allowance for Uncollectible Accounts has a credit balance of \$200. The adjusting entry at the end of the year would be

Uncollectible Accounts Expense 1,600*
Allowance for Uncollectible Accounts 1,600

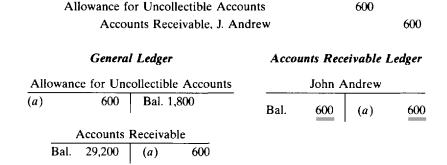

*(\$1,800 - \$200)

If, however, there had been a debit balance of \$200, a credit to Allowance for Uncollectible Accounts of \$2,000 would be necessary to bring the closing balance to \$1,800.

When it becomes evident that a customer's account is uncollectible, it is written off the books. This is done by crediting Accounts Receivable (the individual customer's account in the subsidiary ledger) for the amount deemed uncollectible and debiting Allowance for Uncollectible Accounts. Note that there is no expense at this time, as it was already estimated in the previous year.

EXAMPLE 18

John Andrew's account (a) was deemed uncollectible.

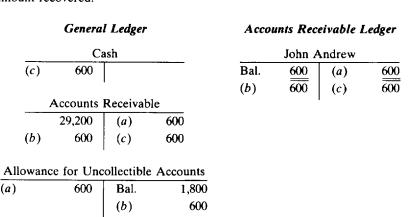

12.7 RECOVERY OF BAD DEBTS

If a written-off account is later collected in full or in part (a recovery of bad debts), the write-off will be reversed for the amount received.

EXAMPLE 19

At a later date, Mr. Andrew (see Example 18) pays his account in full. The reversing entry (b) to restore his account will be

A separate entry, (c), will then be made in the cash receipts journal to record the collection, debiting Cash \$600 and crediting Accounts Receivable, John Andrew. If a partial collection was made, the reversing entry should be made for the amount recovered.

Summary

| Notes Payable | 5,000 | - |
| Interest Expense | 150 | |
| Cash | | 5,150 |

12.4. Below is an example of a note receivable.

July 1, 19X8

I, Charles Babcock, promise to pay Acme Stores \$800, 60 days from date, at 15% interest.

Charles Babcock

(a) Who is the maker of the note? (b) Who is the payee of the note? (c) What is the maturity date of the note? (d) What is the maturity value of the note?

SOLUTION

- (a) Charles Babcock
- (b) Acme Stores
- (c) August 30
- (d) \$820
- 12.5. A note written on August 1 and due on November 15 was discounted on October 15. (a) For how many days was the note written? (b) For how many days did the bank charge in discounting the note?

SOLUTION

| (a) | August 1-31 | 30 days |
|-----|---------------|----------|
| | September | 30 days |
| | October | 31 days |
| | November | 15 days |
| | | 106 days |
| (b) | October 15-31 | 16 days |
| | November 1-15 | 15 days |
| | | 31 days |

12.6. Determine the interest on the following notes: (a) \$750 principal, 6 percent interest, 96 days; (b) \$800 principal, 9 percent interest, 90 days. Use the 60-day, 6% method.

SOLUTION

The interest at 9% is then

$$\frac{9\%}{6\%} \times \$12.00 = \underline{\$18.00}$$

12.7. On July 10, Jay Company issued a 60-day, 12.5 percent note for \$6,000. Determine (a) the due date, (b) the interest, (c) the maturity value.

SOLUTION

(b)
$$\$6,000 \times 12.5\% \times \frac{60}{360} = \$125$$

12.8. Below is a list of notes payable from the books of March Company. Determine (a) the due date, (b) the interest, (c) the maturity value for each note (not a leap year). As you can see, a calculator is your best accounting tool for mathematics.

| | Date Issued | Principal | Rate | Time, Days | Due Date | Interest | Maturity Value |
|------|----------------|-----------|--------|---------------|-------------|----------|-------------------|
| (1) | Jan. 10 | \$ 4,200 | 12.5% | 60 | | | |
| (2) | Feb. 12 | 7,900 | 14% | 30 | | | |
| (3) | Mar. 15 | 6,000 | 12.75% | 90 | | | |
| (4) | Apr. 10 | 3,800 | 14.50% | 120 | | | |
| (5) | June 17 | 2,800 | 13.25% | 30 | | | |
| (6) | July 15 | 7,000 | 12.75% | 60 | | | |
| (7) | Aug. 21 | 7,000 | 12.50% | 60 | | | |
| (8) | Sept. 11 | 10,000 | 14% | 90 | | | |
| (9) | Oct. 30 | 2,000 | 13.5% | 60 | | | |
| (10) | Nov. 2 | 2,500 | 12% | 30 | | | |

| | Due Date | Interest | Maturity Value |
|------|----------|----------|----------------|
| (1) | Mar. 11 | \$ 87.50 | \$ 4,287.50 |
| (2) | Mar. 14 | 92.17 | 7,992.17 |
| (3) | June 13 | 191.25 | 6,191.25 |
| (4) | Aug. 8 | 183.67 | 3,983.67 |
| (5) | July 17 | 30.92 | 2,830.92 |
| (6) | Sept. 13 | 148.75 | 7,148.75 |
| (7) | Oct. 20 | 145.83 | 7,145.83 |
| (8) | Dec. 10 | 350.00 | 10,350.00 |
| (9) | Dec. 29 | 45.00 | 2,045.00 |
| (10) | Dec. 2 | 25.00 | 2,525.00 |

- 12.9. From the following information, prepare the necessary journal entries.
 - 1. On June 10, received a 30-day, 12 percent, \$5,000 note dated June 9 from Price Rite in settlement of his account.
 - 2. July 9, received payment from Price Rite on note.

| | - |

Cash and Its Control

13.1 INTRODUCTION

In most firms transactions involving the receipt and disbursement of cash far outnumber any other kinds of transactions. Cash is, moreover, the most liquid asset and the most subject to theft and fraud. It thus becomes essential to have a system of accounting procedures and records that will maintain adequate control over cash.

13.2 CLASSIFICATION OF CASH

Roughly speaking, cash is anything that a bank will accept for deposit and will credit to the depositor's account. More precisely:

- 1. Cash is a medium of exchange. Thus, such items as currency, coin, demand deposits, savings deposits, petty cash funds, bank drafts, cashier's checks, personal checks, and money orders qualify as cash. There are other items that are usually under the control of the company cashier that are not cash, such as postage stamps, postdated checks, and IOUs. Postage is a prepaid expense; postdated checks are receivables; and IOUs are receivables or prepaid expenses, depending on whether they are to be collected or applied against employee expenses.
- 2. Cash is immediately available for payment of current debts. Certificates of deposit (CDs) are temporary investments rather than cash, since they cannot be immediately withdrawn. (Technically, savings accounts may not be withdrawn without notice to the bank, but generally this requirement is not enforced; hence, savings deposits were listed above as cash.) Likewise, a sinking fund specifically established to pay bond requirements or a deposit with a manufacturer for purchase of equipment is not available to pay other current obligations and, therefore, is not cash. Such items are generally shown on the balance sheet as noncurrent assets, whereas cash is listed as a current asset.

13.3 CONTROLLING CASH

(A) Cash Receipts

In a very small business the owner-manager can maintain control through personal contact and supervision. This kind of direct intervention must, in a firm of any size, be replaced by a system of internal control, namely, the separation of duties. No person assigned to handle cash should, at the same time, be in a position to make entries in the records affecting his or her own activities.

The specific controls applied to cash receipts may be summarized as

- 1. All receipts should be banked promptly.
- 2. Receipts from cash sales should be supported by sales tickets, cash register tapes, etc.
- 3. Accountability should be established each time cash is transferred.
- Persons receiving cash should not make disbursements of cash, record cash transactions, or reconcile bank accounts.

(B) Cash Disbursements

The main ideas here are that payments should be made only by properly authorized persons, that equivalent value be received, and that documents adequately support the payment. Following are specific internal controls relating to cash disbursements.

- 1. All disbursements, except petty cash payments, should be made by prenumbered check.
- 2. Vouchers and supporting documents should be submitted for review when checks are signed.
- 3. Persons who sign checks should not have access to cash receipts, should not have a custody of funds or record cash entries, and should not reconcile bank accounts.

It is seen that special procedures will be needed for petty cash; these will be treated in Sec. 13.6.

(C) Cash Balances

The basic principle of separation of duties is evident in the specific controls for cash balances:

- 1. Bank reconciliations should be prepared by persons who do not receive cash or sign checks.
- Bank statements and paid checks should be received unopened by the person reconciling the account.
- 3. All cash funds on hand should be closely watched and surprise counts made at intervals.

If the requirement that all cash receipts be banked is followed, then it is clear that the monthly bank statement can be made a powerful control over cash balances. Hence the importance of reconciling bank balances.

13.4 BANK STATEMENTS

Checks

A business opens a checking account to gain the privilege of placing its deposits in a safe place and also to be able to write checks. When an account is opened, each person who is authorized to write checks on that account must sign a signature card. The bank keeps the signature card on file and compares it when checks are submitted. A check is a written notice by the depositor directing the bank to deduct a specific sum of money from the checking account and to pay that amount to the person or company written on the check. A check involves three parties:

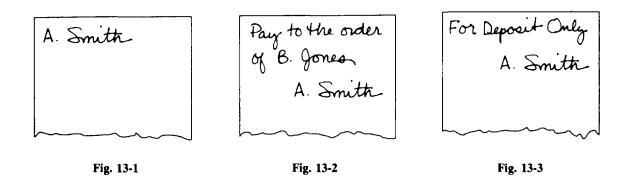

- 1. Drawer: the one who writes the check
- 2. Drawee: the bank on which the check is drawn
- 3. Payee: the person or company to whom the check is to be paid

Checks offer several advantages. The checkbook stubs provide a record of the cash paid out, while the canceled checks provide proof that money has been paid to the person legally entitled to it. Also, the use of checks is the most convenient way of paying bills, because checks can safely be sent through the mail. If a check is lost or stolen, the depositors can request the bank not to pay (a stop order).

Endorsements

When a check is given to the bank for deposit, the depositor signs the check on the back to show that he or she accepts responsibility for the amount of that check. The depositor's signature is known as an *endorsement*. This endorsement transfers the ownership of the check and guarantees to the individual that the depositor will guarantee its payment. Different kinds of endorsements serve different needs.

- 1. **Blank endorsement.** This is an endorsement that consists only of the name of the endorser. Its disadvantage lies in the fact that a lost or stolen check with a blank endorsement may be cashed by the finder or thief. Therefore, this type of endorsement should not be used unless the depositor is at the bank already to make a deposit (Fig. 13-1).
- 2. **Endorsement in full.** This type of endorsement states that the check can be cashed or transferred only on the order of the person named in the endorsement (Fig. 13-2).
- 3. **Restrictive endorsement.** This type of endorsement limits the receiver of the check as to the use he or she can make of the funds collected. Usually this type of endorsement is done when checks are prepared for deposit (Fig. 13-3).

13.5 RECONCILING THE BANK BALANCE

Each month, generally, the bank forwards to the depositor a statement of his or her account showing:

- 1. Beginning balance
- 2. Deposits made and other credits
- 3. Checks paid and other charges (debits)
- 4. Ending balance

Included in the envelope with the statement are the paid, or "canceled," checks and any other deductions (debit memorandum) or additions (credit memorandum) to the account. A deduction may be a debit memorandum for bank service charges; an addition may be a credit memorandum for the proceeds of a note collected by the bank for the depositor.

Usually the balance of the bank statement and the balance of the depositor's account will not agree. To prove the accuracy of both records, the reconciling differences have to be found and any necessary entries made. The reconciling items will fall into two broad groups: (1) those on the depositor's books but not recorded by the bank, and (2) those on the bank statement but not on the depositor's books. The statement used to reconcile this difference is known as the bank reconciliation statement.

Items on Books but Not on Bank Statement

Deposits in transit. These are cash receipts recorded by a company but too late to be deposited. The total of such deposits is to be *added* to the bank balance.

Outstanding check. These are checks issued by the depositor but not yet presented to the bank for payment. The total of these checks is to be *deducted* from the bank balance.

Errors. Errors may be made in recording amounts of checks, for example, a transposition of figures. The item should be added to the bank balance if it was overstated and deducted if understated.

Items on Bank Statement but Not on Books

Service charges. The bank generally deducts amounts for bank services. The exact amount is usually not known by the depositor until he or she receives the statement. The amount should be deducted from the book balance.

NSF (not sufficient funds) checks. These are checks that have been deposited but cannot be collected because of insufficient funds in the account of the drawer of the check. The bank then issues a debit memorandum charging the depositor's account. The amount should be deducted from the book balance.

Collections. The bank collects notes and other items for a small fee. The bank then adds the proceeds to the account and issues a credit memorandum to the depositor. Often there are unrecorded amounts at the end of the month. These amounts should be added to the book balance.

Errors. Journal entries should be made for any adjustments to the book accounts. Bank errors should not be entered on the books. They should be brought to the attention of the bank and corrected by the bank.

EXAMPLE 1

The following information was available when the John Hennessey Company began to reconcile its bank balance on May 31, 19X8: balance per depositor's books, \$1,638; balance per bank statement, \$2,420; deposit in transit, \$150; checks outstanding—#650, \$300 and #654, \$240; collection of \$400 note plus interest of \$8; collection fee for note, \$10; bank service charge, \$6.

John Hennessey Company

| | | onciliation I, 19X8 | | |
|-------------------------|---------|------------------------|-------|---------|
| Balance per bank | \$2,420 | Balance per checkbook | | \$1,638 |
| Add: Deposit in transit | 150 | Add: Notes receivable | \$400 | |
| | \$2,570 | Interest income | 8 | 408 |
| | | | | \$2,046 |
| Less: | | Less: | | |
| Outstanding checks | | Collection fee | \$10 | |
| #650 \$300 | | Service charge | 6 | 16 |
| #654 | 540 | | | |
| Adjusted balance | \$2,030 | Adjusted balance | | \$2,030 |

Only reconciling items in the depositor's section (right side) are to be recorded on the books. The reconciling items in the bank section (left side) have already been recorded on the books and merely have not yet reached the bank. They will normally be included in the next bank statement.

To complete the reconcilement, the following two journal entries will be needed.

| Entry 1 | Cash | | 408 | |
|---------|------|------------------|-----|-----|
| | | Notes Receivable | | 400 |
| | | Interest Income | | 8 |
| Entry 2 | Bank | Service Expense | 16 | |
| | | Cash | | 16 |

13.6 PETTY CASH

Funds spent through the cash disbursements journal take the form of checks issued in payment of various liabilities. In addition, a business will have many expenditures of small amounts for which it is not practical to issue checks. Examples are postage, delivery expense, supplies, and miscellaneous small items, which are paid for in cash through a petty cash fund.

Under the so-called *imprest system*, a fund is established for a fixed petty cash amount, which is periodically reimbursed by a single check for amounts expended. The steps in setting up and maintaining the petty cash fund are as follows:

1. An estimate is made of the total of the small amounts likely to be disbursed over a short period, usually a month. A check is drawn for the estimated total and put into the fund. The only time an entry is made in the Petty Cash account is for the initial establishment of the fund, unless at some later time it is determined that this fund must be increased or decreased.

EXAMPLE 2

A petty cash fund of \$40 has been established.

2. The individual in charge of petty cash usually keeps the money in a locked box along with petty cash vouchers, such as illustrated below. The petty cash voucher, when signed by the recipient, acts as a receipt and provides information concerning the transaction. As each payment is made, the voucher is entered in the petty cash record and placed with the balance of the money in the petty cash box.

Petty Cash Voucher

| No | Date |
|-------------|------|
| Paid To | |
| Reason | |
| Received By | |

EXAMPLE 3

Petty Cash Record

| Date | Explanation | Voucher | Receipts | Payments | Postage | Del. | Sundry |
|--------|---------------------|---------|----------|----------|---------|--------|---------|
| Jan. 1 | Established | | \$40.00 | | | | |
| 2 | Postage on Sales | 1 | | \$ 4.50 | \$ 4.50 | | |
| 4 | Telegram | 2 | | 4.00 | 4.00 | | |
| 8 | Taxi Fare | 3 | | 5.00 | | \$5.00 | |
| 10 | Coffee for Overtime | 4 | | 2.00 | | | \$ 2.00 |
| 15 | Stamps | 5 | | 8.00 | 8.00 | | |
| 26 | Cleaning Windows | 6 | | 8.00 | | | 8.00 |
| | | | \$40.00 | \$31.50 | \$16.50 | \$5.00 | \$10.00 |
| | Bal. | | | 8.50 | | ===== | |
| | | | \$40.00 | \$40.00 | | | |
| Feb. 1 | Bal. | | \$ 8.50 | | | | |
| | Replenished Fund | | 31.50 | | | | |

EXAMPLE 4

The petty cash fund established in Example 2 might yield the following entries for the first month:

| Postage Expense | 16.50 | |
|-------------------------------|-------|-------|
| Delivery Expense | 5.00 | |
| Miscellaneous General Expense | 10.00 | |
| Cash | | 31.50 |

3. Proof of petty cash is obtained by counting the currency and adding the amounts of all the vouchers in the cash box. The total should agree with the amount in the ledger for the petty cash fund. If it does not, the entry in the cash disbursements journal recording the reimbursement of the petty cash fund will have to include an account known as Cash Short and Over. A cash shortage is debited and a cash overage is credited to this account. Cash Short and Over is closed out at the end of the year into the Income Summary account and is treated as a general expense (if a debit balance) or miscellaneous income (if a credit balance).

EXAMPLE 5

If in Example 4 the amount of cash remaining was not \$8.50 but \$6.50, the \$2.00 difference would be considered to be short. The entry would then become

| Postage Expense | 16.50 | |
|-------------------------------|-------|-------|
| Delivery Expense | 5.00 | |
| Miscellaneous General Expense | 10.00 | |
| Cash Short and Over | 2.00 | |
| Cash | | 33.50 |

Summary

| 1. | The most liquid asset and also the one most subject to theft and fraud is |
|-----|---|
| 2. | All disbursements, except petty cash payments, should be made by |
| 3. | A written notice by a depositor instructing his or her bank to deduct a specific sum from his or her account and to pay it to the person assigned is known as a(n) |
| 4. | A check involves three parties: the, who writes the check; the, the bank on which it is drawn; and the, the person to whom it is to be paid. |
| 5. | The signature on the back of a check showing that the individual accepts responsibility for that amount is known as $a(n)$ |
| 6. | The endorsement poses the greatest potential loss in the event of a lost or stolen check. |
| 7. | A bank service charge is evidenced by a(n) |
| 8. | A check that has been deposited but cannot be collected because of insufficient funds is labeled by the bank and is deducted from the balance. |
| 9. | Under the, a fund is established for a fixed petty cash amount, which is reimbursed by a single check for amounts expended. |
| 10. | For small differences in the petty cash account, a(n) account is generally used. |
| | wers: 1. cash; 2. prenumbered check; 3. check; 4. drawer, drawee, payee; 5. endorsement; 6. blank; 7. debit norandum; 8. NSF, book; 9. imprest system; 10. Cash Short and Over. |

Solved Problems

13.1. Name five sources of cash receipts.

SOLUTION

The following list contains the principal sources (any five sources could be named):

- 1. Sales of goods and services for cash
- 2. Collections of accounts and notes from customers
- 3. Renting of property
- 4. Loans from individuals
- 5. Loans from banks
- 6. Customers' notes discounted
- 7. New bonds issued

- 8. New capital stock issued
- 9. Sale of scrap, waste, and by-products
- 10. Disposal of equipment
- 11. Sale of other assets
- 13.2. Name five types of cash disbursements.

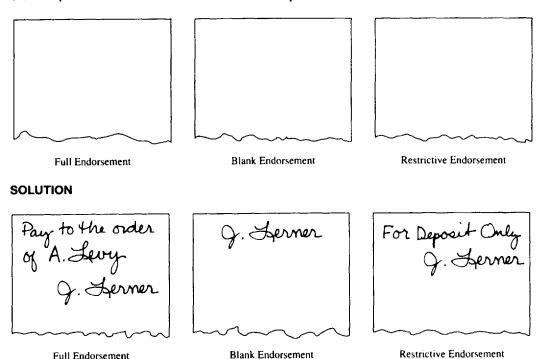

Any five of the following types could be named:

- 1. Purchase of goods
- 2. Purchase of supplies
- 3. Payment of wages and salaries
- 4. Purchase of equipment
- 5. Payment of other operating expenses
- 6. Purchase of securities
- 7. Retirement of bank loans
- 8. Retirement of stocks and bonds
- 9. Miscellaneous payments (dividend payments, etc.)
- 13.3. Answer the following questions about the check shown below. (a) Who is the drawer? (b) Who is the drawee? (c) Who is the payee?

| | No. 136 |
|---|------------------|
| De | cember 25, 19 XB |
| Pay to the Order of Jason Sloane Swenty-five and % | s 75°% |
| 0 0 | O Dollars |
| WHITESIDE COUNTY BANK Rock Falls, Illinois 61071 | B. Smith |
| WHITESIDE COUNTY BANK | B. Smith |

- (a) B. Smith
- (b) Whiteside County Bank
- (c) Jason Sloane

- 13.4. (a) Assume that J. Lerner, banking at 1st City Bank, wishes a full endorsement for A. Levy. Prepare a full endorsement.
 - (b) Prepare a blank endorsement.
 - (c) Prepare a restrictive endorsement for a deposit.

- **13.5.** For items 1 to 8 below, in order to produce equal adjusted balances for Blake Company, indicate whether they should be
 - (a) Added to the bank statement balance
 - (b) Deducted from the bank statement balance
 - (c) Added to the depositor's balance
 - (d) Deducted from the depositor's balance
 - (e) Exempted from the bank reconciliation statement
 - 1. Statement includes a credit memorandum, \$402, representing the collection of the proceeds of a note left at the bank.
 - 2. Statement includes a credit memorandum representing the proceeds of a loan, \$4,200, made to Blake Company by the bank.
 - 3. Deposits in transit totaled \$3,000.
 - 4. Seven outstanding checks totaling \$9,000 were not recorded on the statement.
 - 5. A \$150 customer's check that Blake Company had deposited was returned with "not sufficient funds" stamped across the face.
 - 6. The bank erroneously charged someone else's check for \$200 against Blake's account.
 - 7. Blake Company was incorrectly credited with the deposit of \$240 made by another depositor.
 - 8. A \$96 check was erroneously recorded in Blake's check stubs as \$69.

- 1. (c) 5. (d)
- 2. (c) 6. (a)
- 3. (a) 7. (b)
- 4. (b) 8. (d)
- **13.6.** Of the following transactions involving the bank reconciliation statement, which ones necessitate an adjusting entry on the depositor's books? Prepare the necessary entries.
 - (a) Outstanding checks of \$3,000 did not appear on the bank statement.
 - (b) The last 2 days' deposited receipts, \$2,850, did not appear on the bank statement.
 - (c) The depositor's check for \$120 for supplies was written in the records as \$210.
 - (d) Bank service charge, \$4.
 - (e) A note left at the bank for collection, \$822, was paid and credited to the depositor's account.

| | |
|------|------|
| | |
| | |
| | |
| | |
| | |
| | |
| - | |
| | |

(a) and (b) do not require any adjusting entries.

| Cash | 90 | |
|----------------------|-----|-----|
| Supplies | | 90 |
| Bank Service Expense | 4 | |
| Cash | | 4 |
| Cash | 822 | |
| Notes Receivable | | 822 |

- 13.7. Using the following data, reconcile the bank account of the Kemper Motor Company.
 - 1. Bank balance, \$7,780
 - 2. Depositor's balance, \$6,500
 - 3. Note collected by bank, \$1,000, plus interest of \$30; a collection charge of \$10 was made by the bank.
 - 4. Outstanding checks, \$410.
 - 5. Deposit in transit, \$150.

| Balance per bank statement | \$7,780 | Balance per Kemper's books | \$6,500 |
|----------------------------|---------|-----------------------------|---------|
| Add: Deposit in transit | 150 | Add: Note collected by bank | |
| | \$7,930 | Note \$1,000 | |
| Less: | | Interest 30 | 1,030 |
| Outstanding checks | 410 | | \$7,530 |
| | | Less: Collection charge | 10 |
| Adjusted balance | \$7,520 | Adjusted balance | \$7,520 |

13.8. Prepare the adjusting entries needed for Prob. 13.7.

| Cash | | 255 |

- **13.13.** Based on the following information, prepare a reconciliation of the Armando Company's bank account at December 31.
 - 1. Balance per bank statement, December 31, \$88,489.12.
 - 2. Balance per books, December 31, \$58,983.46.
 - 3. Outstanding checks, December 31, \$32,108.42.
 - 4. Receipts of December 31, 19X8 deposited January 2, \$5,317.20.
 - 5. Service charge for November per bank memorandum of December 15, \$3.85.
 - 6. Proceeds of bank loan, December 15, omitted from company books, \$9,875.00.
 - 7. Deposit of December 23, omitted from bank statement, \$2,892.41.
 - 8. Check of Rome Products Company charged back by bank on December 22 for absence of countersignature. No entry was made on the books for the chargeback, \$417.50.

9. Error on bank statement in entering deposit of December 16:

| Current amount | \$3,182.40 |
|----------------------|------------|
| Entered in statement | 3,181.40 |
| | \$ 1.00 |

- 10. Check 3917 of Arandon Manufacturing Company charged by bank in error to company's account, \$2,690.00.
- 11. Proceeds of note of J. Somers & Company, collected by bank on December 10, not entered in cash book:

| Principal | \$2,000.00 |
|-------------------------|------------|
| Interest | 20.00 |
| | \$2,020.00 |
| Less: Collection charge | 5.00 |
| | \$2,015,00 |

- 12. Erroneous debit memorandum of December 23 to charge company's account with settlement of bank loan, which was paid by check 8714 on same date, \$5,000.00.
- 13. Error on bank statement in entering deposit of December 4:

| Entered as | \$4,817.10 |
|----------------|------------|
| Correct amount | 4,807.10 |
| | \$ 10.00 |

Payroll

14.1 GROSS PAY

The pay rate at which employees are paid is generally arrived at through negotiations between the employer and the employees. The employer, however, must conform with all applicable federal and state laws (minimum wage, and so on). One law requires that certain workers be compensated at $1\frac{1}{2}$ times their regular pay for hours worked over 40.

Gross pay for wage earners is generally computed by using an individual time card.

EXAMPLE 1

Based on the time card, the computation of Ms. Stephenson's gross pay appears below. Note that 1 hour is allowed for lunch each day.

Time Card

| Name Caro Week Ended | 12/25/X8 | Pay Rate/Hour _ | \$9.00 |
|-------------------------|-----------|-------------------|---------|
| | | | Working |
| | Time In | Time Out | Hours |
| Monday | 8:00 A.M. | 5:00 P.M. | 8 |

 Regular pay: 40 hours \times \$9.00
 \$360.00

 Overtime pay: 6 hours \times $1\frac{1}{2}$ \times \$9.00
 81.00

 Gross pay
 \$441.00

14.2 DEDUCTIONS FROM GROSS PAY

Federal Withholding Taxes. Under the federal withholding tax system (commonly known as "pay as you go"), federal income tax is collected in the year in which the income is received, rather than in the following year. Thus, employers must withhold funds for the payment of their employees' federal income taxes. The amount to be withheld depends on the number of exemptions the employee is allowed (Form W-4, see Fig. 14-1), the amount of the employee's earnings, and the employee's marital status. An employee is entitled to one personal exemption and one for his or her spouse and each dependent.

Fig. 14-1

Federal Insurance Contributions Act (FICA). The FICA tax (a combination of social security and Medicare) helps pay for federal programs for old age and disability benefits, Medicare, and insurance benefits to survivors. During working years, money is set aside from an employee's earnings and placed along with all other employees' contributions to the Social Security fund. When the employee's earnings cease because of disability, retirement, or death, money from this fund is made available to his or her dependents, survivors, or to the employee himself or herself. A combined tax rate of 7.65 percent [6.2 percent for old-age, survivors, and disability insurance (OASDI), also known by the more popular term "Social Security," and 1.45 percent for hospital insurance (Medicare)] is imposed on both employer and employee. The OASDI rate (6.2 percent) applies to wages within the OASDI wage base, which is \$68,400 for 1998. The Medicare rate (1.45 percent) applies to all wages with no limit.

EXAMPLE 2

Fran Johnson's earnings prior to this week were \$67,800. This week her salary was \$500. Her total FICA deduction would be \$38.25 ($$500 \times 7.65$ percent). If Fran had earned \$68,300 prior to this pay period, only \$100 (\$68,400 maximum earnings) would be subject to OASDI and the total FICA tax would be only \$13.45 ($$100 \times 7.65$ percent + $$400 \times 1.45$ percent).

If an individual works for more than one employer during a year, each employer must withhold and pay taxes on the first \$68,400. The employee will be granted a refund from the government if he or she pays taxes on more than the \$68,400 base.

Notice that the withholding of any wages represents, from the employer's viewpoint, a liability, because the employer must pay to the government the amount withheld from the employee.

In addition to taxes, or involuntary deductions, there may be a number of voluntary deductions made for the convenience of the employee, such as group insurance premiums, hospitalization programs, savings plans, retirement payments, union dues, and charitable contributions.

EXAMPLE 3

Harold Eccleston earned \$580 for the week. Deductions from his pay were federal withholding, \$85; FICA, \$44.37; insurance, \$12; union dues, \$18. What is his net pay?

| Gross pay | | \$580.00 |
|---------------------|-------|----------|
| Federal withholding | 85.00 | |
| FICA | 44.37 | |
| Insurance | 12.00 | |
| Union dues | 18.00 | 159.37 |
| Net pay | | \$420.63 |

14.3 THE PAYROLL SYSTEM

The payroll system generally consists of input data (individual time cards), a payroll register (to compute the payroll each payroll period), individual earnings cards (a detached record for each employee), and a procedure for recording the payroll and the related employer taxes with appropriate liabilities. Most payroll systems are now completely computerized.

(A) Individual Time Card

Although the overall payroll is recorded periodically in a payroll register, it is also necessary to accumulate the earnings and the deductions for each employee separately. These individual records facilitate the preparation of required governmental reports and assist the employer in maintaining control over payroll expenditures. They also act as convenient references to basic employee information such as earnings to date, exemptions, filing status, and employee classification. Information from the payroll register is posted to the individual earnings cards after recording the payroll.

Individual Earnings Record

| Name | Filing Status | |
|---------|--------------------|--|
| Address | Exemptions Claimed | |

| | | | | | | | | | | |
| | | | | | | | | | | |
| | | | | | | | | | | |
| First Quarte | r | | | | | | | i | | |

(B) Payroll Register

A payroll register is a specially designed form used at the close of each payroll period (weekly, biweekly, and so on) to summarize and compute the payroll for the period. Although the design of this form may vary slightly depending on the desired information and the degree of automation, most contain the same basic information.

Refer to the payroll register (Table 14-1) and note that it is broken into five sections:

- 1. Gross earnings (regular, overtime, total).
- 2. Taxable earnings (information only), used as a reference in computing FICA tax withheld or paid by the employer and unemployment tax payable by the employer.
- 3. Deductions from gross pay—a place is provided for each tax withheld and for total deductions.
- 4. Net pay. This is the employee's take-home pay. This may be checked by adding the total of deductions to the net pay. The result should be the gross pay.
- 5. Specific accounts to which gross salaries are charged.

EXAMPLE 4

Complete Table 14-1 using the payroll data in Table 14-2. Table 14-3 shows the completed payroll register for the Atlas Company as of June 15.

14.4 RECORDING THE PAYROLL

The payroll entry is generally recorded in the general ledger. Since the payroll register is the input for the entry, it is generally totaled for the payroll period and proved before any entry is made.

EXAMPLE 5

From the summarized data in Table 14-3, record the payroll in general journal form.

(A) Payroll Taxes Imposed on the Employer (Table 14-4)

Social Security (Federal Insurance Contributions Act). Not only is Social Security (FICA) withheld from the employee's pay, but a matching amount is paid by the employer. The employer's contribution is generally computed by multiplying the total taxable payroll for the current period by 7.65 percent and adding the difference between the total OASDI payroll and the taxable Medicare payroll multiplied by 1.45 percent. The two 7.65 percent contributions (7.65 percent from the employee; 7.65 percent from the employer) are reported quarterly by the employer on federal Form 941 along with federal withholding tax. This tax payment is made at a member bank of the Federal Reserve.

Unemployment Taxes. Employers are required to pay unemployment taxes to both the federal and state governments under the Federal Unemployment Tax Acts (FUTA) and the State Unemployment Tax Acts (SUTA). Under current legislation, the tax is imposed only on the first \$7,000 of each employee's earnings. Although the typical state unemployment tax rate is 5.4 percent, rates vary depending on the state, the nature of the business, and the employer's experience with unemployment. For 1998, the official federal unemployment tax rate was 6.2 percent. However, as long as the employer is up to date on the state tax, the employer is allowed an automatic credit of 5.4 percent no matter what rate the employer actually pays. The effective federal unemployment tax rate is therefore 0.8 percent.

Paid by Rate Tax Employee Employer FICA: OASDI* Yes Yes 6.20% on first \$68,400 of wages Medicare Yes 1.45% on all wages Yes Fed. Income Yes No Varies with exemptions; based on table 0.8% of first \$7,000 Fed. Unemp. No Yes State Unemp. No Yes Up to 6.2% of first \$7,000

Table 14-4 Payroll Taxes

(B) Recording the Employer's Taxes

When the payroll entry is recorded, the employer's contribution will also be recorded.

^{*}Also known as Social Security.

From the data summarized in the payroll register (Table 14-3), record the employer's taxes for the payroll period. (Assume a 3.4 percent state unemployment tax rate and a 0.8 percent federal rate.)

Solved Problems

14.1. Below is a time card for Carol Popich. Complete the hours section of her time card and compute her gross pay. Allow 1 hour for lunch each day.

Time Card

| | ol Popich | Pay Rate/Hour\$ | 6.40 |
|--------------|-----------|----------------------|-------|
| Week Ended _ | 9/20/X8 | | |
| | Time In | Time Out | Hours |
| Monday | 8:00 A.M. | 5:00 P.M. | |
| Tuesday | 8:00 A.M. | 5:00 P.M. | |
| Wednesday | 8:00 A.M. | 7:00 P.M. | |
| Thursday | 8:00 A.M. | 8:30 P.M. | |
| Friday | 8:00 A.M. | 7:30 P.M. | |
| Approved | | Total Hours for Week | |

Time Card

| NameCar | ol Popich | Pay Rate/Hour | \$6.40 |
|--------------|-----------|----------------------|-----------------|
| Week Ended _ | 9/20/X8 | | |
| | Time In | Time Out | Hours |
| Monday | 8:00 A.M. | 5:00 P.M. | 8_ |
| Tuesday | 8:00 A.M. | 5:00 P.M. | 8 |
| Wednesday | 8:00 A.M. | 7:00 P.M. | 10 |
| Thursday | 8:00 A.M. | 8:30 P.M. | $11\frac{1}{2}$ |
| Friday | 8:00 A.M. | 7:30 P.M. | $10\frac{1}{2}$ |
| Approved | 12. | Total Hours for Week | 48 |

| Regular pay: 40 hours \times \$6.40 = | \$256.00 |
|--|----------|
| Overtime pay: 8 hours \times \$9.60* = | 76.80 |
| Total gross pay | \$332.80 |

^{*}Time and one-half rate.

- 14.2. How many exemptions are permitted to be claimed on Form W-4 in the following cases:
 - (a) Taxpayer
 - (b) Taxpayer and (nonworking) spouse
 - (c) Taxpayer and working spouse
 - (d) Taxpayer, spouse, and two children

(a) 1, (b) 2, (c) 2-if spouse does not claim herself, (d) 4-provided spouse does not claim herself

14.3. Based on the Social Security rate of 6.2% (up to \$68,400) and the Medicare rate of 1.45% (unlimited), how much will be withheld from the following employees:

| | Amount Earned | Amount Earned | Amount Withheld |
|----------------|--------------------------|----------------------|------------------------|
| Employee | Prior to Current Payroll | This Week | for FICA |
| (a) I. Blanton | \$20,000 | \$400 | ? |
| (b) P. Burday | 68,200 | 480 | ? |
| (c) M. Fleming | 89,100 | 500 | ? |

SOLUTION

- (a) $$30.60 ($400 \times 7.65\%)$
- (b) \$22.26 (\$200 balance \times 7.65% + \$480 \times 1.45%)
- (c) $$5.75 ($500 \times 1.45\%)$

14.4. Complete the table below based on the employer's payroll obligation. Assume a state rate of 3.4 percent and a federal rate of 0.8 percent.

| | | Amount Earned | Prior | | Federal | State |
|-----|--------------|----------------------|----------|---------|--------------|--------------|
| | Employee | This Week | Earnings | FICA | Unemployment | Unemployment |

Property, Plant, and Equipment: Depreciation

15.1 FIXED ASSETS

Tangible assets that are relatively permanent and are needed for the production or sale of goods or services are termed property, plant, and equipment, or fixed assets. These assets are not held for sale in the ordinary course of business. The broad group is usually separated into classes according to the physical characteristics of the items (e.g., land, buildings, machinery and equipment, furniture and fixtures).

The cost of property, plant, and equipment includes all expenditures necessary to put the asset into position and make it ready for use.

EXAMPLE 1

For a lathe purchased by AB Optical Company, the data were invoice price, \$11,000; cash discount, \$220; freight-in, \$300; trucking, \$200; electrical connections and installation, \$720. The total cost is \$11,000 - \$220 + \$300 + \$200 + \$720 = \$12,000. Therefore, the entry is

Machinery and Equipment

12,000

Cash

12,000

15.2 DEPRECIATION AND SCRAP VALUE

Though it may be long, the useful life of a fixed asset is limited. Eventually the asset will lose all productive worth and will possess only salvage value (scrap value). The accrual basis of accounting demands a period-by-period matching of costs against derived revenues. Hence, the cost of a fixed asset (over and above its scrap value) is distributed over the asset's entire estimated lifetime. This spreading of the cost over the periods that receive benefits is known as depreciation.

To determine depreciation expense for a fixed asset, we need the following information:

- 1. Cost. The total purchase price of the item, including its initial cost, transportation, sales tax, installation, and any other expense to make it ready for use.
- 2. Estimated useful life. The projected life during which the business expects the asset to function. This may be expressed in years, miles, units of production, or other measures appropriate to the particular equipment. For example, a building or store may be depreciated over a number of years, an automobile by mileage, and a printing press by the number of units it prints or hours it is used.
- 3. **Residual value.** Also called scrap or salvage value, the estimated value of the asset when it is fully depreciated. When subtracted from the cost of the asset, it produces the "depreciable cost." For example, a \$14,000 press with a scrap value of \$4,000 has a depreciable cost of \$10,000 (\$14,000 \$4,000). If the business expects the asset to have no value at the end of the depreciation period, the asset's entire cost (\$14,000 for the press) should be depreciated.

Depreciation decreases the fixed asset's book value and also decreases capital. Depreciation is considered an operating expense of the business. It may be recorded by an entry at the end of each month or at the end of the year, usually depending on the frequency of preparing financial statements. Fixed assets are recorded at cost and remain at that figure as long as they are held. The depreciation taken to date is shown as a credit in the offset account Accumulated Depreciation and is deducted from the asset account on the balance sheet, as shown in Example 2 below.

An offset (or contra) account is an account with a credit balance that is offset against (deducted from) an asset account to produce the correct balance sheet book value. The offset account appears in the general ledger directly after its companion account. Generally, every depreciable asset has its own account and an accumulated depreciation account. To determine the asset's book, or carrying, value, the accumulated depreciation account is subtracted from the asset account.

EXAMPLE 2

Equipment \$10,000 Less: Accumulated Depreciation 4,000 \$6,000

The book value of the equipment has gone from \$10,000 to \$6,000.

There is one exception to the above considerations: land. This fixed asset is nondepreciable; it is usually carried on the books permanently at cost.

15.3 METHODS OF DEPRECIATION

The depreciable amount of a fixed asset—that is, cost minus scrap value—may be written off in different ways. For example, the amount may be spread evenly over the years affected, as in the straight-line method. Two accelerated methods, the double-declining-balance method and the sum-of-the-years'-digits method, provide for larger amounts of depreciation in the earlier years. Repairs, on the other hand, are generally lower in the earlier years, so the total cost of depreciation and repairs should be about the same each year. The units-of-production method bases depreciation each period on the amount of output.

(A) Straight-Line (SL)

The straight-line method is the simplest and most widely used depreciation method. Under this method, an equal portion of the cost of the asset is allocated to each period of use. The periodic charge is expressed as

$$\frac{\text{Cost} - \text{scrap value}}{\text{Useful life (in years)}} = \text{annual depreciation charge}$$

EXAMPLE 3

Cost of machine, \$17,000; scrap value, \$2,000; estimated life, 5 years.

$$\frac{\$17,000 - \$2,000}{5} = \$3,000 \text{ per year}$$

The entry to record the depreciation would be

In order to have sufficient documentation for an asset's depreciation, a schedule should be prepared showing the asset's cost, depreciation expense, accumulated depreciation, and, most important of all, its "book value." Book value (or "undepreciated cost") is the balance of an asset's cost less its accumulated depreciation to date. Based upon Example 3, the book value at the end of each year would be

| | Accumulated | | | | |
|---------------|-------------|---|--------------|---|------------|
| | Cost | | Depreciation | | Book Value |
| 19X5 | \$17,000 | _ | \$ 3,000 | = | \$14,000 |
| 19 X 6 | \$17,000 | _ | \$ 6,000 | = | \$11,000 |
| 19X7 | \$17,000 | _ | \$ 9,000 | = | \$ 8,000 |
| 19X8 | \$17,000 | _ | \$12,000 | = | \$ 5,000 |
| 19X9 | \$17,000 | _ | \$15,000 | = | \$ 2,000 |

Book value should not be confused with market value. The book value is the difference between cost and accumulated depreciation. Market value is what the asset can actually be sold for on a given date.

As an asset is used, accumulated depreciation increases and book value decreases. The last column shows the asset's book value in any year. In the fifth and final year, 19X9, book value is the same as scrap value. At this point, the asset is said to be fully depreciated.

In the preceding example, we assumed that the machine was purchased at the beginning of the year, permitting depreciation of the machine for the full 12 months. But often, assets are bought during the year. When this happens, the amount of depreciation is recorded not for the entire year, but only for the number of months the asset is used, to the nearest whole month.

If an asset is held for more than half a month, that month is counted. If it is held for less than 15 days in any month, that month is not counted. An asset bought on or before the 15th of the month is considered to be in use and therefore can be depreciated for the entire month. If it is bought on or after the 16th, it cannot be depreciated for that month. Depreciation will begin the following month.

A truck bought on April 6, 19X8, is depreciated for 9 months, April through December $(\frac{9}{12} \text{ or } \frac{3}{4} \text{ of the year})$. But if it is bought on April 16, depreciation is calculated for only 8 months; May through December $(\frac{8}{12} \text{ or } \frac{2}{3} \text{ of the year})$. After this first, partial year, the truck is depreciated for each remaining full 12-month year until it is fully depreciated.

EXAMPLE 5

The cost of a machine is \$25,000. It has scrap value of \$5,000 and an estimated life of 5 years. It was purchased on September 18, 19X8. To calculate annual depreciation:

$$\frac{$25,000 - $5,000}{5 \text{ years}} = $4,000 \text{ annual depreciation expense}$$

To calculate depreciation at the end of the first year, determine what fraction of the year the machine was actually used. In this case, it was three months in the first year: October, November, and December. That's because an asset put into use after the 15th day of any month is not included in the depreciation calculation. Thus, the calculation is:

$$\frac{\text{3 (months of use)}}{\text{12 (months)}} \times \$4,000 \text{ (annual depreciation)} = \$1,000 \text{ first-year depreciation expense}$$

Entry:

*(\$4,000 $\times \frac{1}{4}$) To record depreciation for the last three months of the 1st year of operation.

And one more point: Annual depreciation can also be calculated using a percentage rate instead of years. This percentage is based on the asset's cost and life. It is calculated by dividing the whole number 1.00 by the asset's life in years.

EXAMPLE 6

(a) A building has a projected life of 50 years. (b) A printing press has an estimated life of 5 years. To calculate depreciation using percentage:

(a)
$$\frac{1.00}{50 \text{ (building's life in years)}} = .02 \text{ or } 2\% \text{ annually}$$

(b)
$$\frac{1.00}{5 \text{ (press's life in years)}} = .20 \text{ or } 20\% \text{ annually}$$

If the printing press was purchased for \$12,000 on January 10, 19X5, and had a scrap value of \$4,000, what would be the depreciation for each of the five years?

Based on a 20% annual depreciation rate, the depreciation for each of the five years would be the same:

$$19X5$$
: $$12,000 - $4,000 \times 20\% = $1,600$
 $19X6$: $$12,000 - $4,000 \times 20\% = $1,600$
 $19X7$: $$12,000 - $4,000 \times 20\% = $1,600$
 $19X8$: $$12,000 - $4,000 \times 20\% = $1,600$
 $19X9$: $$12,000 - $4,000 \times 20\% = $1,600$

(B) Units-of-Production (UOP)

Units-of-production depreciation is based on an asset's usage. This can be expressed in

- (a) Units produced
- (b) Hours consumed
- (c) Mileage driven

This method is used when an asset's usage varies from year to year.

Units Produced. Under the first variation of the UOP method, a fixed amount of depreciation is allocated to each unit of output produced by the machine. The per-unit depreciation expense is multiplied by the number of items produced in each accounting period. This depreciation method accurately reflects the depreciation expense for the asset because it is based on the number of units produced in each period. Depreciation per unit is computed in two steps:

Units produced × unit depreciation = annual depreciation expense

EXAMPLE 7

Cost of machine, \$17,000; scrap value, \$2,000; total estimated units produced during lifetime, 300,000.

First-year production 25,000 units Second-year production 30,000 units

The depreciation expense for the first and second years would be calculated as

 $\frac{\$17,000 - \$2,000}{300,000} = \$.05$ depreciation per unit

Year 1: $25,000 \text{ units} \times \$0.5 = \$1,250$ Year 2: $30,000 \text{ units} \times \$0.5 = \$1,500$

Entry for first year:

Depreciation Expense, Machine 1,250

Accumulated Depreciation, Machine 1,250

Entry for second year:

Depreciation Expense, Machine 1,500

Accumulated Depreciation, Machine 1,500

The machine will continue to be depreciated until the 300,000 units have been produced. Since only production (not time) is considered when using this method, it gives a clearer picture of the machine's true cost.

Hours Used. In this second variation of UOP, a fixed amount of depreciation is allocated, based on the number of hours a machine is used. (Under straight-line, depreciation expense is based on the passage of time regardless of actual use.)

Determine the depreciation for the following machines in the first year using straight-line depreciation.

| | Machine A | Machine B |
|----------------|----------------|----------------|
| Cost | \$22,000 | \$22,000 |
| Scrap value | \$ 2,000 | \$ 2,000 |
| Estimated life | 5 years | 5 years |
| | (18,000 hours) | (18,000 hours) |

Machine A was in use 3,000 hours in the first year. Machine B was in use 1,000 hours in the first year.

To calculate:

$$\frac{$22,000 - $2,000}{5 \text{ years}} = $4,000 \text{ annual depreciation expense}$$

Machines A and B both have the same annual depreciation cost of \$4,000 because the straight-line method does not consider hours of use, but only the estimated life of the machine.

EXAMPLE 9

Using the information in Example 8, determine the depreciation cost of (a) machine A and (b) machine B using the units-of-production method based on hours used.

$$\frac{$22,000 - $2,000}{18,000 \text{ hours}} = $1.11 \text{ depreciation rate per hour of operation}$$

- (a) Machine A: $3.000 \text{ hours} \times \$1.11 = \$3,330 \text{ first-year depreciation expense}$
- (b) Machine B: 1,000 hours \times \$1.11 = \$1,110 first-year depreciation expense

The difference between the first-year depreciation using the straight-line method (Example 8) and that using the units-of-production method (Example 9) is considerable. Under the UOP method, machine B's limited use results in its having 1/3 the depreciation expense of machine A. Under the straight-line method, both machines carry the same depreciation expense, regardless of use. In this case, UOP is the more logical choice for reporting depreciation because it more accurately matches depreciation expense against periodic income. Under UOP, both machines will be fully depreciated when they have completed 18,000 hours of use.

Mileage Driven. Under the third variation of UOP depreciation, instead of using time to calculate depreciation, the number of miles driven are the "units." The depreciation expense per mile will remain constant over the life of the truck and will be multiplied by the actual miles the truck is driven in each accounting period.

EXAMPLE 10

A truck costing \$24,000 with salvage value of \$4,000 has an estimated useful life of 80,000 miles. If, in the first year, it is driven 18,000 miles, what is the entry needed to record depreciation expense?

$$\frac{\$24,000 \text{ (cost)} - \$4,000 \text{ (salvage value)}}{80,000 \text{ total estimated miles}} = \$.25 \text{ per mile}$$

18,000 (miles driven) \times \$.25 = \$4,500 First-year depreciation expense

Depreciation Expense, Truck 4,500
Accumulated Depreciation, Truck 4,500

Suppose the truck is driven the following numbers of miles:

Year 1: 18,000 miles driven Year 2: 21,000 miles driven Year 3: 19,000 miles driven Year 4: 22,000 miles driven 80,000

If a depreciation table were to be developed for Example 10, using this information below, it would appear as:

| Year | A Cost of Truck | Miles Driven | Annual Dep. Exp. | B Accumulated Depreciation | A – B Book* Value |
|------|-----------------------|----------------------|---------------------|----------------------------------|-------------------------|
| 1 | \$24,000 | 18,000 | \$4,500 | \$ 4,500 | \$19,500 |
| 2 | \$24,000 | 21,000 | \$5,250 | \$ 9,750 | \$14,250 |
| 3 | \$24,000 | 19,000 | \$4,750 | \$14,500 | \$ 9,500 |
| 4 | \$24,000 | 22,000 | \$5,500 | \$20,000 | \$ 4,000** |
| | | \$0,000 [†] | | | |

^{*}Book value = cost - accumulated depreciation.

(C) Declining-Balance (DB)

Declining-balance is an accelerated method of depreciation because a greater amount of depreciation expense is taken in the early years of an asset's life and less is taken in later years. This method is preferred for the following reasons:

- 1. Technology can make an asset obsolete or inadequate before the asset wears out.
- 2. Most plant assets decline in value more quickly in their early years than in later years.
- 3. Often, an asset contributes most to a business during its first years of operation.
- 4. The expenditure for equipment is made at the beginning of the asset's life.
- 5. It is good accounting practice to charge more depreciation in the early years of an asset's useful life because in later years repair and maintenance expenses are incurred as the asset gets older.

The double-declining-balance method (DDB) produces the highest amount of depreciation in earlier years. It does not recognize scrap value. Instead, the book value of the asset remaining at the end of the depreciation period becomes the scrap value. Under this method, the straight-line rate is doubled and applied to the declining book balance each year. Many companies prefer the double-declining-balance method because of the faster write-off in the earlier years when the asset contributes most to the business and when the expenditure was actually made. The procedure is to apply a fixed rate to the declining book value of the asset each year. As the book value declines, the depreciation becomes smaller.

^{**}Salvage value is reached.

[†]The asset is fully depreciated.

A \$17,000 asset is to be depreciated over 5 years. The double-declining-balance rate is thus 40 percent per year.

| Book Value at Beginning of Year | Rate | Depreciation for Year | Book Value at End of Year |
|------------------------------------|--------------------------------------|--|---|
| \$17,000 | 40% | \$6,800 | \$10,200 |
| 10,200 | 40% | 4,080 | 6,120 |
| 6,120 | 40% | 2,448 | 3,672 |
| 3,672 | 40% | 1,469 | 2,203 |
| 2,203 | 40% | 881 | 1,322 |
| | \$17,000 10,200 6,120 3,672 | \$17,000 40% 10,200 40% 6,120 40% 3,672 40% | Beginning of Year Rate for Year \$17,000 40% \$6,800 10,200 40% 4,080 6,120 40% 2,448 3,672 40% 1,469 |

The \$1,322 book value at the end of the fifth year becomes the scrap value. If, however, a scrap value of \$2,000 had been estimated, the depreciation for the fifth year would be \$203 (\$2,203-\$2,000) instead of \$881.

The date of purchase should also be considered. Up to this point it has been assumed that the equipment was purchased at the beginning of the year, which is usually not a common occurrence. Therefore a change in the computation for the first partial year of service is needed.

EXAMPLE 12

If in Example 11 the equipment had been purchased and placed into use at the end of the ninth month of the fiscal year, the pro rata portion of the first full year's depreciation would be

$$\frac{3}{12}(40\% \times 17,000) = \$1,700$$

The method of computation for the remaining years would not be affected. Thus

$$40\% (\$17,000 - \$1,700) = \$6,120$$

would be the depreciation for the second year and \$9,180 (\$17,000 - \$7,820) its book value.

(D) Sum-of-the-Years'-Digits (SYD)

The fourth method of computing depreciation is sum-of-the-years'-digits. Like DDB, it is an accelerated method that allows more depreciation expense to be recorded in the early years of an asset's life and less in later years. As with DDB, depreciation expense declines over the life of the asset; however, unlike the case with DDB, it declines by the same amount each year.

To determine depreciation expense under SYD, the asset's cost (minus scrap value) is multiplied by a fraction. The numerator of the fraction is the years remaining in the asset's life, but in reverse order. It changes each year. The denominator is the sum of all the digits (hence its name) making up the life of the asset. It remains constant. Here is what the fraction looks like:

Example 13 shows how to compute depreciation expense with the SYD method using this fraction.

The years of the asset's lifetime are labeled 1, 2, 3, etc., and the depreciation amounts are based on a series of fractions having the sum of the years' digits as the common denominator. The largest digit is used as the numerator for the first year, the next largest digit for the second year, and so forth.

Cost of machine, \$17,000; scrap value, \$2,000; estimated life, 5 years.

The depreciable amount is 17,000 - 2,000 = 15,000. To find the fraction of this amount to be written off each year, proceed as follows:

- 1. Label the years 1, 2, 3, 4, and 5.
- 2. Calculate the sum of the years' digits: S = 1 + 2 + 3 + 4 + 5 = 15.
- 3. Convert the sum to a series of fractions:

$$\frac{1}{15} + \frac{2}{15} + \frac{3}{15} + \frac{4}{15} + \frac{5}{15} = 1$$

4. Take the above series of fractions in reverse order as the depreciation rates. Thus:

| Year | Fraction | | Amount | | Depreciation |
|------|----------|---|----------|---|--------------|
| 1 | 5/15 | X | \$15,000 | = | \$ 5,000 |
| 2 | 4/15 | × | 15,000 | = | 4,000 |
| 3 | 3/15 | × | 15,000 | = | 3,000 |
| 4 | 2/15 | × | 15,000 | = | 2,000 |
| 5 | 1/15 | × | 15,000 | = | _1,000 |
| | | | | | \$15,000 |

If the life expectancy of a machine were 5 years as stated above, you could follow step 2 by adding 1+2+3+4+5=15. However, for a machine that has a long life expectancy, it is simpler to use the formula

$$S = \frac{N(N+1)}{2}$$
 $S = \text{sum}; N = \text{number of years}$

In the above equation:

$$S = \frac{5(5+1)}{2}$$
$$S = \frac{5(6)}{2}$$

$$S = \frac{30}{2} = 15$$

EXAMPLE 14

The life of a piece of equipment is calculated to be 30 years. The sum of the years' digits would be

$$S = \frac{30(30+1)}{2} = 465$$

(E) Partial-Year Depreciation

If an asset is purchased during the year rather than at the beginning, each full year's depreciation must be allocated between the two fiscal years affected to assure accurate reporting and accounting.

If a machine bought on October 2, 19X8, costing \$30,000, with a 10-year life, has a scrap value of \$2,500, the depreciation for the first two years would be determined as follows:

Year 1

19X8:
$$\$27,500 \times \frac{10}{55} = \$5,000 \times \frac{3*}{12} = \frac{\$1,250}{12}$$
 depreciation expense

Year 2:

19X9:
$$\$27,500 \times \frac{10}{55} = \$5,000 \times \frac{9^{**}}{12} = \$3,750$$
 depreciation expense + $\$27,500 \times \frac{9}{55} = \$4,500 \times \frac{3}{12} = \underline{\$1,125}$ depreciation expense = $\underline{\$4,875}$ depreciation expense

(F) Comparison of Methods

Once you know the four methods of depreciation, the next question is how to select the one that's most appropriate. Under generally accepted accounting principles (GAAP), businesses are encouraged to match the income an asset produces against its expense. This can be accomplished by selecting the correct depreciation method.

The four principal methods of depreciation are compared in Table 15-1. It is assumed that over a 5-year lifetime the asset was in operation for the following numbers of hours: 1,800, 1,200, 2,000, 1,400, 1,600. Cost of asset, \$17,000; scrap value, \$2,000.

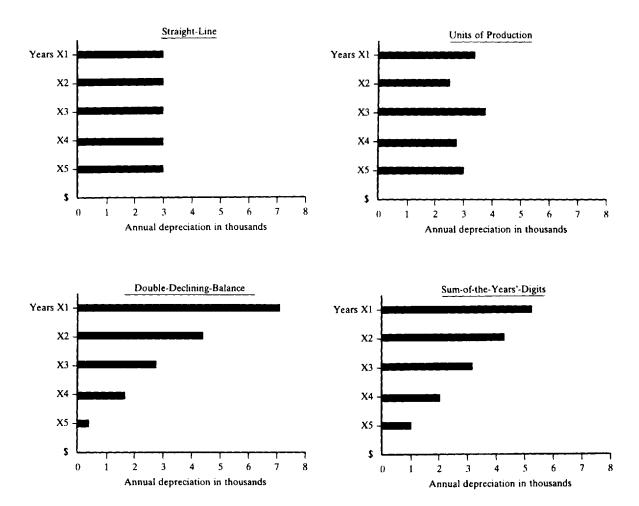

Table 15-1 Annual Depreciation Charge

| Year | Straight-Line (SL) | Units-of- Production (UOP) | Double-Declining- Balance (DDB) | Sum-of-the- Years'-Digits (SYD) |
|-------|-----------------------|----------------------------------|---------------------------------------|---------------------------------------|
| 1 | \$ 3,000 | \$ 3,375 | \$ 6,800 | \$ 5,000 |
| 2 | 3,000 | 2,250 | 4,080 | 4,000 |
| 3 | 3,000 | 3,750 | 2,448 | 3,000 |
| 4 | 3,000 | 2,625 | 1,468 | 2,000 |
| 5 | 3,000 | 3,000 | 204 | 1,000 |
| Total | \$15,000 | \$15,000 | \$15,000 | \$15,000 |

^{*}Use of the machine for 3 months

^{**}Balance (12 months - 3 months)

Depreciation Method Comparison Chart

Based upon Table 15-1 and the graphs, we can conclude the following:

- (a) If the asset is expected to generate income evenly over an extended period of time, the straight-line method should be used.
- (b) If the asset will produce a different number of units each year, or if the machine may wear out early, the units-of-production method is preferable because it is based upon usage rather than time. In other words, the more units produced in a single year, the higher the asset's annual depreciation expense.
- (c) If the asset is expected to generate high income in its early years, the double-declining-balance method should be used because it will generate greater depreciation expense in its earlier years, as it can be matched with the early period's higher revenues, or because it is closer to the date of purchase when the major expenditure was made. This accelerated depreciation method reduces tax liability in the early years, making more cash available for the asset's purchase.
- (d) If the asset is expected to generate high income in its early years, the accelerated method of sum-of-the-years' digits is another method of rapid depreciation write-off. Like double-declining-balance, this accelerated depreciation process reduces tax liability in the early years and increases available cash to pay for the asset.

Summary

| 1. | The main reason for depreciation is |
|-----|---|
| 2. | Accumulated Depreciation is an example of a(n) account, since the fixed asset remains at cost while the offset builds up. |
| 3. | The market value of a fixed asset at the end of its service is known as |
| 4. | The uniform distribution of depreciation over the life of the asset is known as the method. |
| 5. | The method is used to write off the asset based on a series of fractions. |
| 6. | The method that produces the largest amount of depreciation in the earlier years, then rapidly declines, is known as the method. |
| 7. | Under SYD depreciation, (less/more) depreciation expense is recorded in the early years and (less/more) depreciation expense is recorded as the asset gets older. |
| 8. | Under SYD, the final year's book value must be the same as its value. |
| 9. | When income produced by an asset is the same each year, the recommended method of depreciation is |
| 10. | Where use rather than time is the key factor, is the preferred method of depreciation. |
| 11. | If the largest amount of depreciation is taken in the first year of an asset's operation, then the business is using the method of depreciation. |

Solved Problems

double-declining-balance; 7. more, less; 8. scrap; 9. SL; 10. UOP; 11. DDB; 12. SYD, DDB

15.1. Hacol Company acquired an asset on January 1, 19X8, at a cost of \$38,000, with an estimated useful life of 8 years and a salvage value of \$2,000. What is the annual depreciation based on the straight-line method?

 Cost
 \$38,000

 Scrap value
 2,000

 Amount to be depreciated
 \$36,000

 $$36,000 \div 8 \text{ years} = $4,500 \text{ depreciation per year}$

15.2. For the asset of Prob. 15.1, compute the depreciation for the first 2 years by the sum-of-the-years'-digits method.

SOLUTION

$$S = 8\left(\frac{8+1}{2}\right) = 36$$
Year 1: $\frac{8}{36} \times \$36,000 = \$8,000$
Year 2: $\frac{7}{36} \times \$36,000 = \$7,000$

15.3. Repeat Prob. 15.2, but using the double-declining-balance method.

SOLUTION

For the depreciation rate, we take twice the straight-line rate; that is,

$$2 \times \frac{100\%}{8 \text{ years}} = 25\% \text{ per year}$$

Therefore,

Year 1: $$38,000 \times 25\% = $9,500$ Year 2: $($38,000 - $9,500) \times 25\% = $7,125$

15.4. A truck was purchased on January 1, 19X8, for \$8,500, with an estimated scrap value of \$500. It will be depreciated for 8 years using the straight-line method. Show how the Truck account and the related Accumulated Depreciation account would appear on the balance sheet on (a) December 31, 19X8; (b) December 31, 19X9.

| (a) | | |
|-----|--|---|
| | | |
| (1) | | |
| (b) | | · |
| | | |

| (a) | Truck | \$8,500 | |
|-----|--------------------------------|---------|---------|
| | Less: Accumulated Depreciation | 1,000* | \$7,500 |
| (b) | Truck | \$8,500 | |
| | Less: Accumulated Depreciation | 2,000** | \$6,500 |

 $[\]frac{$8,500 - $500}{8 \text{ years}} = $1,000 \text{ per year}$

15.5. Based on Prob. 15.4, what amount will appear in the income statement for Depreciation Expense, Truck (a) for the year 19X8? (b) For the year 19X9?

SOLUTION

- (a) \$1,000 (1 year's depreciation)
- (b) \$1,000 (1 year's depreciation)
- 15.6. Equipment costing \$9,600, with an estimated scrap value of \$1,600, was bought on July 1, 19X8. The equipment is to be depreciated by the straight-line method for a period of 10 years. The company's fiscal year is January through December. Show how the equipment account and the related Accumulated Depreciation account would appear in the balance sheet on (a) December 31, 19X8; (b) December 31, 19X9.

| (a) | | |
|-----|--|--|
| | | |
| | | |
| (b) | | |
| | | |

SOLUTION

| (a) | Equipment | \$9,600 | |
|-----|--------------------------------|---------|---------|
| | Less: Accumulated Depreciation | 400* | \$9,200 |

^{*} $\frac{\$9,600 - \$1,600}{10 \text{ years}} = \$800 \text{ depreciation per year,}$ $\frac{1}{2} \text{ year (July 1 to Dec. 31)} \times \$800 \text{ per year} = \$400$

| (b) | Equipment | \$9,600 | |
|-----|--------------------------------|---------|---------|
| | Less: Accumulated Depreciation | 1,200* | \$8,400 |

 $^{*1\}frac{1}{2}$ years × \$800 per year = \$1,200

15.7. What amount will appear in the income statement for Depreciation Expense, Equipment (Prob. 15.6) (a) for the year 19X8? (b) For the year 19X9?

SOLUTION

(a) \$400 ($\frac{1}{2}$ year's depreciation) (b) \$800 (1 year's depreciation)

^{**}\$1,000 per year $\times 2$

| 1 | | | |
| 2 | | | |
| 3 | | | |
| 4 | | | |

Double-Declining-Balance Method

| Year | Depreciation Expense | Accumulated Depreciation | Book Value at End of Year |
|------|-------------------------|-----------------------------|------------------------------|
| 1 | | | |
| 2 | | | |
| 3 | | | |
| 4 | | | |

^{*\$28,000} cost - \$4,000 scrap value = \$24,000 \times 5/15 = \$8,000 per year. \$8,000 ÷ 12 months = \$666.67 \times 7 months = \$4,666.69 depreciation expense for the year.

Straight-Line Method

| Year | Depreciation Expense | Accumulated Depreciation | Book Value at End of Year |
|------|-------------------------|--------------------------|------------------------------|
| 1 | \$5,500* | \$ 5,500 | \$54,500** |
| 2 | 5,500 | 11,000 | 49,000 |
| 3 | 5,500 | 16,500 | 43,500 |
| 4 | 5,500 | 22,000 | 38,000 |

 $^{*(\$60,000 - \$5,000) \}div 10 = \$5,500$

Sum-of-the-Years'-Digits Method

| Year | Depreciation Expense | Accumulated Depreciation | Book Value at End of Year |
|------|-------------------------|--------------------------|------------------------------|
| 1 | \$10,000* | \$10,000 | \$50,000 |
| 2 | 9,000 | 19,000 | 41,000 |
| 3 | 8,000 | 27,000 | 33,000 |
| 4 | 7,000 | 34,000 | 26,000 |

^{*} $\frac{\$10(10+1)}{2}$ = 55; $\frac{10}{55}$ × \$55,000 = \$10,000

Double-Declining-Balance Method

| Year | Depreciation Expense | Accumulated Depreciation | Book Value at End of Year |
|------|-------------------------|--------------------------|------------------------------|
| 1 | \$12,000* | \$12,000 | \$48,000 |
| 2 | 9,600** | 21,600 | 38,400 |
| 3 | 7,680 | 29,280 | 30,720 |
| 4 | 6,144 | 35,424 | 24,576 |

 $^{*(2 \}times 10\%) \times $60,000 = $12,000$

15.13. Klein's Logging Company purchased a new truck for \$80,000 on January 1, 19X8, and put it into use on January 3, 19X8. The estimated life is 5 years, with an estimated scrap value of \$5,000. From this information, prepare three depreciation schedules, using (a) the straight-line method, (b) the double-declining-balance method, and (c) the sum-of-the-years'-digits method.

(a) Straight-line method

| Year | Depreciation Expense | Accumulated Depreciation at End of Year | Book Value at End of Year |
|------|-------------------------|---|------------------------------|
| 1 | | | |
| 2 | | | |
| 3 | | | |
| 4 | | | |
| 5 | | _ | |

^{**\$60,000 - \$5,500 = \$54,500}

 $^{**20\% \}times (\$60,000 - \$12,000) = \$9,600$

(b) Double-declining-balance method

| Year | Depreciation Expense | Accumulated Depreciation at End of Year | Book Value at End of Year |
|------|-------------------------|---|------------------------------|
| 1 | | | |
| 2 | | | |
| 3 | | | |
| 4 | | | |
| 5 | | | |

(c) Sum-of-the-years'-digits method

| Year | Depreciation Expense | Accumulated Depreciation at End of Year | Book Value at End of Year |
|------|-------------------------|---|------------------------------|
| 1 | | | |
| 2 | | | |
| 3 | | | |
| 4 | | | |
| 5 | | | |

SOLUTION

(a) Straight-line method

| Year | Depreciation Expense | Accumulated Depreciation at End of Year | Book Value at End of Year |
|------|-------------------------|---|------------------------------|
| 1 | \$15,000 | \$15,000 | \$65,000 |
| 2 | 15,000 | 30,000 | 50,000 |
| 3 | 15,000 | 45,000 | 35,000 |
| 4 | 15,000 | 60,000 | 20,000 |
| 5 | 15,000 | 75,000 | 5,000* |

^{*}Note that at the end of 5 full years, you end up with the estimated scrap value.

(b) Double-declining-balance method

| Year | Depreciation Expense | Accumulated Depreciation at End of Year | Book Value at End of Year |
|------|-------------------------|---|------------------------------|
| 1 | \$32,000 | \$32,000 | \$48,000 |
| 2 | 19,200 | 51,200 | 28,800 |
| 3 | 11,520 | 62,700 | 17,280 |
| 4 | 6,912 | 69,632 | 10,368 |
| 5 | 5,368* | 75,000 | 5,000 |

^{*}Note that at the end of 5 full years, you would have a scrap value of \$5,000 because the scrap value had been estimated. Thus depreciation expense of \$5,368 (\$10,368 - \$5,000) is produced for the last year.

(c) Sum-of-the-years'-digits method

$$S = \frac{5(5+1)}{2} = 15$$

| Year | Depreciation Expense | Accumulated Depreciation at End of Year | Book Value at End of Year |
|------|-------------------------|---|------------------------------|
| 1 | \$25,000 | \$25,000 | \$55,000 |
| 2 | 20,000 | 45,000 | 35,000 |
| 3 | 15,000 | 60,000 | 20,000 |
| 4 | 10,000 | 70,000 | 10,000 |
| 5 | 5,000 | 75,000 | 5,000 |

Property, Plant, and Equipment: Disposal and Taxation

16.1 ACCOUNTING PROCEDURES FOR DISPOSALS

Plant assets get old, eventually wear out, and must be replaced. When this occurs, the business disposes of the asset. Regardless of the method used, the asset and its related accumulated depreciation must be removed from the accounts upon disposal. The accumulated depreciation account is debited, and the asset is credited for its cost.

Accounting procedures for the disposal of a plant asset vary depending on how the asset is disposed of. Three methods will be described here:

- (A) Retiring (discarding) the asset
- (B) Selling the asset
- (C) Exchanging the asset

(A) Discarding the Asset

When plant assets are no longer needed (and usually are fully depreciated), they may be sold for scrap.

EXAMPLE 1

An item of equipment bought for \$15,000 was fully depreciated at the close of the preceding year and is now deemed to be worthless. The entry to record the disposal of the asset is

15,000

Accumulated Depreciation 15,000 Equipment

Sometimes, an asset is fully depreciated but remains in operation. Even though it has completed its estimated useful life for accounting purposes, it may still function for the business. When this occurs, the asset and related accumulated depreciation accounts remain in the ledger to reflect the asset's continued use. Removing them would jeopardize internal accounting controls.

Because the disposal date usually does not coincide with the date when depreciation is recorded, depreciation expense must be brought up to date before writing off the asset. Therefore, before retiring, selling, or trading in the asset, entries must be made for unrecorded depreciation that has accrued since the last depreciation expense was entered.

A \$15,000 asset with accumulated depreciation of \$12,600 had been depreciated at the annual rate of 10 percent. If we decide to discard the asset on April 30, an adjusting entry is needed to record the depreciation for the period January 1 to April 30 (4 months), since no entry to record the expense has been made. Therefore, one-third of the annual depreciation of \$1,500 (\$15,000 × 10%) must be recorded.

Entry 1 Depreciation Expense 500
Accumulated Depreciation 500

This entry is necessary to bring the accumulated depreciation up to date of disposal. The entry to record the disposal of the asset would be

Entry 2 Accumulated Depreciation 13,100
Loss on Disposal of Fixed Asset 1,900
Equipment 15,000

(B) Selling the Asset

Retiring an asset literally means junking it. But a sale, no matter how small, usually involves a cash transaction. If the selling price is greater than the book value (cost less accumulated depreciation), a gain on sale results. If the selling price is less than the book value, there is a loss. If the asset is sold for book value, there is no gain or loss.

The entry to record the sale of an asset is similar to the one for disposal except that an entry must be made to show that compensation (such as cash) has been received. The sale requires entries (1) to bring the depreciation (and hence the book value) up to date, and (2) to record the sale at either a gain (if the selling price exceeds the updated book value) or a loss (if the selling price is below the updated book value).

EXAMPLE 3 Gain on Sale

A \$15,000 asset with accumulated depreciation of \$12,600 as of December 31, and an estimated straight-line life of 10 years, is sold on the following April 30 for \$2,300.

| | Entry 1 Depreciation Expense Accumulated Depreciation | 500* 500 |
|----------------|--|-----------------------------|
| | *1/3 × \$1,500 | |
| Enti | ry 2 Cash | 2,300 |
| | Accumulated Depreciation | 13,100 |
| | Equipment | 15,000 |
| | Gain on Disposal of Fixed Asse | t 400 |
| Proof of gain: | Sale of equipment | \$2,300 |
| | Book value | 1,900 (\$15,000 - \$13,100) |
| | Gain on disposal of fixed assets | \$ 400 |

Gain on disposal of fixed assets would be treated as nonoperating income in the income statement, under the heading "Other Income."

EXAMPLE 4 Loss on Sale

Assume the same information as in Example 3 except that the equipment is sold for \$1,600.

| | Entry 1 Depreciation Expense | 500 |
|----------------|----------------------------------|---------|
| | Accumulated Depreciation | 500 |
| Ent | ry 2 Cash | 1,600 |
| | Accumulated Depreciation | 13,100 |
| | Loss on Disposal of Fixed Assets | 300 |
| | Equipment | 15,000 |
| Proof of loss: | Sale of equipment | \$1,600 |
| | Book value | 1,900 |
| | Loss on disposal of fixed assets | \$(300) |

Loss on disposal of fixed assets would be treated as nonoperating expense in the income statement, under the heading "Other Expense."

(C) Trading the Asset

Instead of either retiring or selling old plant assets, businesses often exchange them for similar assets that are more efficient. This exchange, known as a trade-in, is subtracted from the new asset's price, and the balance that remains (known as the "boot") will be paid based on the terms of the agreement. To record this trade-in, the firm must remove the asset's balance and its related accumulated depreciation account from the books. The trade-in allowance can be greater or less than the book value of the old asset being exchanged. In past years, it was an acceptable practice to recognize the difference between book value and trade-in as a gain or a loss, but today only losses may be recognized.

Nonrecognition of Gain. The way to record a gain from an exchange of similar assets is to absorb it into the cost of the new asset. This requires several steps:

- Step 1. Determine the book value of the old asset by subtracting the up-to-date accumulated depreciation from its cost.
- **Step 2.** Determine the boot (amount to be paid in cash or other assets, such as notes receivable) by subtracting the old asset's trade-in allowance from the new asset's list price.
- **Step 3.** Calculate the depreciable cost (also called "cost basis") of the new asset by adding the book value of the old asset (result of Step 1) to the boot (result of Step 2).

EXAMPLE 5

Data:

| Old Equipment | | New Equipment | | |
|--------------------------------|--------|---------------|------------------------|----------|
| Step 1: | | | Step 2: | |
| Cost of equipment | | \$15,000 | Price of new equipment | \$20,000 |
| Accumulated depreciation as of | | | Trade-in allowance | 2,500 |
| December 31, previous year | 12,600 | | Cash to be paid | \$17,500 |
| Depreciation for the | | | - | |
| current year | 500 | 13,100 | Step 3: | |
| Book value at date of exchange | | \$ 1,900 | Book value | \$ 1,900 |
| | | | Boot | 17,500 |
| | | | New equipment | \$19,400 |

| Entry 1 Depreciation Expense | |
|---|----------|
| Accumulated Depreciation | 500 |
| | 500 |
| Entry 2 Accumulated Depreciation | 13,100* |
| Equipment (new) | 19,400** |
| Equipment (old) | 15,000 |
| Cash | 17,500 |
| *\$12.600 + \$500 **Cost \$20.000 Less: Gain600 | |
| New equipment \$19.400 | |
| Proof of gain: Trade-in | \$2,500 |
| Book value | 1,900 |
| Gain | \$ 600 |

Even though this transaction yields a gain of \$600, generally accepted accounting practices do not permit the business to recognize it. This is based on the concept that income is generated by the sale of items that an asset produces, not from the sale or exchange of the asset itself.

The gain of \$600 that is not recognized will be matched by a reduction of \$600 in total depreciation expense over the life of the equipment, resulting in lower depreciation expense in future years.

Recognition of Loss. If less is received for an old asset than is paid for the new one, the loss may be recognized for accounting purposes, but not for tax purposes. In other words, there is one set of rules for financial statements and another set of rules for tax returns. (Federal income tax law does not permit recognition of either gains or losses from an exchange of similar assets.)

EXAMPLE 6

Using the information in Example 5, assume that the trade-in allowance was \$1,000 instead of \$2,500. The entries that are required would be (1) to bring the depreciation up to date and (2) to record the trade.

| Entry 1 | ntry 1 Depreciation Expense Accumulated Depreciation | | 500 | 500 |
|--------------------------|---|-----------------|--------|--------|
| Entry 2 | Accumulated Day | prodution | 13,100 | |
| Entry 2 | Accumulated Dep | • | ŕ | |
| | Equipment (new) | | 20,000 | |
| | Loss on Disposal | of Fixed Asset | 900* | |
| | Equipment | t (old) | | 15,000 |
| | Cash | | | 19,000 |
| | | | | |
| *Equipme | | \$15,000 | | |
| Accumulated depreciation | | 13,100 | | |
| Book value | | \$ 1,900 | | |
| Trade-in | | -1,000 | | |
| Loss on trade-in | | \$ 900 | | |

Nonrecognition of Loss. Since federal income tax law permits neither gains nor losses on exchanges of similar assets, no "Loss on Trade-In" account may be used for tax purposes, even though it was used

for accounting. The new cost will be determined by adding the boot to the book value of the old equipment.

EXAMPLE 7

Based upon the information in Example 6, if no loss is to be recognized, the entry would be

| Depreciation Expense | 500 | |
|--------------------------|--|---|
| Accumulated Depreciation | | 500 |
| Accumulated Depreciation | 13,100 | |
| Equipment (new) | 20,900* | |
| Equipment (old) | | 15,000 |
| Cash | | 19,000 |
| | Accumulated Depreciation Equipment (new) Equipment (old) | Accumulated Depreciation Accumulated Depreciation 13,100 Equipment (new) 20,900* Equipment (old) |

^{*}Note that the loss of \$900 is added to the cost of the new equipment, which is now recorded for tax purposes as Equipment \$20,900.

Assets Dissimilar in Nature. For trade-ins of assets that are dissimilar, such as the exchange of a truck for a printing press, both gains and losses are recognized.

EXAMPLE 8

A truck that cost \$14,000 and has updated accumulated depreciation of \$10,000 is exchanged for a printing press costing \$15,000. The truck receives a trade-in allowance of \$6,000, with the balance to be paid in cash. What entry is required to record this transaction?

| Step 1: | Cost of truck | \$14,000 |
|---------|---|----------|
| | Less: Accumulated depreciation brought up to date | 10,000 |
| | Book value of truck | \$ 4,000 |
| Step 2: | Cost of printing press | \$15,000 |
| | Less: Trade-in allowance | _6,000 |
| | Cash to be paid (boot) | \$ 9,000 |
| Step 3: | Book value of truck | \$ 4,000 |
| | Less: Trade-in allowance | _6,000 |
| | Gain on trade-in (to be recognized) | \$ 2,000 |

Entry:

| Printing Press | 15,000 | |
|--------------------------|--------|--------|
| Accumulated Depreciation | 10,000 | |
| Truck | | 14,000 |
| Cash | | 9,000 |
| Gain on Trade-In | | 2,000 |

16.2 DEPRECIATION AND INCOME TAXES

(A) Depreciation as an Expense

The four methods of depreciation are really designed for financial accountability rather than for tax purposes. For example, most companies use the straight-line (SL) method on financial statements for creditors and stockholders. But if they elect to use accelerated depreciation for federal income

taxes, they must use different methods. For assets purchased before 1981 that are still in use, the only accelerated methods that may be used are SYD and DDB. (Rules for assets purchased later are explained in this section.) Even though depreciation is an expense that can defer taxes, it is a noncash expense and therefore does not drain cash from business operations.

EXAMPLE 9

Assume that a machine valued at \$60,000 with scrap value of \$6,000 is to be depreciated over 5 years, and that the company's assumed tax rate is 30 percent. Using the data below, determine (a) the net income difference between the SL and SYD methods and (b) the tax savings.

| Straight-Line | Sum-of-the- Years'-Digits |
|------------------|--|
| \$800,000 | \$800,000 |
| -600,000 | -600,000 |
| \$200,000 | \$200,000 |
| _ 10,800* | 18,000** |
| \$189,200 | \$182,000 |
| <u> </u> | - 54,600 |
| <u>\$132,440</u> | \$127,400 |
| | \$800,000 -600,000 \$200,000 - 10,800* \$189,200 - 56,760 |

^{*\$54,000 ÷ 5} years

The procedure would be

| (a) | Net income under SL | \$132,440 |
|-----|-----------------------|-----------|
| | Net income under SYD | -127,400 |
| | Net income difference | \$ 5,040 |
| (b) | Tax savings: | |
| | Income tax under SL | \$56,760 |
| | Income tax under SYD | -54,600 |
| | Tax savings | \$ 2,160 |

(B) Accelerated Cost Recovery System (ACRS)

Although the accelerated methods of depreciation—double-declining-balance and sum-of-the-years'-digits—produce more depreciation expense than straight-line in the early years of an asset's life, many firms wanted even faster write-offs. To meet this demand, in the Economic Recovery Act of 1981, Congress included the Accelerated Cost Recovery System (ACRS). (See Fig. 16-1.) It permitted even faster depreciation write-offs for federal income tax purposes, but only for assets placed into use after 1980. Assets purchased before 1981 were limited to the double-declining-balance or sum-of-the-years'-digits methods. ACRS is easier to compute than double-declining-balance or sum-of-the-years'-digits because it does not recognize scrap value or trade-in or allow partial depreciation for assets bought during the year. Assets purchased under ACRS from 1981 through 1986 were classified according to an estimated recovery period:

Three Years: Autos, light trucks, and machinery used for research.

Five Years: Heavy trucks, ships, aircraft, office furniture and equipment, and any property that does not fall into the other categories.

^{**} $\frac{5}{15}$ × \$54,000

Accelerated Cost Recovery System

| | Period of recovery | | | | |
|---------------|--------------------|-------------|-----------|----------|--|
| Recovery year | 3 years | 5 years | 10 years | 15 years | |
| 1 | 25% | 15% | 8% | 5% | |
| 2 | 38 | 22 | 14 | 10 | |
| 3 | 37 | 21 | 12 | 9 | |
| 4 | and the | 21 | 10 | 8 | |
| 5 | | 21 | 10 | 7 | |
| 6 | | 1987 | 10 | 7 | |
| 7 | | | 9 | 6 | |
| 8 | | | 9 | 6 | |
| 9 | | | 9 | 6 | |
| 10 | | Call Social | 9 | 6 | |
| 11 | | | | 6 | |
| 12 | | | | 6 | |
| 13 | | | | 6 | |
| 14 | | | 24 112 11 | 6 | |
| 15 | | | | 6 | |

Fig. 16-1

Ten Years: Railroad tank cars, residential mobile and prefab homes, and certain public utility property.

Fifteen Years: Other public utility property.

Fifteen-Nineteen Years: Residential and commercial property. (Charts are available from the IRS.)

EXAMPLE 10

A car was purchased in 1984 for \$25,000. The depreciation expense allowed each year under ACRS would be computed as follows:

According to the list above, autos fall in the 3-year class of ACRS. Therefore, the following depreciation expense would be recorded for each year:

 $1984: 25\% \times \$25,000 = \$6,250$ $1985: 38\% \times \$25,000 = 9,500$ $1986: 37\% \times \$25,000 = 9,250$ Total depreciation \$25,000

Keep in mind:

- 1. At the end of 1986 (the third year), the cost of the auto has been fully recovered.
- 2. No scrap value was used.
- 3. Because ACRS allocated depreciation over a much shorter period of time than the asset's true life, it was acceptable only for tax purposes, not for preparing financial statements.

(C) Modified Accelerated Cost Recovery System (MACRS)

Five years after creating ACRS, Congress modified it in the famous Tax Reform Act of 1986. This law permits a Modified Accelerated Cost Recovery System (MACRS) for assets purchased after

December 31, 1986. It kept the four classes of depreciable assets—3-year, 5-year, 10-year, and 15-year—and added four more classes: 7-year, 20-year, 27.5-year, and 31.5-year. It also changed the recovery periods for a number of assets. Cars and light trucks were changed from 3 years to 5 years, and office equipment from 5 years to 7 years. Also, the periods became 7 years for fixtures, equipment, and furniture; 20 years for municipal sewers; 27.5 years for residential rental property; and 31.5 years for nonresidential real property.

In the MACRS table shown in Fig. 16-2, there appears to be an extra year in each class. This extra period is based on "the half-year convention," which assumes that all assets are actually placed in service in the middle of the year and taken out of service in the middle of the year. Thus, neither the first nor the last year of depreciation in any class is considered a full year. An extra year is added to each asset's depreciation expense: A 3-year asset is depreciated over 4 years, a 4-year asset is depreciated over 5 years, and so on.

Modified Accelerated Cost Recovery System Recovery periods

| Recovery year | 3 years | 5 years | 7 years | 10 years | 15 years | 20 years |
|---------------|------------|------------|---------|------------|----------|----------|
| 1 | 33.3% | 20.00% | 14.29% | 10.00% | 5.00% | 3.750% |
| 2 | 44.45 | 32.00 | 24.49 | 18.00 | 9.50 | 7.219 |
| 3 | 14.81 | 19.20 | 17.49 | 14.40 | 8.55 | 6.677 |
| 4 | 7.41 | 11.52 | 12.49 | 11.52 | 7.70 | 6.177 |
| 5 | | 11.52 | 8.93 | 9.22 | 6.93 | 5.713 |
| 6 | | 5.76 | 8.92 | 7.37 | 6.23 | 5.285 |
| 7 | | | 8.93 | 6.55 | 5.90 | 4.888 |
| 8 | | | 4.46 | 6.55 | 5.90 | 4.522 |
| 9 | | | | 6.56 | 5.91 | 4.462 |
| 10 | | | | 6.55 | 5.90 | 4.461 |
| 11 | | | | 3.28 | 5.91 | 4.462 |
| 12 | Legon S | | | Market No. | 5.90 | 4.461 |
| 13 | | | | | 5.91 | 4.462 |
| 14 | | 000 | | | 5.90 | 4.461 |
| 15 | | | | | 5.91 | 4.462 |
| 16 | | Slove land | | | 2.95 | 4.461 |
| 17 | | | | | | 4.462 |
| 18 | | | | No. | | 4.461 |
| 19 | | | | | | 4.462 |
| 20 | Sa effects | | | | | 4.461 |
| 21 | | | | | | 2.231 |

Note: The 27.5-year class for residential rental property and 31.5-year class for nonresidential real property are not included here for reasons of space. Special rules apply to real estate.

Fig. 16-2

EXAMPLE 11

| Year | 3-Year Depreciation Rate* |
|------|---------------------------|
| 1 | 33.33% |
| 2 | 44.45% |
| 3 | 14.81% |
| 4 | 7.41% |
| | 100.00% |

^{*}Spread over four years because of the "half-year convention."

EXAMPLE 12

A truck was purchased in May 1987 for \$25,000. Since the light truck was purchased after December 31, 1986, it falls in the 5-year class of MACRS depreciation. Using the MACRS table in Fig. 16-2, the depreciation would be calculated as follows:

Depreciation Calculations Under MACRS

| Year | Rate | Depreciable Cost | Annual Depreciation Expense |
|---------|--------------|---------------------|-----------------------------|
| 1987 | 20.00% × | \$25,000 = | \$ 5,000 |
| 1988 | 32.00% × | \$25,000 = | 8,000 |
| 1989 | 19.20% × | \$25,000 = | 4,800 |
| 1990 | 11.52% × | \$25,000 = | 2,880 |
| 1991 | 11.52% × | \$25,000 = | 2,880 |
| 1992 | 5.76% × | \$25,000 = | 1,440 |
| Total c | lepreciation | | \$25,000 |

Note that because of the "half-year convention," 5-year depreciation is spread over 6 years.

- 16.7. The four transactions below were selected from the ledger of J. B. Adam regarding the disposal of some of his fixed assets. Depreciation is considered to be recorded only to the end of the prior year. Present journal entries for each transaction. (*Note*: If an item is disposed of before the 15th, do not count the month.)
 - (a) Mar. 3 Discarded four typewriters, realizing no scrap value. Total cost, \$3,000; accumulated depreciation as of Dec. 31, \$2,000; annual depreciation, \$360.
 - (b) Mar. 29 Sold office furniture for cash, \$1,600. Total cost, \$8,000; accumulated depreciation through Dec. 31, \$6,800; annual depreciation, \$600.
 - (c) May 2 Traded in an old automobile for a new one priced at \$4,000, receiving a trade-in allowance of \$1,400 and paying the balance in cash. Data on the old automobile: cost, \$3,900; accumulated depreciation, \$2,700; annual depreciation, \$960.
 - (d) May 5 Traded in dictating equipment costing \$1,000, with \$800 accumulated depreciation as of Dec. 31. The annual depreciation is \$240. Received a trade-in allowance of \$100, paying the balance in cash for a new dictating unit at \$1,400.

16.9. An automobile bought in 1982 for \$28,000 has a scrap value of \$4,000 and an estimated life of 3 years. Determine depreciation expense for each of the 3 years under the Accelerated Cost Recovery System.

| 1982 | |
|------|--|
| 1983 | |
| 1984 | |

SOLUTION

1982:
$$25\% \times $28,000 = $7,000$$

1983: $38\% \times $28,000 = $10,640$
1984: $37\% \times $28,000 = $10,360$
 $$28,000$

16.10. Office furniture purchased for \$10,000 has a scrap value of \$2,000. Determine the depreciation expense for each year under ACRS.

| Year 1 | |
|--------|--|
| 2 | |
| 3 | |
| 4 | |
| 5 | |

SOLUTION

Since this is office furniture, it falls into the 5-year class. Therefore:

Year 1:
$$15\% \times \$10,000 = \$1,500$$

Year 2: $22\% \times \$10,000 = 2,200$
Year 3: $21\% \times \$10,000 = 2,100$
Year 4: $21\% \times \$10,000 = 2,100$
Year 5: $21\% \times \$10,000 = 2,100$
 $\$10,000 = 10,000$

(Scrap value is not considered in the computation under ACRS.)

16.11. A light truck bought in 1994 for \$20,000, with scrap value \$5,000, is to be depreciated under the Modified Accelerated Cost Recovery System. What is the depreciation expense for each year?

| 1994 | | |
|------|---|--|
| 1995 | | |
| 1996 | · | |
| 1997 | | |
| 1998 | | |
| 1999 | | |

SOLUTION

Under MACRS, light trucks were reclassified to a 5-year recovery from the prior 3-year recovery class. The following computation for depreciation is based on figures from the 5-year class (see Fig. 16-2).

(Scrap value is not considered under MACRS.)

- **16.12.** (a) A heavy truck bought in 1983 was purchased for \$40,000. Determine the amount of the write-off each year for tax purposes.
 - (b) A light truck was bought on June 25, 1985, for \$12,000. Compute each year's depreciation for income tax purposes.
 - (c) An asset bought in 1996 for \$21,000 falls in the 3-year class for depreciation. What amount of depreciation will be taken in each year?

| (a) | 1983 |
|-----|------|
| | 1984 |
| | 1985 |
| | 1986 |
| | 1987 |
| (b) | 1985 |
| | 1986 |
| | 1987 |
| (c) | 1996 |
| | 1997 |
| | 1998 |
| | 1999 |
| | |

SOLUTION

(a) Since the heavy truck was purchased in 1983, it falls under the 5-year class of ACRS.

1983:
$$15\% \times \$40,000 = \$6,000$$

1984: $22\% \times \$40,000 = 8,800$
1985: $21\% \times \$40,000 = 8,400$
1986: $21\% \times \$40,000 = 8,400$
1987: $21\% \times \$40,000 = 8,400$
 $8,400$

(b) The year 1985 falls under ACRS. Since the asset is a light truck, it is placed in the 3-year class. Even though the truck was bought in the middle of the year, the figures in the ACRS table are not prorated because under ACRS a business may not take partial depreciation for assets bought during the year. Instead, a smaller percentage depreciation is allowed in the first year on the assumption that the asset was used for less than the full year.

1985:
$$25\% \times \$12,000 = \$3,000$$

1986: $38\% \times \$12,000 = 4,560$
1987: $37\% \times \$12,000 = 4,440$
 $812,000$

(c) Since the asset was bought in 1996, it falls under the Modified Accelerated Cost Recovery System. The table shows four years of figures instead of three because under MACRS all assets are treated as though they were bought in the middle of the first year and sold in the middle of the last year.

```
1996: 33.33\% \times \$21,000 = \$7,000

1997: 44.45\% \times \$21,000 = 9,334

1998: 14.81\% \times \$21,000 = 3,110

1999: 7.41\% \times \$21,000 = 1,556

821,000
```

Examination IV

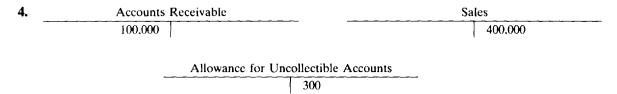

Chapters 12-16

- 1. The total amount of earnings shown on the Jamison Company payroll on April 15 was \$20,000, subject to FICA (7.65 percent). Total payroll deductions included: hospitalization, \$1,000; and pension, \$2,500. Present the general journal entry needed to record this payroll.
- 2. Below is the payroll information for three of the employees of the Ernst Company.

| Employee | Amount Earned to Date | Gross Pay for Week |
|----------|--------------------------|-----------------------|
| Α | \$4,000 | \$100 |
| В | 5,800 | 250 |
| C | 8,000 | 200 |

The company is located in a state that imposes an unemployment insurance tax of 2 percent on the first \$7,000. Federal unemployment tax is 0.8 percent; FICA tax is 7.65 percent. Present the journal entry necessary to record the employer's payroll tax expenses.

3. A 60-day, 12 percent, \$3,000 note received in settlement of an account, dated June 1, is discounted at 12 percent on July 1. What are the entries needed to record the information (a) on June 1? (b) on July 1?

For the balances given above, what is the adjusting entry to record the provision for uncollectible accounts, if the uncollectible expense is estimated as

- (a) One percent of sales?
- (b) \$3,600, by the balance sheet method?
- 5. Transactions for the Blaky Company for the month of January, pertaining to the establishment of a petty cash fund, were as follows:
 - Jan. 1 Established an imprest petty cash fund for \$75
 - Examination of the petty cash box showed: Office Supplies, \$10; Transportation, \$20; Freight, \$15; Charity, \$6; Miscellaneous Expense, \$15

What are the journal entries necessary to record the petty cash information?

- **6.** Based on the following information, (a) prepare a bank reconciliation and (b) journalize the adjusting entries.
 - 1. Balance per bank statement, \$2,121.21

- 2. Checkbook balance, \$3,315.24
- 3. Deposit in transit not recorded by bank, \$788.37
- 4. Outstanding checks:

| Check Number | Amount |
|--------------|----------|
| 312 | \$21.12 |
| 314 | \$131.21 |
| 315 | \$127.22 |
| 317 | \$57.45 |
| 321 | \$9.34 |

- 5. The bank debited the account \$740 for half-payment of a \$1,400 note plus interest. \$700 for principal, \$40 interest.
- 6. A check for \$212.80 for supplies was inadvertently posted as \$221.80
- 7. Bank service charge, \$21
- 7. The Washington Company acquired an asset on January 1, 19X8, at a cost of \$28,000, with an estimated useful life of 10 years and a salvage value of 500. Find the annual depreciation for the first 2 years, using (a) the straight-line method, (b) the sum-of-the-years'-digits method, (c) the double-declining-balance method.
- 8. As of December 31, 19X8, accumulated depreciation of \$10,000 has been recorded on equipment that had originally cost \$15,000. What is the entry to record the disposal of the assets (a) if the equipment was discarded and no funds were received for it? (b) If it was sold for \$8,000?
- 9. Saltman Company traded in an electric motor for a new one priced at \$5,200, receiving a trade-in allowance of \$600 and paying the balance in cash. For the old motor, the cost and accumulated depreciation were \$3,800 and \$3,400, respectively. What is the entry needed to record the acquisition?
- 10. Equipment purchased on July 1, 19X8, for \$5,500 has an estimated scrap value of \$1,000. The equipment will be depreciated the straight-line method for a period of 5 years. The company's fiscal year begins January 1. Show how the equipment and the related accumulated depreciation would appear in the balance sheet on (a) December 31, 19X8, and (b) December 31, 19X9.
- 11. Based on the data above, what amount would appear in the income statement for Depreciation Expense, Equipment (a) for the year 19X8, and (b) for the year 19X9?

Answers to Examination IV

^{11. (}a) \$450 (1/2 year's depreciation)

⁽b) \$900 (1 year's depreciation)

Final Examination

- 1. Journalize the following adjusting data as of December 31:
 - (a) Merchandise inventory, January 1, \$46,000; December 31, \$48,000.
 - (b) Office supplies physically counted on December 31 were \$1,250. The original balance of supplies on hand was \$2,100.
 - (c) Prepaid insurance before adjustment, \$3,850. It was found that \$2,700 had expired during the year.
 - (d) Salaries for a 5-day week ending on Friday were \$3,500. The last payday was on the previous Friday, December 28.
 - (e) The company holds a \$6,000, 9 percent, 60-day note receivable dated December 16 of the year just ended.
- 2. The total payroll for the Madison Bridge Company for the week ending March 30 was \$12,000. Deductions made: \$2,800, federal income tax; \$900, hospitalization; the balance was paid in cash.
 - (a) Present the journal entry to record the payroll, assuming that the FICA tax is 7.65 percent.
 - (b) Present the employer's payroll tax entry, assuming state unemployment tax of 2 percent and federal unemployment tax of 0.8 percent. Of the total payroll, \$5,000 was subject to state and federal unemployment taxes.
- 3. Record the following transactions in the books of Richard Johnson:
 - (a) Sept. 5 Received an \$8,000, 90-day, 12 percent note in settlement of the M. Ribble account and immediately discounted it at 12 percent at the bank.
 - (b) Dec. 4 M. Ribble dishonored the note, and a protest fee of \$2 was imposed.
 - (c) Dec. 31 M. Ribble paid her obligation, including the protest fee.
- 4. Prepare a bank reconciliation statement based on the information below;
 - (a) Bank balance, \$3,400.
 - (b) Checkbook balance, \$3,120.
 - (c) Outstanding checks, \$1,140.
 - (d) Deposits in transit, \$1,800.
 - (e) A \$1,000 note was collected by the bank; interest, \$15; service charge, \$5.
 - (f) A \$16 check was returned for not sufficient funds.
 - (g) Check 12 for \$82 was incorrectly recorded in check stubs as \$28.

5. Inventory information for product 248 is given below:

```
Jan. 1 Balance 15 units @ $10 per unit
Mar. 17 Purchase 12 units @ 11 per unit
Apr. 29 Purchase 8 units @ 12 per unit
Aug. 19 Purchase 12 units @ 14 per unit
Aug. 29 Purchase 5 units @ 16 per unit
Sept. 18 Purchase 6 units @ 20 per unit
```

After taking a physical count, we find that there are 20 units on hand. Determine the ending inventory cost by (a) first-in-first-out; (b) last-in-first-out; (c) weighted average.

- 6. P&C Printing Company traded in its old press for a new one priced at \$18,000, receiving a trade-in allowance of \$1,500 and paying the balance in cash. The old press cost \$12,500 and had accumulated depreciation of \$11,800. (a) What is the entry to record the acquisition of the new machine? (b) What entry would be needed if the trade-in had been only \$500?
- 7. The abbreviated income statement of Fran and Robert for December 31, 19X8, appears below:

| Sales (net) | \$240,000 |
|--------------------------|-----------|
| Less: Cost of Goods Sold | 105,000 |
| Gross Profit | \$135,000 |
| Less: Expenses | 65,000 |
| Net Income | \$ 70,000 |

The profit and loss agreement specifies that

- 1. Interest of 5 percent is to be allowed on capital balances (Fran, \$25,000; Robert, \$15,000).
- 2. Salary allowances to Fran and Robert are to be \$6,000 and \$4,000, respectively.
- 3. A bonus equal to 20 percent of net income is to be given to Fran without regard to interest or salary.
- 4. Remaining profits and losses are to be divided in the ratio of capital balances. (a) Present the distribution of net income. (b) Present the journal entry required to close the books.
- 8. The trial balance on the work sheet of the Roseman Corporation as of December 31 is as follows:

Roseman Corporation Work Sheet Year Ended December 31, 19X8

| | Trial Balance | | Adjustments | | Income Statement | | Balance Sheet | |
|-----------------------|---------------|---------|-------------|-----|------------------|-----|---------------|-------------|
| Account Title | Dr. | Cr. | Dr. | Cr. | Dr. | Cr. | Dr. | Cr. |

| Insurance Expense | | | | | | | | - |
| Deprec. Expense | | | | | | | | |
| Salaries Payable | | | | | | | | |
| Net Income | | | | | | | | |

- (a) Prepare an eight-column work sheet, using the following additional information for year-end adjustments: (1) merchandise inventory on December 31, \$42,000; (2) supplies inventory, December 31, \$4,000; (3) insurance expired during the year, \$2,000; (4) depreciation for the current year, \$800; (5) salaries accrued at December 31, \$400.
- (b) Prepare all necessary adjusting and closing entries.
- (c) Prepare the income statement, the retained earnings statement, and the balance sheet for the Roseman Corporation.
